**164 Foreword**

165 ISO (the International Organization for Standardization) is a worldwide federation of national  
166 standards bodies (ISO member bodies). The work of preparing International Standards is  
167 normally carried out through ISO technical committees. Each member body interested in a  
168 subject for which a technical committee has been established has the right to be represented on  
169 that committee. International organizations, governmental and non-governmental, in liaison with  
170 ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical  
171 Commission (IEC) on all matters of electrotechnical standardization.

172 International Standards are drafted in accordance with the rules given in the ISO/IEC Directives,  
173 Part 2.

174 ISO 26000 was prepared by the ISO Technical Management Board Working Group on Social  
175 Responsibility. The Draft International Standard adopted by the Working Group will be circulated  
176 to the member bodies for voting. Publication as an International Standard requires approval by at  
177 least 75 % of the member bodies casting a vote.

178 Attention is drawn to the possibility that some of the elements of this document may be the  
179 subject of patent rights. ISO shall not be held responsible for identifying any or all such patent  
180 rights.

181 The main task of technical committees is to prepare International Standards.

## Introduction

*Note to IDTF: The IDTF should consider all TG4 text in conjunction with TG4 N0070, which provides the most recent set of comments by TG4 experts on an earlier version of this text, and identifies a number of areas of remaining disagreement.*

*Note to IDTF: The text on Introduction has been amended and approved by TG4 experts based on a careful review of all written comments on WD3. Further changes to this clause should not be required, other than to review the clause for accuracy in the context of any later changes to the rest of the document, especially as regards Table 1 below. The IDTF is invited to consider the possibility of replacing Table 1 with a diagram 'road map' on how to use this standard.*

Organizations around the world, as well as their stakeholders, are becoming increasingly aware of the need for socially responsible behaviour. As varying interpretations of social responsibility exist, an internationally accepted standard may be of benefit in helping to achieve a common perspective and understanding about the principles and practices of social responsibility. The aim of social responsibility is to contribute to sustainable development, including the welfare of society.

Social responsibility is increasingly becoming one of the important influences on an organization's performance. More than ever, an organization's performance in relation to the social environment in which it operates, and its impact on the natural environment, has become a critical part of measuring its overall performance, and its ability to continue operating effectively. That is, in part, a reflection of the growing recognition of the need for ensuring healthy ecosystems, social equality and organizational governance.

Organizations are subject to greater scrutiny by their various stakeholders, including customers, workers and their trade unions, members, the community, non-governmental organizations, students, financiers, donors, investors, companies and other commercial entities. The perception of an organization's social responsibility performance may influence:

- the general reputation of the organization;
- its ability to attract and retain workers and/or members;
- the maintenance of employee's morale and productivity;
- the view of investors, donors, sponsors and the financial community;
- its ability to attract and retain customers, clients, members or users; and
- its relationship with government, the media, suppliers, peers, customers and the community in which it operates.

This international standard provides guidance on the underlying principles of social responsibility, the issues pertaining to social responsibility and on ways to implement social responsibility within an organization. The standard is applicable to all type of organizations, regardless of their size or location, including governmental and non-governmental organizations as well as business organizations, because every organization has an impact on society and the environment. It is intended to help an organization achieve mutual trust with its stakeholders by improving its social responsibility performance. This standard does not, however, apply to governmental organizations when exercising their executive, legislative and judicial powers.

This standard is for voluntary use and is not intended for certification purposes, or regulatory or contractual use. It is not intended to create a non-tariff barrier to trade, nor does it alter an organization's legal obligations. *(Note to IDTF: this replicates text in Scope – should reference only be made once?)*

226 Every organization is encouraged to become more socially responsible by using this standard,  
 227 engaging with stakeholders, complying with applicable national laws, and respecting the  
 228 principles of internationally recognized conventions and other authoritative inter-governmental  
 229 instruments.

230 This standard seeks the integration of socially responsible behaviour into existing organizational  
 231 strategies, systems, practices and processes, and emphasizes results and improvements in  
 232 performance.

233 Although the standard is meant to be read and used as a whole, readers looking for specific  
 234 types of information on social responsibility may find the following outline useful.

235 **Table 1 — Outline of Contents of ISO 26000**

Clause title	Clause number	Description of Clause contents
Scope	Clause 1	Defines the subjects covered by the standard and identifies any limitations or exclusions.
Normative references	Clause 2	Lists documents that must be read in conjunction with the standard.
Terms and Definitions	Clause 3	Identifies and provides the meaning of important terms used in this standard. These terms are of fundamental importance for understanding the concept of social responsibility and using the standard.
The context of social responsibility in which an organization operates	Clause 4	Describes the factors, conditions and important issues that have influenced the development of social responsibility and that continue to affect its nature and practice. It also describes the concept of social responsibility itself - what it means and how it applies to organizations.
Principles of social responsibility	Clause 5	Introduces fundamental principles of socially responsible behaviour.
Guidance on social responsibility core issues	Clause 6	Explains the core issues involved in social responsibility, organizational governance, human rights, labour practices, the environment, fair operating practices, consumer issues and development of the community and society, and for each core issue provides a rationale, principles and considerations, description of the issues, as well as related actions and/or expectations.
Guidance for an organization on implementing social responsibility	Clause 7	Provides practical guidance on integrating social responsibility in an organization and on implementation of social responsibility as a whole, including the specific issues identified in Clause 6.
Bibliography		Includes references that may be useful in understanding and implementing social responsibility in an organization.

236

237 Reference to any standard, code or other initiative in this standard does not imply that ISO  
 238 endorses or gives special status to that standard, code or initiative.

239 This standard was developed in a multi-stakeholder process involving experts from around 80  
240 countries covering six different stakeholder groups: Consumers; Government; Industry; Labour;  
241 Non-governmental Organizations (NGOs); and Service, Support, Research and Others. Efforts  
242 were made to achieve transparency and broad participation of the different stakeholder groups.  
243 In addition, specific provision was made for encouraging the participation of developing countries  
244 and providing a gender balance in drafting groups.

245 Bracketed numbers in the text refer to the number of the cited reference in the Bibliography.

246 *Note to IDTF: above table to be updated pending finalisation of the standard. IDTF to consider a*  
247 *diagram.*

248

## 249 **Guidance on Social Responsibility** Guidance on Social Responsibility —

### 250 **1 Scope**

251 *Note to IDTF: The following text on Scope has been amended and approved by TG4 experts based*  
252 *on a careful review of all written comments on WD3. Further changes to this clause should not be*  
253 *required, other than to review the clause for accuracy in the context of any later changes to the rest of*  
254 *the document.*

255 This International Standard provides guidance to all types of organizations, regardless of their size or  
256 location, on:

- 257 — concepts, terms and definitions relating to social responsibility;
- 258 — the context of social responsibility in which an organization operates;
- 259 — principles and issues relating to social responsibility;
- 260 — integrating, implementing and promoting socially responsible behaviour throughout the  
261 organization and its sphere of influence; (*Note to IDTF: differing opinions remain on reference to*  
262 *“sphere of influence” throughout the standard.*)
- 263 — identifying and engaging with stakeholders;
- 264 — communicating commitments and performance related to social responsibility; and hence
- 265 — contributing to sustainable development, including the welfare of society.

266 This standard encourages an organization to undertake activities that go beyond legal compliance,  
267 recognizing that compliance with law is an important part of any organization's social responsibility.

268 It is intended to promote common understanding in the field of social responsibility.

269 It complements other instruments and initiatives related to social responsibility.

270 The application of this standard may take into consideration societal, environmental, legal and  
271 organizational diversity, as well as differences in economic conditions, while observing international  
272 norms of behaviour. (*Note to IDTF: the nature of reference to “international norms of behaviour” (if*  
273 *any) is subject to further clarity on this issue*)

274 This standard is not a management system standard. It is not intended for certification purposes or  
275 regulatory or contractual use.

### 276 **2 Normative references**

277 *Note to IDTF: This section is for a list of documents, if any, that must be read in conjunction with the*  
278 *standard. Not currently assigned to a Task Group; to be developed later.*

### 279 **3 Terms and definitions**

280 The following terms and definitions apply to this standard.

- 281 **3.1**  
282 **accountability**  
283 allocation or acceptance of responsibility for decisions and actions by an organization to its governing  
284 bodies, legal authorities, and, more broadly, its other stakeholders
- 285 **3.2**  
286 **consumer**  
287 individual member of the general public purchasing or using goods, property or services for private  
288 purposes
- 289 **3.3**  
290 **corruption**  
291 abuse of entrusted power for illegitimate gain
- 292 **3.4**  
293 **environment**  
294 surroundings in which an organization operates, including air, water, land, natural resources, flora,  
295 fauna, humans, and their interrelation  
296 NOTE: Surroundings in this context extend from within an organization to the global system [ISO 14001: 2004]
- 297 **3.5**  
298 **environmental impact**  
299 any change to the environment, whether adverse or beneficial, wholly or partially resulting from an  
300 organization's activities  
301 [adapted from ISO 14001: 2004]
- 302 **3.6**  
303 **ethical behaviour**  
304 behaviour that is in accordance with accepted principles of right or good conduct in the context of a  
305 particular situation, and consistent with international [norms] [expectations] of behaviour  
306 *Note to IDTF: This definition will be revisited pending the outcome of further work on the issue of*  
307 *international norms within the IDTF. Note comments in TG4 N0070.*
- 308 **3.7**  
309 **international [expectations] [norms] of behaviour**  
310 [expectations] [norms] that are universally, or nearly universally recognized, and based on  
311 international norms and intergovernmental instruments that have been developed through a widely  
312 representative dialogue process that gives them legitimacy  
313 *Note to IDTF: This definition will be revisited pending the outcome of further work on the issue of*  
314 *international norms within the IDTF.*
- 315 **3.8**  
316 **issue of social responsibility**  
317 a specific item that can be acted upon to seek favourable outcomes for the organization and/or its  
318 stakeholders
- 319 **3.9**  
320 **material**  
321 of sufficient relevance and significance to influence the decisions of an organization and/or the  
322 assessments of its stakeholders
- 323 **3.10**  
324 **material issue**  
325 issue that is of sufficient relevance and significance to influence the decisions of an organization  
326 and/or the assessments of its stakeholders
- 327 **3.11**  
328 **organizational governance**  
329 system by which an organization makes and implements decisions in pursuit of its objectives

- 330 **3.12**  
 331 **principle**  
 332 fundamental belief that guides or influences decision-making or behaviour
- 333 **3.13**  
 334 **product**  
 335 article or substance that is offered for sale or is part of a service delivered by an organization
- 336 **3.14**  
 337 **service**  
 338 action of an organization to meet a demand or need
- 339 **3.15**  
 340 **social responsibility**  
 341 responsibility of an organization for the impacts of its decisions and activities on society and the  
 342 environment, through transparent and ethical behaviour that
- 343 — is consistent with sustainable development, including the welfare of society;
- 344 — takes into account the expectations of stakeholders;
- 345 — is in compliance with applicable law and consistent with international [norms] [expectations] of  
 346 behaviour; and
- 347 — is integrated throughout the organization and practiced in its relationships.
- 348 NOTE Activities include products, services and processes
- 349 NOTE Relationships refer to an organization's activities within its sphere of influence
- 350 *Note to IDTF: This definition will require specific further consideration. Note e.g. comments in TG4*  
 351 *N0070.*
- 352 **3.16**  
 353 **socially responsible**  
 354 consistent with social responsibility
- 355 **3.17**  
 356 **sphere of influence**  
 357 the spatial or functional area across which an organization has the ability to affect decisions or activities
- 358 **3.18**  
 359 **stakeholder**  
 360 individual or group that has an interest in any activities or decisions of an organization
- 361 **3.19**  
 362 **stakeholder engagement**  
 363 any activity or activities undertaken by an organization to create opportunities for dialogue between  
 364 the organization and one or more of its stakeholders, with the aim of providing an informed basis for  
 365 the organization's decisions
- 366 **3.20**  
 367 **supply chain**  
 368 those involved in upstream processes and activities that deliver products and/or services
- 369 **3.21**  
 370 **sustainable development**  
 371 development that meets the needs of the present without compromising the ability of future  
 372 generations to meet their own needs

NOTE: this involves addressing economic, social and environmental factors and their interdependence in an organisation's decision-making and activities

### **3.22**

#### **transparency**

openness about actions and impacts, and willingness to communicate these in a clear, accurate and complete manner

### **3.23**

#### **value chain**

those involved, both downstream and upstream of an organization, in processes and/or activities that deliver or receive value in the form of products or services

### **3.24**

#### **welfare of society**

health, well-being and prosperity of society

## **4 The context and concept of social responsibility**

This clause provides guidance on the development of social responsibility and the factors that affect its nature and development. It also identifies some important considerations about the role of stakeholders in social responsibility and the application of this standard to government.

### **4.1 The context of social responsibility**

This section describes the context in which the social responsibility has developed and is still developing.

#### **4.1.1 Historical background**

The term social responsibility came into widespread use in the early 1970s, although various aspects of social responsibility were the subjects of action by organizations and governments as far back as the late 19th century, and in some instances even earlier.

The attention to social responsibility has in the past primarily focused on business. The term 'corporate social responsibility' is still more familiar to most people than 'social responsibility', and even where 'social responsibility' or 'socially responsible' is used, as in 'socially responsible investment', it is mostly related to activities of business.

The view that social responsibility is applicable to all organizations has emerged as different types of organizations, not just those in the business world, recognized that they too had responsibilities for the environment and the welfare of society, and for contributing to sustainable development.

#### **4.1.2 Changing scope of social responsibility**

Social responsibility exists within the context of society. The issues that make up social responsibility reflect the expectations of society at a particular time, and are therefore ever-changing, as society's concerns and its expectations of organizations change to reflect those concerns.

Issues such as labour practices and fair operating practices emerged a century or more ago. In the early 20th century, philanthropic activities of some organizations became more than individual acts of charity and aimed to benefit society more broadly. Other issues, such as human rights, the environment and consumer protection were added over time when these issues received greater attention in the community.

413 The core issues identified in this standard reflect a view of good practice at the time this standard is  
 414 drafted. They will undoubtedly change in the future, and additional issues may come to be seen as  
 415 important elements of social responsibility.

#### 416 **4.1.3 Current trends in social responsibility**

417 A number of factors are contributing to expanded interest in the social responsibility of organizations.

418 Globalization, greater ease of travel, and the availability of instant communications mean that  
 419 individuals and organizations around the world are finding it easier to know about the activities of  
 420 organizations both nearby and in distant locations. This provides the opportunity for organizations to  
 421 benefit from learning about new ways of doing things and solving problems. It also means that  
 422 organizations' activities are subject to increased scrutiny by a wide variety of groups and individuals.  
 423 Policies or practices applied by an organization in different locations can be readily compared.

424 The global nature of some environmental and health issues and recognition of worldwide  
 425 responsibility for combating poverty mean that the issues relevant to an organization may extend well  
 426 beyond those in the immediate area in which it is located. Documents such as the Rio Declaration on  
 427 Environment and Development, the Johannesburg Declaration on Sustainable Development and the  
 428 Millennium Development Goals emphasize this worldwide interdependence.

429 Over the past several decades, globalization has resulted in an increase in the power and influence of  
 430 the private sector and a relative weakening of the role of the public sector in developed countries. The  
 431 changing role of government has also seen the private sector and NGOs become the providers of  
 432 many services previously offered by government. One consequence of this is that consumers, through  
 433 their purchasing decisions, can have an increasing impact on society and the environment. These  
 434 changes have led to closer scrutiny of the activities and policies of organizations. The situation in  
 435 many developing countries is somewhat different. Governments in many of these countries have  
 436 historically been weak, and private sector organizations have often provided services in areas such as  
 437 health, education and welfare. As the capability of some developing country governments expand, the  
 438 roles of government and private sector organizations are undergoing change.

439 Community expectations about the performance of organizations continue to grow. There are growing  
 440 demands for organizations to be accountable to the community and other stakeholders. 'Community  
 441 right to know' legislation in many places gives people access to detailed information about the  
 442 operations of some organizations. A growing number of organizations now publish annual  
 443 sustainability reports to meet stakeholders' requirements for information about their performance.

444 These factors and others form part of the context for social responsibility today and contribute to the  
 445 call for organizations to demonstrate their social responsibility.

#### 446 **4.2 The concept of social responsibility**

447 This section identifies some important considerations for organizations to keep in mind when  
 448 considering the relevance of social responsibility to their organization's activities.

##### 449 **4.2.1 Characteristics of social responsibility**

450 The elements of social responsibility reflect the expectations of society. Although the expectations of  
 451 responsible behaviour will vary between countries and cultures, organizations should recognize and  
 452 accept the universally applicable values. These expectations are reflected in international conventions  
 453 and norms of behaviour established through authoritative intergovernmental instruments such as the  
 454 Universal Declaration on Human Rights. They may be reflected in national and local laws. Respect for  
 455 the rule of law and compliance with legally binding obligations are fundamental parts of social  
 456 responsibility.

457 Important characteristics of social responsibility are:

458 — accountability for the organization's impact on society

459 — engagement with stakeholders

460 — contribution to sustainable development

#### 461 **4.2.1.1 Accountability for the organization's impact on society**

462 An essential characteristic of social responsibility is the willingness of an organization to take  
463 responsibility and be accountable for the impacts its activities create on society and the environment.  
464 Clauses 6 and 7 describe different types of impacts and the manner in which an organization should  
465 address them as part of social responsibility.

#### 466 **4.2.1.2 The role of stakeholders in social responsibility**

467 Engagement with stakeholders is a central aspect of social responsibility. Organizations should  
468 engage with their stakeholders to identify the stakeholders' expectations and to assist in developing  
469 ways of responding to stakeholders' needs. Guidance on identifying an organization's stakeholders  
470 and on communicating and engaging with them is provided in Clause 7.

471 Stakeholders can help an organization identify the relevance of issues to the activities of the  
472 organization. But stakeholders do not replace broader society in determining norms of behaviour, so a  
473 particular issue may be relevant to the social responsibility of an organization even if not specifically  
474 identified by the stakeholders it consults. Guidance on the core issues of social responsibility are  
475 provided in Clause 6.

#### 476 **4.2.1.3 Contribution to sustainable development**

477 Another of the central characteristics of social responsibility is the contribution of the organization to  
478 sustainable development. Clause 6 describes ways in which an organization should address a range  
479 of issues that contribute to sustainable development.

480 It is important to note that sustainable development is a fundamentally different concept than the  
481 sustainability or ongoing viability of an individual organization. Sustainable development refers to  
482 meeting society's needs in a manner that allows future generations to meet their needs. The  
483 sustainability of an individual organization may or may not be compatible with sustainable  
484 development, depending on the way the organization is conducted and managed.

#### 485 **4.2.2 Governments and social responsibility**

486 Although ISO 26000 is applicable to all organizations, there are some roles of government that are not  
487 covered by this standard. The government of a country (the state) as a political institution and  
488 lawmaker, as directed by the country's citizens, is not addressed by this standard. The state has the  
489 role of ensuring that rights are respected. Only political decisions can determine what activities should  
490 be undertaken by government or be subject to legally binding regulation.

491 Many of the activities of government organizations, created to act on behalf of the state, are however  
492 covered by this standard. Issues such as labour practices, environmental protection and other core  
493 issues described in Clause 6 are applicable to such organizations.

### 494 **5 Principles of Social Responsibility**

495 In approaching and practising social responsibility, the overarching goal for an organization is to  
496 maximise its contribution to sustainable development. In so doing, the following principles should be  
497 recognized and observed. These principles are generic in nature and should be applied consistently  
498 by an organization throughout its policy- and decision-making and in its activities. An organization  
499 should use its best endeavours to apply these principles.

Where observance of any of the following principles would bring the organization into conflict with international [expectations] [norms] of behaviour, the organization may choose to take lawful action to influence laws and regulations to bring them into conformity with these international [expectations] [norms]. An organization that seeks to take unfair advantage of such a situation, is considered not to be socially responsible.

*Note to the IDTF: it was agreed in TG4 that this Clause should focus on identifying the key elements relating to each principle and that aspects relating to the implementation of the principle be addressed in Clause 7 of the Standard. The previous text on Principles (WD3) that related to the implementation of each principle should be considered when reviewing the guidance provided in Clause 7. In addition, TG4's work on this clause has been undertaken on the understanding that the value of this clause would be revisited at a later stage in the process.*

## **5.1 Principle of ethical behaviour**

An organization's behaviour should be based on the ethics of honesty, equity, stewardship and integrity. From these ethics come a concern for others and the environment, and a commitment to address stakeholders' interests.

## **5.2 Principle of respect for the rule of law**

An organization should respect the rule of law and comply with all applicable laws and regulations. This implies taking steps to be aware of applicable laws and regulations, and ensuring that these are communicated and observed within the organization.

## **5.3 Principle of respect for international [norms] [expectations] of behaviour**

An organization should respect international [norms] [expectations] of behaviour.

*Note to IDTF: the final nature and wording of this principle will be informed by the outcome of further discussions.*

## **5.4 Principle of respect for and consideration of stakeholder interests**

An organization should recognize and accept that a range of stakeholders may have interests in its activities. An organization should respect and consider these interests.

## **5.5 Principle of accountability**

An organization should accept appropriate scrutiny and should recognize the duty to respond to this scrutiny. An organization should disclose and justify to its stakeholders, in a clear, balanced and truthful manner and to a reasonable and sufficient degree, the policies, decisions and activities for which it is responsible, including the effects these have had or could have on society.

## **5.6 Principle of transparency**

An organization should disclose to its stakeholders, as appropriate, information related to sustainable development, including the welfare of society.

## **5.7 Principle of the precautionary approach**

*Note to IDTF: This principle remains the subject of some disagreement and will require further specific consideration within the IDTF (see e.g. comments in TG4N0071). In addition, the final nature and wording of this principle may need to be reviewed pending the outcome of a review of the WTO TBT issue.*

539 Organizations should support a precautionary approach to environmental challenges. Where there are  
540 threats of serious or irreversible damage, lack of full scientific certainty should not be used as a  
541 reason for postponing cost-effective measures to prevent environmental degradation.

## 542 **5.8 Principle of respect for human rights**

543 An organization should respect the rights set out in the Universal Declaration of Human Rights.

## 544 **6 Guidance on social responsibility core issues**

545 *Note to IDTF: Clauses 6.2-6.8 should be read in conjunction with the final reports of the relevant TG5*  
546 *drafting team.*

### 547 **6.1 General**

548 To assess its social responsibility, an organization should consider the following core issues:

- 549 — organizational governance;
- 550 — human rights;
- 551 — labour practices;
- 552 — the environment;
- 553 — fair operating practices;
- 554 — consumer issues; and
- 555 — development of the community and society.

556 Each of these core issues includes a range of issues that are described in this clause including the  
557 corresponding principles and considerations, expectations and/or related actions. In this document, an  
558 issue is defined as a specific item that can be acted upon to seek favourable outcomes for the  
559 organization and/or its stakeholders”.

560 **NOTE** Other issues may appear in the future as social responsibility is dynamic and reflects the  
561 evolution of the social and environmental concerns.

562 Economic aspects, health and safety and supply chain are dealt with throughout the seven core  
563 issues, where relevant.

564 Dealing with these core issues should be based on the principles of social responsibility (See Clause  
565 5).

566 An organization should identify and address all those issues that are material and appropriate to its  
567 activities.

568 Although most of the core issues are interrelated and complementary, it is recognized that the nature  
569 of organizational governance is different. Organizational governance describes the decision making  
570 process and oversight facilitates action on the other core issues.

571 There is no pre-determined order in which an organization should address these core issues; this will  
572 vary with the organization and its strategy.

573 An organization should yet look at the issues holistically, that is, consider the whole system rather  
574 than just concentrate on individual components, and understand how these issues relate to and

influence each other. It should do so in a manner that does not create adverse impacts on its supply chain and/or the life cycle of its products/services.

**Figure 1 — Seven core issues at a glance**

## 6.2 Organizational governance

### 6.2.1 Rationale

Organizational governance is the system by which an organization makes and implements decisions in pursuit of its objectives. Depending on the type of organization, these objectives may be defined by the organization's members, owners, constituents or others.

Governance systems may vary, depending on the size and type of organization and the economic, political, cultural and social contexts in which it operates. Although, governance processes and structures take many different forms, both formal and informal, all organizations make and implement decisions within a governance system. The governance system within an organization is directed by the person or group of persons having the authority and responsibility for pursuing the organization's objectives.

This section sets out the principles and considerations that can improve the effectiveness of organizational governance, this will:

- enable the organization to take into account its impacts on society and sustainable development;
- enable better decisions that are more easily implemented;
- improve the organizations performance in relation to its objectives;
- allow better identification and management of risks and opportunities;
- improve the organizations relationship with its stakeholders; and
- by fostering legitimacy, leads to decisions that are more likely to have the support and confidence of those implementing them and those who may be affected.

**6.2.2 Principles and considerations**

Effective governance is based on incorporating the principles from clause 5 into decision-making and implementation. An organization should develop specific governance processes and structures to apply the principles in clause 5, including the development of a set of values to be applied across the organization.

**6.2.3 Organizational governance issue 1: Compliance with laws and regulations**

**6.2.3.1 Description of the issue**

Compliance with laws and regulations is the minimum responsibility of all organizations, and so the most important objective of organizational governance is to be confident that the organization complies with all applicable laws and regulations. Some jurisdictions also impose particular governance obligations for specific types of organizations.

**6.2.3.2 Related actions and/or expectations**

Organizations should establish a culture of compliance and take steps to:

- comply with legal and regulatory requirements in all jurisdictions in which the organization operates;
- comply with its own by-laws, policies, rules and procedures and apply them fairly and impartially;
- recognize the legal rights and legitimate interests of stakeholders;
- remain informed of all legal obligations; and
- periodically review its compliance.

**6.2.4 Organizational governance issue 2: Enhancing accountability**

**6.2.4.1 Description of the issue**

Accountability is the state of being answerable to the controlling interests of an organization, to legal authorities, and, more broadly to society at large. For example, elected representatives are accountable to their constituents; private organizations are accountable to their owners; associations and representative organizations are accountable to their members; public institutions are accountable to the citizens of the country and publicly-listed companies are accountable to their shareholders. All are accountable, depending on the type of organization, to specific other stakeholders on how they uphold the principles of social responsibility.

An organization should also be accountable to stakeholders who are impacted by the organization's decisions and actions. While those with governance responsibility will act on behalf of the stakeholders to whom the organization is directly accountable, these actions may also impact other stakeholders in different ways.

Accountability increases the likelihood that the responsibilities that have been conferred will be carried out in the manner intended. It also increases the fairness of decisions and actions, because those with ultimate accountability are likely to take greater care for the quality of their decisions and oversight.

Accountability also encompasses accepting responsibility where wrongdoing has occurred, and taking action to prevent it from being repeated.

636 **6.2.4.2 Related actions and/or expectations**

637 An organization has the responsibility to account for:

- 638 — the proper and efficient use of human, financial and natural resources;
- 639 — the performance of the organization;
- 640 — decisions and actions within the scope of the organization's authority and consistent with its  
641 objectives;
- 642 — the results of the organization's decisions, including significant consequences, even if they were  
643 unintended or unforeseen;
- 644 — the definition of the roles, responsibilities, accountabilities and authorities across the different  
645 functions in the organization concerning how decisions will be made, implemented and reviewed;  
646 and
- 647 — the significant impacts of the organization's decisions and actions on stakeholders.

648 **6.2.5 Organizational governance issue 3: Being transparent**

649 **6.2.5.1 Description of the issue**

650 An organization should be transparent regarding its governance and performance provided that:

- 651 — truly proprietary information is protected; and
- 652 — it would not breach legal obligations

653 **6.2.5.2 Related actions and/or expectations**

654 Being transparent means that:

- 655 — the standards and criteria against which the organization evaluates its own performance are  
656 clearly communicated;
- 657 — information is freely available to and directly accessible by those who have been, or may be,  
658 affected in significant ways by the decisions of the organization;
- 659 — information provided is timely, factual, does not omit material information; and
- 660 — information is presented in a clear and objective manner to enable constituents, owners, members  
661 and other stakeholders to accurately assess the impact that the decisions or actions of the  
662 organization have on their interests.

663 **6.2.6 Organizational governance issue 4: Promoting ethical conduct**

664 **6.2.6.1 Description of the issue**

665 An organization's stakeholders – its members, owners, constituents and others – will expect the  
666 organization to conduct its activities in an ethical manner. Organizations should develop governance  
667 structures that help to promote ethical conduct inside the organization and in its interactions with  
668 others.

**6.2.6.2 Related actions and/or expectations**

Organizations should actively promote ethical conduct by:

- Defining and communicating the standards of ethical behaviour required of all personnel and particularly those that have the opportunity to significantly influence the integrity, strategy and operation of the organization;
- Encouraging and promoting the observance of standards of ethical behaviour
- Minimizing conflicts of interest throughout the organization;
- Establishing oversight mechanisms and controls to monitor and enforce ethical behaviour;
- Establishing mechanisms to enable internal and external stakeholders to report violations of ethical standards without fear of reprisal; and
- Recognizing and addressing situations where local laws and regulations do not exist or conflict with ethical behaviour.

**6.2.7 Organizational governance issue 5: Responding to Stakeholders**

**6.2.7.1 Description of the issue**

Although an organization's objectives may be limited to the interests of its respective owners, members or constituents, other stakeholders may also have rights or interests that should be taken into account.

**6.2.7.2 Related actions and/or expectations**

An organization's governance process should enable it to identify and address stakeholders' rights and interests by:

- Being conscious of and respecting the interests and needs of the organization's stakeholders and their relative capacity to contact and engage with the organization;
- Directing the organization toward a long-term perspective, balancing the immediate needs and objectives of its current stakeholders with the interests of future generations;
- Balancing the organization's objectives against the impacts on and risks to all its stakeholders
- Engaging stakeholders who may be, or have been, affected by its decisions; and
- Considering the views of stakeholders that may be affected by a decision even if they have no formal role in the governance of the organization.

**6.3 Human rights**

**6.3.1 Rationale**

Human Rights are the basic rights inherent to all of each human beings, irrespective of their race, sex, national or ethnic origin, colour, religion, language, political opinion, social status, or any other status, to live in freedom from want and fear and in dignity. The Universal Declaration of Human Rights (UDHR) – born out of the ashes of the devastation and mass-murder caused by an ideology of discrimination and suppression of individual rights – together with the subsequent international conventions spelling out in more detail the content of the rights contained in the UDHR, rests on the founding principle of the inherent dignity of all members of the human family. Human rights as outlined

706 in the UDHR, the international conventions and international customary law, form part of international  
 707 law. The rights are considered inalienable, meaning that they cannot be denied, under any  
 708 circumstances, even with an individual's consent. Human rights are universal, which means that they  
 709 apply everywhere and enjoy universal protection across boundaries and civilization. Recognising both  
 710 the universal nature of the rights, and also that their realisation requires the involvement of local as  
 711 well as global actors, all organs of society can contribute to the protection of the rights contained in  
 712 the Declaration.

713 Although different categories of human rights can be distinguished, the enjoyment of any specific right  
 714 or group of rights will require that other rights or groups of rights are also respected. The rights are  
 715 inter-related, interdependent and indivisible; this means that a person who enjoys some of these rights,  
 716 but is deprived of others, does not live a life in dignity as guaranteed by the international human rights  
 717 law. Similarly, the infringement of a particular human right will inevitably have a negative impact on a  
 718 range of other rights causing their violations. For example, a person who has not enjoyed the right to  
 719 education, may not enjoy the right to participate in an informed matter in political processes. Likewise,  
 720 a person who is denied her right to the highest attainable standard of health, may in fact be denied the  
 721 right to life.

722 Human rights entail both rights and obligations. States assume obligations and duties under  
 723 international law to respect, to protect and to fulfil human rights within their jurisdiction. The obligation  
 724 to respect means that States must refrain from interfering with or curtailing the enjoyment of human  
 725 rights. The obligation to protect requires States to protect individuals and groups against human rights  
 726 abuses. The obligation to fulfil means that States must take positive action to facilitate the enjoyment  
 727 of basic human rights. States have to report regularly on the human rights situations and on the  
 728 measures taken to fulfil their obligations. The States have the responsibility to secure respect for  
 729 human rights. The UDHR, calls on every individual and organs of society to strive to promote respect  
 730 for these rights and freedoms by progressive measures to secure their universal recognition and  
 731 observance among peoples. Hence, an organization has a responsibility to safeguard the observation  
 732 of human rights in its activities as well as within its sphere of influence. Additionally, all organizations  
 733 have the potential to affect the enjoyment of human rights, directly or indirectly. There is therefore a  
 734 strong moral and ethical reason for which organizations should support, embrace and respect human  
 735 rights, independently and irrespectively of whether States fulfil their obligations under international law.

736 International law binds states. However, there are some fundamental principles of international law  
 737 that are binding on all individuals and entail legal liability. The International Criminal Tribunals have  
 738 better developed the notion of individual criminal responsibility and its jurisprudence is becoming an  
 739 important guide in this matter. As a matter of fact, some international obligations are erga omnes:  
 740 such as the prohibition of torture, crimes against humanity, slavery and genocide (sometimes called  
 741 ius cogens or peremptory norms of international law). Some countries have adopted national  
 742 legislation in order to prosecute legal entities in national courts with regard to certain international  
 743 crimes. In some countries, individuals and organizations may be liable to pay compensation in respect  
 744 of harm caused by behaviour that is linked to breaches of international law by state actors.

745 Although the precise logic can vary between different organizations, an organization will largely  
 746 benefit from striving to ensure respect for human rights within their sphere of influence. Through the  
 747 respect for human rights, organizations will contribute to improve their relationship with stakeholders,  
 748 their transparency towards the society, a more secure license to operate; more sustainable  
 749 relationships with governments, business partners, and other organizations, including trade unions.

750 This section describes how human rights considerations may become relevant in an organization's  
 751 context. It provides some examples of how an organization may address some challenges that could  
 752 become relevant to organizational operations and activities. This section provides an introduction to  
 753 certain concepts of human rights and it does not provide an exhaustive or definitive list of human  
 754 rights and nor is it intended to provide legal guidance. It may never be interpreted to undermine any  
 755 existing human rights instruments.

**6.3.2 Principles and considerations**

**6.3.2.1 Non-discrimination**

Non-discrimination is one of the most fundamental principles of international human rights law. Everyone is entitled to enjoy human rights without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national, ethnic or social origin, property, birth, disability, sexual orientation, HIV/AIDS-status or any other status. Organizations should respect this principle and give practical effect to non-discrimination and equal treatment for all individuals.

**6.3.2.2 A (human) rights-based approach**

Human rights are universal and applicable to every individual and any stakeholder group. A '(human) rights based approach' means that an organization accepts that all its stakeholders have universal rights and that an organization takes into consideration the impact that its actions can have on the enjoyment of human rights. Any decisions made by an organization should strive to respect these universal rights.

At times, the organization will face challenges and dilemmas. Using a (human) rights based approach will help an organization to identify and better manage risks in decision-making processes. Using a rights analysis can highlight risks to facilitate decision making already before actions are taken. It will also allow an organization to understand challenges and dilemmas from the perspective of its stakeholders. At times, an organization may also face 'competing rights' where the interests of one stakeholder group might be in conflict with the interests of another group. A (human) rights based approach can enable better informed decisions for an organization. An analysis of activities, policies and operations of an organization should be done as early as possible in any process to facilitate considerations, in best cases before a project is initiated.

A (human) rights based approach takes the starting point from an individual or a group of individuals' rights. The approach means that an organization firstly identifies the right at stake; secondly identifies the organization's responsibilities in terms of international human rights standards, thirdly sets out the appropriate action. Implementing this approach requires a well-trained management and personnel that can appreciate the implications of it. The implementation of this approach may involve developing both general policies and specific management practices. The commitment and policies may inform the practices of the organization. In addition, the organization may also try to promote this approach even through its sphere of influence including supply chain.

**6.3.2.3 Sensitive action**

Contexts in which human rights have been abused or are being abused are often extremely complex for organizations. Organizations should never be involved in activities that can violate or contribute to violations of human rights. In contexts in which abuses do occur, the response should be considered very carefully. In particular, it is important not to compound abuse, or create other abuses.

**6.3.2.4 Human rights (risk) analysis**

A part from its moral and legal character, the organization's respect for human rights will have positive impacts and improve the relation with stakeholders, including employees, contractors, trade unions, local communities, non-governmental organizations, local and national governments, and others. An organization's support for human rights can also minimize operational disruption; can result in better opportunities for positive public relations with society, the press and other media. It can also have a positive impact upon investor confidence and share value, and improve employee's morale due to good safety performance. Not addressing human rights issues can damage stakeholder relations, such as with workers and may result in legal sanctions. Human rights observance is therefore an important part of organizational risk management. Each organization has its own risk profile, depending on size, area of activity, status etc. An organization should therefore always make a human rights related risk assessment of the risk it faces of abusing or being complicit in abuse of human

803 rights. It would be appropriate to include stakeholders in this process. There are contexts that present  
804 a high human rights related risk and need careful management, such as;

805 — operations in areas in conflict or extreme political instability or situations of poverty, drought or  
806 natural disasters;

807 — involvement in extractive activities or activities that significantly affect natural resources such as  
808 water, forests or the atmosphere;

809 — proximity of operations to indigenous peoples;

810 — activities that can affect or involve children;

811 — operation in areas where corruption is usual;

812 — security of premises; and

813 — supply chain.

#### 814 **6.3.2.5 Avoidance of complicity**

815 Observance of human rights within an organization's own activities should always be encouraged.  
816 Nonetheless, an organization should also consider its sphere of control and influence. Organizations  
817 have responsibilities to support human rights, within their sphere of influence, and to make sure they  
818 are not complicit in human rights abuses. An organization therefore has a responsibility for the  
819 activities of subsidiaries, joint venture partners and suppliers. An organization may be regarded as  
820 responsible for, or complicit in, the activities of such organizations.

821 Organizations should ensure full respect for fundamental requirements and the applicable principles of  
822 international law, and take steps to ensure that they are not complicit or aiding and abetting violations  
823 of international law. One example could be lending equipment such as helicopters or earth-moving  
824 machinery knowing, or turning a blind eye, to the likelihood of it being used to commit human rights  
825 violations by state forces.

826 Avoiding complicity in human rights abuses is an important challenge for organizations. The United  
827 Nations Global Compact states that companies should embrace, support and enact human rights  
828 within their sphere of influence and make sure they are not complicit in human rights abuses. UNGC  
829 encourages all types of organizations to adhere to its principles. The words embrace, support and  
830 enact are not defined. To embrace human rights could mean to not interfere directly or indirectly with  
831 the enjoyment of a human right. To support human rights could mean active promotion of human  
832 rights with others. To enact human rights could mean that these rights are taken into consideration in  
833 decision-making.

834 An organization may be regarded as complicit in human rights abuses if it in some way authorizes,  
835 tolerates or knowingly ignores abuses committed by a related organization or if it knowingly provides  
836 practical assistance or encouragement that has a substantial effect on the perpetration of human  
837 rights abuse. The participation of the organization need not actually cause the abuse, it can consist in  
838 an organization's encouragement or assistance without which the abuses most likely would not have  
839 occurred in the same way. This can occur by activities or co-operation with state agencies that are  
840 violating human rights. In some cases, complicity may give rise to criminal or other legal liability.

841 In assessing human rights risks and responsibilities, it is therefore important not to draw too tight a  
842 boundary around the issues under consideration but to consider the broader situation and the long-  
843 term implications for human rights. Case law is developing to clarify the legal liability of private entities  
844 for complicity in international crimes.

845 Some examples where complicity might arise:

1. When an organization actively assists, directly or indirectly, in human rights violations committed by others e.g. where an organization provides information to a government that it knows will be used to violate human rights;

2 When the organization is in a partnership with a government and knows, or should have known that the government is likely to commit abuses in carrying out its part of the agreement e.g. forced relocation of peoples;

3 When the organization benefits from human rights violations even if it does not actively assist or cause them e.g. abuses committed by security forces, such as the suppression of a peaceful protest against an organization's activities or the use of repressive measures while guarding organizational facilities;

4 When the organization is silent or inactive in the face of systematic or continuous human rights violations e.g. inaction or acceptance by organizations of systematic discrimination in employment law against particular groups.

State-owned organizations are part of the state and may therefore have direct responsibilities under international human rights law.

### **6.3.3 Human rights issue 1: Civil and political rights**

#### **6.3.3.1 Description of the issue**

Civil and political rights include freedom of opinion and expression, freedom of peaceful assembly and association, freedom to adopt and practice a religion, freedom to hold beliefs, freedom from arbitrary interference with family, home or correspondence and the right to privacy. Moreover, civil and political rights include rights such as the right to life, right to freedom from torture, right to security, liberty and integrity of the person. Civil and political rights serve to limit the power of the state and protect the individual liberties.

The state has the responsibility to respect, protect and fulfil such rights. Individuals and organizations should respect and refrain from actions that obstruct or impede the realization of civil and political rights. List of actions and expectations below provides an illustration and not an exhaustive list.

#### **6.3.3.2 Related actions and/or expectations**

An organization should always respect the right to life of individuals: "every human being has the inherent right to life; no one shall be arbitrarily deprived of his life".

An organization should refrain from undertaking activities in areas of the world where the governments do not respect people's right to life and where state arbitrarily takes human lives unless the organization can be assured after careful analysis that they can undertake their activities in such a way that they will not be complicit in human rights abuses.

Organizations should take all necessary measures to ensure compliance with the law and respect for human life and only engage properly trained and supervised security forces. An organization should refrain from arbitrary or unlawful interference with people's privacy, family, home or correspondence, nor engage in unlawful attacks upon people's honour and reputation. Any personal records of employees (e.g., medical records) held by an organization should be treated in the strictest confidence terms, and only with the knowledge and consent of the individual concerned.

An organization should respect the right to freedom of opinion and expression; this includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of national borders. An organization may face a situation in which the members of the local community voice opinions about its activities. Their right to freedom of expression should be respected, just as should those of the employees of the organization. An organization should make every effort to provide stakeholders with channels to freely express their

891 views even in situations of disagreement with organizational decisions. Organizations should not try to  
892 suppress stakeholder views or opinions.

893 An organization should respect the peremptory international prohibition of torture. Any disciplinary  
894 measures should be proportionate and not involve physical punishment or inhuman or degrading  
895 treatment. Organizations operating in areas of conflict should ensure that their security forces do not  
896 commit such abuses.

#### 897 **Box 1 Security arrangements and human rights**

898 All organizations should make sure that security arrangements respect human rights and are  
899 consistent with international UN standards and norms for law enforcement. Procedures should include  
900 measures to prevent excessive force, torture, cruel, inhuman or degrading treatment. Organizations  
901 should refrain from any activity that supports, solicits, or encourages human rights abuse. Any security  
902 personnel (employed or contracted) should be adequately trained. Organizations should develop clear  
903 rules for contracting with state security forces and for not hiring security personnel with a record of  
904 human rights violations. Potential complaints about security procedures or personnel should be  
905 addressed and investigated promptly and independently. Organizations supplying military security or  
906 police services should take measures to prevent any form of human rights violations.

907 An organization should respect everyone's right to liberty and freedom of movement. For example;  
908 organizations should not confiscate employees' passports or travels documents or unnecessarily limit  
909 their freedom of movement or liberty.

910 An organization within its activities and sphere of influence including its supply chain should ensure  
911 that "no one is in slavery", that "no one is held in servitude" and that "slavery and the slave trade in all  
912 their forms is prohibited". Slavery is a multidimensional violation of human rights and basic freedoms,  
913 and the prohibition against slavery and other forms of forced and bonded labour is absolute. An  
914 organization should make efforts to trace supplies that may have been produced by slave labour, and  
915 refrain from using them.

### 916 **6.3.4 Human rights issue 2: Social, economic, and cultural**

#### 917 **6.3.4.1 Description of the issue**

918 Social, economic and cultural rights include an individual's rights to food, education, health, medical  
919 care, culture and social services. Social, economic and cultural rights can require a proactive and  
920 progressive approach by the state in order to fulfil such rights, and organizations can contribute  
921 positively within their own spheres of influence. The state has the responsibility for the fulfilment of  
922 social, economic and cultural rights. Nevertheless, all organizations should respect such rights and  
923 contribute to their realization and refrain from actions that obstruct or impede the realization of such  
924 rights. List of actions and expectations below provides an illustration and not an exhaustive list.

#### 925 **6.3.4.2 Related actions and/or expectations**

926 An organization should respect everyone's right to a standard of living adequate for the health and  
927 well-being of himself or herself and family, including food, clothing, housing, medical care and  
928 necessary social protection, such as the right to security in the event of unemployment, sickness,  
929 disability, widowhood, old age or other lack of livelihood in circumstances beyond his or her control.  
930 For example, an organization should ensure that wages guarantee a decent standard of living, even if  
931 the domestic law allows for lower standards.

932 An organization should not limit or deny access to an essential product or resource, such as water.  
933 Special care should be taken when privatizing such goods or services in order not to limit their  
934 accessibility. An organization should also be careful that earnings allow access to these rights.

935 An organization should respect everyone's right to enjoy the highest attainable standard of physical  
936 and mental health. Activities, goods and services, as well as new projects, may require an

937 assessment of their possible impacts on human rights and health and safety, including those of the  
938 local population and end-users.

939 An organization should respect everyone's right to education and the right of parents to choose the  
940 education for children. Education should be directed to the full development of the human personality  
941 and dignity, and should strengthen the respect for human rights and fundamental freedoms. An  
942 organization should bear in mind that, apart from the direct harm that may result, the employment of  
943 children may also deprive them of education. International standards on minimum age and young  
944 workers should be respected.

945 An organization should respect that adult men and women, without any limitations of race, nationality  
946 or religion, have the right to marry and to have a family. An organization should organize working  
947 conditions to be consistent with their employees' enjoyment of family life. Required working hours  
948 should be consistent with the ability to care for a sick child, to take time off to give birth or other family  
949 responsibilities. Respecting the right to family life entails not impeding employees' rights to marry and  
950 start a family, not discriminating on the basis of family affiliation, providing parental leave to families  
951 with a new child and promoting a work-life balance.

952 An organization should respect everyone's right to freedom of thought, conscience, religion and  
953 culture. This includes freedom to change his or her religion or belief, and freedom, either alone or in  
954 community with others, and in public or private, to manifest his or her religion or belief in teaching,  
955 practice, worship and observance.

956 An organization should respect everyone's right to own property, alone or in association with others.  
957 An organization should fairly compensate property owners for their intellectual and physical property.  
958 The practical knowledge of indigenous peoples is their intellectual property. An organization should  
959 divulgate the intellectual property policy for work developed by its members.

### 960 **6.3.5 Human rights issue 3: Vulnerable groups**

#### 961 **6.3.5.1 Description of the issue**

962 Certain groups or categories of people are more vulnerable to human rights abuse. Particular  
963 attention should be given to the human rights of vulnerable groups. An organization should take into  
964 account and will benefit from understanding different aspects of vulnerability eg. when analyzing  
965 impact on its sphere of influence. The full and effective participation and inclusion in society for all  
966 groups provides opportunities for all organizations as well as the people concerned. An organization  
967 has much to gain by taking an active approach in ensuring equal opportunity and respect for all  
968 individuals. The most important measures to take will depend on the specific organization and its  
969 context. List of actions and expectations below provides an illustration of vulnerabilities and not an  
970 exhaustive list.

#### 971 **6.3.5.2 Related actions and/or expectations**

972 An organization should respect the rights of indigenous peoples and minorities. Where organizations  
973 operate in unfamiliar environments, it is particularly important to protect the freedom of their  
974 stakeholders to live accordingly to their traditions. Organizations should ensure that any operation,  
975 policy and activity allow people to enjoy their culture, to profess and practice their religion or tradition,  
976 and to use their language.

977 An organization should respect women's rights and be mindful of the opportunities created in  
978 promoting the equal treatment of women and men. This is especially true with regards to the  
979 discrimination against pregnant women and the development of family-friendly policies which eg.  
980 enable women not to have to decide between pregnancy and employment. Family-friendly policies  
981 should aim to allow men as well as women to exercise parental and other personal responsibilities.

982 An organization should, in all actions concerning children, give primary consideration to the best  
983 interest of the child. The principles from the Convention on the Rights of the Child including non-  
984 discrimination, a child's right to life, survival, development and free expression should be respected.

985 An organization should respect persons with disabilities and their inherent dignity, individual autonomy,  
 986 including the freedom to make their own choices, and independence. Persons with disabilities include  
 987 people with special needs resulting from diseases.

988 An organization should not discriminate against migrants and migrant workers.

## 989 **6.3.6 Human rights issue 4: Fundamental rights at work**

### 990 **6.3.6.1 Description of the issue**

991 This section deals with those human rights that the International Labour Organization (ILO) has  
 992 designated as fundamental rights at work. The 180 member states of the ILO and their respective  
 993 national employer and worker organizations, by virtue of their participation in the ILO, endorsed the  
 994 ILO Declaration on fundamental principles and rights at work in 1998 and have accepted the  
 995 obligation to promote and to realize these rights in good faith.

996 Further information on the ILO and other human rights relating to work can be found in Clause 6.4 on  
 997 Labour Practices, particularly concerning how freedom of association and collective bargaining relate  
 998 to social dialogue.

### 999 **6.3.6.2 Related actions and/or expectations**

1000 An organization should respect the right of all workers to form or join their own organizations without  
 1001 previous authorization and to bargain collectively. Workers may form or join trade unions to further  
 1002 and protect their interests. Organizations should not interfere with the exercise of this right in any way  
 1003 against the workers concerned.

1004 Representative organizations chosen by the workers should be recognized for purposes of collective  
 1005 bargaining. Terms and conditions of employment may be fixed by voluntary collective negotiation, and  
 1006 workers' representatives should be given facilities that will enable them to do their work. Collective  
 1007 agreements should include provisions for the settlement of disputes. Workers' representatives should  
 1008 be provided with information required for meaningful negotiations.

1009 An organization should not engage or benefit from any use of forced or compulsory labour. No work or  
 1010 service should be exacted from any person under the threat of any penalty or when that person has  
 1011 not volunteered for it. An organization should not engage or benefit from prison labour, unless the  
 1012 prisoners have been convicted in a court of law and their labour is under the supervision and control  
 1013 of a public authority: prison labour should not be used by private organizations, unless it is performed  
 1014 on a voluntary basis, as evidenced by, among other things, fair and decent conditions of employment.  
 1015 Forced or compulsory labour should not be imposed as a means of political coercion or as a  
 1016 punishment for holding political views, as a method of mobilizing for development, as a means of  
 1017 labour discipline, as punishment for a strike or as a means of discrimination.

1018 An organization should not engage or benefit from any use of child labour. The minimum age for  
 1019 employment should be respected. International labour standards establish a minimum age of 15 years  
 1020 generally, and 14 years of age in some developing countries. Children and young persons under 18  
 1021 should not be employed in any work that, by its nature or the circumstances by which it is carried out,  
 1022 is likely to harm their health, safety or morals.

1023 An organization should not discriminate in its employment practices. Recruitment, training and  
 1024 promotion should be based on qualifications, skills and experience and not on any of the following  
 1025 criteria: race, colour, gender, sexual orientation, religion, political affiliation, nationality or social origin.  
 1026 In addition, organizations should not discriminate on the basis of health status, such as HIV/AIDS.  
 1027 Workers in an organization who are performing work of equal value should be remunerated on an  
 1028 equal basis; often work performed predominately by women is undervalued, due to gender  
 1029 discrimination. Organizations should check their remuneration policies regularly to make sure that  
 1030 they are free of gender bias and are based on objective job evaluation.

## 6.4 Labour practices

### 6.4.1 Rationale

The labour practices of an organization encompass all policies and practices relating to work performed within, by or on behalf of the organization. As such, the term extends beyond the relationship of the organization with its direct employees or the responsibilities that the organization may have at a workplace that it owns or directly controls. Labour practices include the responsibilities of the organization for work performed on its behalf by others. They also include requirements that the organization may make with respect to the labour conditions of workers engaged by others to perform work for or to supply goods or services to the organization.

Labour practices include the recruitment and promotion of workers; disciplinary and grievance procedures; the transfer and relocation of workers; termination of employment; training and skills development; health, safety and industrial hygiene; and any policy or practice affecting conditions of work. Labour practices also include the recognition of worker organizations and representation and participation by the organization in collective bargaining, social dialogue and tripartite consultation to address social issues related to employment.

The labour practices of an organization can have great impact on society and thereby can contribute significantly to sustainable development. The creation of jobs, as well as wages and other compensation paid for work performed are among an organization's most important economic impacts. Meaningful and productive work is an essential element in human development. The absence of meaningful and productive work is one of the primary causes of social problems. Labour practices have a major impact on respect for the rule of law and on the sense of fairness present in society: socially responsible labour practices are essential to social justice and stability.

An organization's labour practices can have a significant impact on its ability to recruit, motivate and retain employees and therefore on its ability to obtain its objectives. Labour practices can also have a significant impact on the reputation of the organization.

### 6.4.2 Principles and considerations

The fundamental principle, enshrined in the ILO's 1944 Declaration of Philadelphia, is that labour is not a commodity. This means that workers should not be treated as a factor of production and subject to the same market forces. The inherent vulnerability of workers and the need to protect their basic rights is reflected in the Universal Declaration of Human Rights and the International Covenant on Economic, Social and Cultural Rights. The principles involved include the right of everyone to gain a living by freely chosen work, and the right to just and favourable conditions of work.

Many internationally recognized human rights are related to labour. The right of all workers to form or join their own organizations and to collectively bargain with their employer, as well as to be free from discrimination with respect to employment and occupation, and from child labour and forced labour are all basic human rights: as such they are dealt with in greater detail in Clause 6.3. These rights are also recognized by the ILO as fundamental rights at work and are expressed in eight Conventions referred to as the Core Conventions. Many other ILO Conventions and Recommendations also give practical meaning to the provisions in the Universal Declaration of Rights and its two covenants mentioned in Clause 6.3.7.

The primary responsibility for ensuring fair and equitable treatment for workers<sup>1)</sup> lies with governments. Through the formulation of legislation and the rule of law, governments fulfil their obligation for national standards to comply with international standards and rights. Governments also hold the primary responsibility for determining that laws and regulations are upheld, and that both workers and organizations have the necessary access to justice in the event that they are not.

---

1) The term "employee" refers to an individual in a relationship recognized as an "employment relationship" in national law or practice. The term "worker" is a more general term and refers to anyone who performs work. The term "worker" could refer to an employee or to someone who is self-employed.

Unfortunately, not all governments are willing or able to assume their responsibility, in which case workers are more vulnerable, and social responsibility of employers is more imperative. Organizations express their own social responsibility by addressing labour practices and working conditions issues, which they can themselves control or influence. Failure by governments to enforce labour laws should not be seen by organizations as an opportunity to avoid the respect of workers' rights. The spirit or intent of the law should prevail. A major consideration is that co-operation and collective bargaining should be the basis for organizations behaving in a socially responsible manner.

It is important to distinguish the government in its role as organ of state as considered above with the role of government in its role as an employer. Government bodies or state owned organizations as other organizations addressed here have the same responsibilities for their labour practices as other organizations.

### 6.4.3 Labour practices issue 1: Employment and employment relationships

#### 6.4.3.1 Description of the issue

The significance of employment for human development is universally accepted. As employers, organizations contribute to one of the most widely accepted objectives of society, which is the improvement of standards of living through full and secure employment.

Every country provides a legal framework within which work is to be performed. Despite a range of different legal systems, the employment relationship is a universal concept, which recognizes that most workers in a position of subordination to and dependency on the person or organization for whom they perform work should not be treated as if they are equal parties in a commercial relationship with their employer. That difference is the underlying basis for labour law or employment law. The employment relationship confers rights and imposes obligations on both employers and employees in the interest of society as a whole.

Not all work is performed within an employment relationship. Work and services are also performed by persons who are self-employed. Even here, however, the importance of the appropriate legal and institutional framework to both society and the individual performing work should be recognized. All parties to a contract are entitled to understand their rights and responsibilities and to have recourse in the event that the terms of the contract are not respected.

In this context labour is understood to be work performed for compensation and does not include activities undertaken by genuine volunteers. However the policies and measures that all organizations should adopt to discharge and fulfil obligations relating to such things as criminal liability and duty of care need to be taken into account where volunteers are involved.

#### 6.4.3.2 Related actions or expectations

An organization should:

- Be confident that all work performed directly on its behalf is performed by individuals who are legally recognized as employees or who are legally recognized as being self-employed;
- Not seek to avoid the obligation that law places on the employer by disguising relationships that would otherwise be recognized as an employment relationship under law;
- Recognize the importance of secure employment to both the individual worker and to society. Use active workforce planning to avoid the use of work performed on a casual basis or the excessive use of work performed on a temporary basis, except where the nature of the work is genuinely short term or seasonal;
- Provide reasonable notice, timely information and, with worker representatives, jointly consider how to mitigate adverse effects to the greatest possible extent when considering changes in its operations, such as closures that affect employment;

- 1121 — Eliminate discrimination in employment practices and offer equal opportunities to women, workers  
1122 with disabilities and other vulnerable groups, such as young or older workers, migrants and  
1123 indigenous peoples;
- 1124 — Not engage in arbitrary or discriminatory dismissal practices;
- 1125 — Contract out work only to organizations that are legally recognized or are otherwise able and  
1126 willing to assume the responsibilities of an employer and to provide decent work. This excludes  
1127 labour intermediaries who are not legally recognized and other arrangements for the performance  
1128 of work that do not confer legal rights on those performing the work. In this regard, it should take  
1129 steps to confirm that the organizations with which it deals, for instance suppliers and sub-  
1130 contractors, are legitimate enterprises whose labour practices require that all work be performed  
1131 within the appropriate legal and institutional framework; and
- 1132 — Organizations should not benefit from the unfair, exploitative or abuse labour practices of their  
1133 partners, suppliers or sub-contractors. An organization should accept responsibility for work done  
1134 on its behalf by other organizations commensurate with the degree of control that it exercises and  
1135 with the likelihood that the rights of the workers concerned may not be respected. Depending on  
1136 these circumstances reasonable efforts to address these responsibilities could include  
1137 establishing contractual obligations on suppliers and subcontractors; unannounced visits and  
1138 inspections; exercise of due diligence in supervising contractors and intermediaries. Where  
1139 suppliers and subcontractors are expected to comply with a code of labour practice, the code  
1140 should be based on internationally recognised labour standards and respect for the rule of law.  
1141 Organizations adopting codes should follow good practice with respect to the implementation of  
1142 such codes. See section 6.6.6 for additional information about responsibilities in the supply chain.
- 1143 — Where operating internationally give priority to the employment, occupational development,  
1144 promotion and advancement of nationals of the host country. This includes sourcing and  
1145 distributing through local enterprises where practical.

1146 **Box 2 The International Labour Organization**

1147 The International Labour Organization is a United Nations agency with a tripartite structure  
1148 (governments, workers and employers) that was established for the purpose of setting international  
1149 labour standards. These minimum standards are applicable to workers everywhere, and are intended  
1150 to prevent unfair competition based on exploitation and abuse. ILO standards are technically well  
1151 informed and have the support of employers, workers and governments, whose tripartite negotiation  
1152 at the global level leads to their adoption. The meaning and proper application of ILO standards have  
1153 been elaborated through the ILO supervisory mechanisms, and this jurisprudence can be a source of  
1154 guidance and good practice. ILO Conventions and Recommendations, together with the ILO  
1155 Declaration on fundamental principles and rights at work 1998 and the ILO's Tripartite Declaration of  
1156 principles concerning multinational enterprises and social policy 1977 (last revised 2006), constitute  
1157 the most authoritative guidance with respect to labour practices and some other important social  
1158 issues. The ILO seeks to promote opportunities for women and men to obtain decent and productive  
1159 work, which it defines as work performed in conditions of freedom, equity, security and human dignity.

1160 **6.4.4 Labour practices issue 2: Conditions of work and social protection**

1161 **6.4.4.1 Description of issue**

1162 Conditions of work include wages and other forms of compensation, working time, rest periods,  
1163 holidays, disciplinary and dismissal practices, maternity protection, work-life balance and many other  
1164 subjects. Many of the conditions of work are determined by national laws and regulations or by legally  
1165 binding agreements between those for whom work is performed and those who perform work. The  
1166 employer can determine many of the conditions of work.

1167 Social protection refers to all guarantees against the reduction or loss of income in case of  
 1168 employment injury, illness, maternity, parenthood, old age, unemployment, disability or any other  
 1169 financial hardship.

#### 1170 **6.4.4.2 Related actions or expectations**

1171 An organization should:

1172 — confirm that the conditions of work comply with national laws and regulations and are at least  
 1173 consistent with relevant international labour standards;

1174 — respect higher levels of provision established through other applicable legally binding agreements;  
 1175 and

1176 — observe at least those minimum provisions defined in international labour standards as  
 1177 established by the ILO, where national legislation is silent.

1178 Based on principles established in international labour standards, an organization should:

1179 — provide decent conditions of work in respect of wages, hours of work, weekly rest holidays, health  
 1180 and safety, and maternity protection and they should not be less favourable to the workers than  
 1181 those offered by other comparable employers in the country and locality concerned;

1182 — provide the best possible wages and other conditions of work in accordance with national law and  
 1183 practice e.g. as included in relevant collective bargaining. these should be related to the economic  
 1184 position of the organization, but should at least satisfy the basic needs of the workers and their  
 1185 families;

1186 — pay wages directly to the workers concerned, subject only to any restrictions or deductions  
 1187 permitted by law or collective agreement;

1188 — [recognize that, within the context of the country in which it is operating, it has obligations  
 1189 concerning the provision of social protection for workers and should not seek to evade these  
 1190 obligations;]

1191 — respect the right of workers to adhere to normal or agreed working hours established in law,  
 1192 regulations or collective agreements. in any event, workers should not on a regular basis be  
 1193 required to work in excess of 48 hours per week. workers should also be provided with at least  
 1194 one day off for every seven-day period, and entitled to paid annual leave of at least three weeks.

1195 — should compensate workers for overtime in accordance with national law and practice. when  
 1196 requesting workers to work overtime, an organization should take into account the particular  
 1197 vulnerabilities of the workers concerned and any hazards inherent in the work. an organization  
 1198 should respect laws and regulations prohibiting mandatory and non-compensated overtime, and  
 1199 always respect the basic human rights of workers concerning forced labour; and

1200 — wherever possible allow observance of national or religious traditions and customs with respect to  
 1201 weekly rest.

#### 1202 **6.4.5 Labour practices issue 3: Social dialogue**

##### 1203 **6.4.5.1 Description of the issue**

1204 Social dialogue includes all types of negotiation, consultation or exchange of information between or  
 1205 among representatives of governments, employers and workers on subjects of common interest  
 1206 relating to economic and social issues. Social dialogue is based on the recognition that employers and  
 1207 workers have both competing and common interests, and plays an important role in the governance of  
 1208 many countries.

Social dialogue requires independent parties. Genuine worker representatives are freely elected, in accordance with national laws, regulations or collective agreements, by either the members of their trade union or by the workers concerned. They are not individuals designated by the government or the employer. Social dialogue takes various forms including enterprise-level information and consultation mechanisms (such as Works Councils) and collective bargaining. Trade unions, as the chosen representatives of workers, have a particularly important role to play in social dialogue.

Effective social dialogue provides a mechanism for developing policy or finding solutions to problems that takes into account the priorities and needs of both employer and workers, and thus results in outcomes that are meaningful and sustainable for both the organization and society. Social dialogue can contribute to establishing participation and democratic principles in the workplace and to healthy labour-management relations thus minimizing the resort to costly industrial disputes and encouraging investment. Social dialogue can be the best means for managing change. It can be used to design skills development programmes contributing to human development and enhancing productivity, or to minimize the negative social effects of changes in the operations of organizations.

Social dialogue can take many forms and can occur at various levels. Workers may wish to form groups with a broader occupational, inter-occupational or geographical coverage. Employers and workers are in the best position to decide jointly the most appropriate level – if they so wish, by adopting a mixed system of framework agreements supplemented by local organization level agreements.

Social dialogue may at times address contentious issues; in which case the parties can establish a dispute resolution process. Social dialogue can also concern grievances for which a complaints mechanism is important, particularly in countries where the fundamental principles and rights at work are not adequately protected.

#### **6.4.5.2 Related actions or expectations**

An organization should:

- recognize the importance of social dialogue institutions and applicable collective bargaining structures including at the international level for organizations operating internationally in sectors where a global trade union federation exists or where the issues discussed or negotiated are of wider significance than the organizational level;

- participate in relevant employers' organizations as a means of creating opportunities for social dialogue and extending their expression of social responsibility through such channels. not oppose or discourage in any way the exercise by workers of their right to form or join their own organizations or to bargain collectively;

- not dismiss or otherwise discriminate against workers, threaten to relocate or outsource jobs or enter primarily or exclusively to thwart workers who seek to form or join their own organizations and to bargain collectively;

- provide duly designated worker representatives with access to authorized decision makers, access to workplaces and to those they represent, the facilities necessary to perform their role and information that will allow them to have a true and fair picture of the organization's finances and activities; and

- not encourage governments to restrict the exercise of the internationally recognized rights of freedom of association and collective bargaining; it should not participate in incentive schemes based on such restrictions.

## 1252 **6.4.6 Labour practices issue 4: Health and safety at work**

### 1253 **6.4.6.1 Description of the issue**

1254 Health and safety at work concerns the promotion and maintenance of the highest degree of physical,  
1255 mental and social well-being of workers and prevention of departures from health caused by working  
1256 conditions, the protection of workers from risks adverse to health and the adaptation of the  
1257 occupational environment to the physiological and psychological capabilities of workers.

1258 The financial and social costs to society of work-related illness, injuries and death are high. Pollutants  
1259 and other workplace hazards that are harmful for workers may also have impacts on communities and  
1260 or the environment. For more information on environmental hazards see section 6.5. Health and  
1261 safety issues arise over dangerous equipment, processes, practices and substances (chemical,  
1262 physical and biological).

1263 Socially responsible health and safety practices can reduce costs, improve morale and increase  
1264 productivity.

### 1265 **6.4.6.2 Related actions or expectations**

1266 An organization should:

1267 — seek to understand and control the health and safety risks involved in its activities. it should also  
1268 understand the proper procedures that should be followed and provide the safety equipment  
1269 needed for the prevention of occupational diseases, accidents and for dealing with emergencies;

1270 — analyse work accidents and diseases and problems raised by workers so as to understand and be  
1271 able to advise on the different ways in which women and men are affected;

1272 — understand and apply principles of industrial hygiene including the hierarchy of controls i.e.  
1273 substitution, engineering, work procedures, administrative and personal protective equipment;

1274 — recognize that psychosocial hazards in the workplace is the cause of stress and occupational ill-  
1275 health;

1276 — have a health and safety policy that clearly states that no phase of operation or administration of  
1277 the organization is more important than safety and health and that safety and health is an integral  
1278 part of all of its activities. this policy should be backed by a management commitment and  
1279 reflected in resources allocated and the support given to those responsible for carrying it out;

1280 — provide adequate training and capacity building in all relevant subjects to all relevant personnel

1281 — respect the principle that health and safety measures should not involve expenditures by workers;  
1282 and

1283 — adopt health and safety systems that are based on the participation of the workers concerned and  
1284 that recognize and respect the rights of workers to:

1285 — full and accurate information concerning the health and safety risks and the best practices  
1286 used to address these risks;

1287 — freely inquire into and to be consulted on all aspects of their health and safety related to their  
1288 work;

1289 — refuse work which is reasonably considered as posing an imminent and serious danger to  
1290 their life or health or to the lives and health of others;

1291 — seek outside advice on health and safety issues;

- 1292 — report health and safety matters to the authorities;
- 1293 — participate in health and safety processes and decisions; and
- 1294 — be free of reprisals for doing any of these things.

**Box 3 Joint labour-management health and safety committees**

For many organizations, joint labour-management health and safety committees [can be][are] the most valuable part of the organization's health and safety program. Joint committees can perform important roles such as information gathering, the development and dissemination of safety manuals and training programs, the reporting, recording and investigation of accidents, inspections and responding to problems raised by employees. Worker representatives on these committees should not be appointed by management but elected by the workers themselves. Membership in these committees should be equally divided among management and worker representatives and should include women and men whenever possible. The committees should be of sufficient size for all shifts, sections and locations to be represented. [They should not be considered a substitute for trade unions or works councils.]

**6.4.7 Labour practices issue 5: Human development**

**6.4.7.1 Description of the issue**

Human development is the process of enlarging people's choices by expanding human capabilities and functioning, thus enabling people to lead long and healthy lives, to be knowledgeable and to have a decent standard of living. Human development also refers to political, economic and social opportunities for being creative and productive and enjoying self-respect and a sense of belonging to a community. Human development can be a labour practice because employers can use workplace policy and initiatives to further human development by addressing important social issues, such as fighting discrimination, balancing family responsibilities and promoting health and well-being.

Human development can also be a labour practice because it includes increasing the capacity and employability of individuals. Employability refers to the experiences, competencies and qualifications that increase an individual's capacity to secure and retain decent work. Organizations have every interest in facilitating the education, training and lifelong learning of workers, as these things contribute significantly to promoting the interests of the organizations themselves - as well as those of the individual workers, the economy and society as a whole - in terms of the capacities, motivation, effectiveness, productivity and overall performance of the men and women whom they employ.

**6.4.7.2 Related actions or expectations**

An organization should:

- provide access to skills development and training and opportunities for career advancement to workers on an equal and non-discriminatory basis;
- respect the family responsibilities of workers by providing reasonable working hours and through other policies, such as childcare facilities and parental leave, that can help workers achieve a proper work-life balance;
- not discriminate on any basis in employment practices; this includes recruitment, selection, access to training, promotion and termination;
- take positive actions to provide for the protection and advancement of vulnerable groups such as indigenous and migrant workers as well as workers with disabilities;
- establish or participate in appropriate programmes that address issues such as youth unemployment or the underemployment of women; and

— establish joint labour-management programmes that promote health and well-being. The impact of infectious disease and substance abuse, for example, affect both the performance of the organization and the overall health of society.

## **6.5 The environment**

### **6.5.1 Rationale**

Society is facing many environmental challenges including the depletion of natural resources, pollution, climate change, the destruction of habitat, loss of species and the collapse of whole ecosystems. As the population grows and our consumption increases these issues are becoming serious threats to human security, and the health and wellbeing of society. Environmental issues - from local to global - are interconnected, and addressing them requires a comprehensive approach. Environmental issues are closely linked to human rights, social development and other core social responsibility issues. Many environmental issues transcend national boundaries, and no single state or sector of society can meet the challenge alone. All organizations have aspects of their activities, products or services that may lead to negative environmental impacts. Environmental sustainability will require a collective effort to reduce rates of consumption and environmental degradation, particularly from those causing the greatest environmental burdens.

Environmental responsibility is not only a precondition for our survival and prosperity; it is a social responsibility to enable future generations to inherit a sustainable global environment. Addressing environmental issues offers a unique opportunity for organizations to act in a more socially responsible way while reducing costs and stimulating new forms of economic growth and prosperity.

### **6.5.2 Principles and considerations**

#### **Principles**

An organization should respect and promote the following environmental principles.

#### **6.5.2.1 Environmental responsibility (66)**

An organization should accept accountability for the environmental burdens caused by its activities, products and services and act to improve its own performance and performance within its control or sphere of influence including supply chains. An organization should demonstrate environmental leadership and wherever practical, the adoption of best practices to achieve a better than average performance and, ideally, a level corresponding to the Best Available Technique (BAT) in all applicable areas.

#### **6.5.2.2 Precautionary approach (69)**

An organization should, adopt a precautionary approach to protecting human health and the environment. Where there are threats of serious or irreversible damage, a lack of full scientific certainty should not be used as a reason for postponing cost-effective measures to prevent potential health impacts or environmental degradation. In conditions of uncertainty, the use of tools such as life cycle analysis, environmental risk assessment and environmental impact assessment can be useful in identifying and mitigating possible social, environmental and health impacts of activities, products and services. When carrying out human health and environmental risk assessments conservative assumptions should be made to address uncertainties or data gaps (e.g., related to exposure or effects).

#### **6.5.2.3 Environmental risk management**

An organization should implement programs to assess and reduce environmental risks from activities, products and services from a life cycle perspective. An organization should develop and implement emergency response procedures to mitigate environmental and health burdens caused by accidents and to communicate environmental incidents to appropriate authorities. Risk-based approaches

consider both the intrinsic hazard of a substance, and the potential for exposure in order to develop appropriate risk management strategies. An organization can set safety targets such as the prevention of accidents in the workplace, or during storage, handling and end-use of substances that may pose environmental risks. An organization should consider pursuing objectives such as fostering a safety culture; advancing integration between occupational health, safety and environmental considerations; and addressing accident risk reduction and preparedness for emergencies by linking use of standards such as ISO14001 and ISO18001.

#### **6.5.2.4 Polluter pays**

An organization should bear the cost of pollution caused by its activities, products and services according to the extent of either the environmental burden to society and remedial action required or the degree to which the pollution exceeds an acceptable level (international expectations of behavior). An organization should use the polluter pays principle to internalize the cost of pollution and quantify the economic and environmental benefits of preventing pollution rather than mitigating its effects.

#### **Considerations**

An organization should assess the relevance of the following considerations.

#### **6.5.2.5 Take a Life cycle approach**

A fundamental perspective for addressing environmental issues is that of a life cycle approach. A life cycle approach links the economic, social and environmental dimensions of activities, products services throughout their life cycle – from raw materials and energy generation, through production and use, to end-of life disposal or recovery - potentially leading to multiple benefits. An organization should consider the environmental performance of activities, goods and services over their life cycle.

##### **a) Practice eco-efficiency [and eco-design]**

Eco-efficiency is “the delivery of competitively priced goods and services that satisfy human needs and bring quality of life, while progressively reducing ecological impacts and resource intensity throughout the life cycle to a level at least in line with the earth’s estimated carrying capacity.”<sup>2)</sup> Eco-efficiency addresses all potential environmental burdens and links environmental and economic performance of activities, products and services. Since it is at the design stage that most of the environmental features of a product or service are defined, eco-design (the integration of environmental considerations in the design process, together with other criteria such as profit, functionality, aesthetics, ergonomics, image, overall quality, etc.) is a very effective approach to implementing eco-efficiency.

##### **b) Adopt a product-service system approach**

Product service systems can be used to shift focus from selling products to selling a system of products and services that jointly fulfill consumer needs. This can lead to innovations that reduce material use and decouple revenues from material flows, involve stakeholders in designing integrated solutions that promote extended producer responsibility through the life cycle of the product and accompanying service. Product-service systems include product lease, product renting or sharing, product pooling (simultaneous use of the product) and pay-for-service where the user does not buy the product but buys the desired output (e.g., copying services over buying a copier). A product-service system approach involves also supporting the sale of products with associated services. This can increase the value of a product by including upgrades, maintenance support, financing schemes, supply of consumables and advice on the efficient use of the product and reduce its environmental burden.

---

2) Eco-efficiency: Creating more value with less impact. WBCSD, 2000. [www.wbcds.com](http://www.wbcds.com)

### 1423 **6.5.2.6 Adopt cleaner production strategies**

1424 Cleaner production is a strategy for using resources more efficiently while generating less waste by  
 1425 making improvements at the source rather than the end of a process or activity. Cleaner production  
 1426 approaches include; improving maintenance practices, upgrading or introducing new technologies or  
 1427 processes, reducing materials and energy use, eliminating toxic and hazardous materials, and  
 1428 improving design. These approaches can lead to more environmentally sustainable processes,  
 1429 products and services along with economic benefits.

### 1430 **6.5.2.7 Use of environmentally sound technologies and practices (68)**

1431 An organization should seek to adopt, and where appropriate, promote the development and diffusion  
 1432 of environmentally sound technologies and services, those that "protect the environment, are less  
 1433 polluting, use all resources in a more sustainable manner, and follow the waste management  
 1434 hierarchy" (3). Relevant technical guidance and standards such as ISO 14000 series standards and  
 1435 international expectations of behavior should be considered when pursuing environmentally sound  
 1436 technologies and practices. An organization may refocus research and development towards 'design  
 1437 for sustainability', and examine investment criteria and its sourcing policy for suppliers and contractors  
 1438 to ensure that tenders stipulate minimum environmental criteria.

### 1439 **6.5.2.8 Implement [Sustainable purchasing] [Green procurement] programs**

1440 An organization should implement a sustainable purchasing program committing to purchase products,  
 1441 materials and services taking into account the environmental and social performance over the entire  
 1442 life cycle and prioritizing performance based on eco-labeling criteria. This principle addresses the  
 1443 environmental and social implications of the purchasing decisions of organizations and not the  
 1444 influence an organization has on the purchasing habits of individual consumers (which is addressed in  
 1445 the section on Consumer Issues).

## 1446 **6.5.3 Environmental issue 1: Prevention of pollution**

### 1447 **6.5.3.1 Description of the issue**

1448 An organization can improve its environmental performance by preventing pollution including  
 1449 emissions to air, discharges to water, the generation of solid or liquid waste, contamination of land  
 1450 and soils, the use and disposal of toxic and hazardous chemicals, and other pollution from its activities,  
 1451 products and services. Pollution may be prevented by applying appropriate techniques such as  
 1452 cleaner production, eco-efficiency and life cycle management (as introduced as Considerations).

#### 1453 **a) Prevent emissions to air**

1454 An organizations emissions to air of pollutants such as lead, mercury, volatile organic compounds  
 1455 (VOCs), sulfur dioxide (SO<sub>2</sub>), nitrogen oxides (NO<sub>x</sub>), particulates and ozone depleting substances can  
 1456 cause environmental and health burdens on society. These emissions may come directly from an  
 1457 organizations facilities or mobile sources or be caused indirectly by, the use of its products or services  
 1458 or the generation of the electricity it consumes.

#### 1459 **b) Prevent discharges to water**

1460 An organization may cause water to become polluted through direct, intentional or accidental  
 1461 discharges (liquid or solid) into surface water bodies, or unintentional runoff to surface water or  
 1462 infiltration to ground water. An organization may be discharging toxic or hazardous chemicals, organic  
 1463 materials, invasive species (ship ballast water), sewage, petro-chemicals or fuels and other pollutants  
 1464 to water causing negative impacts on human health, ecosystems and the value of natural resources.

#### 1465 **c) Prevent waste**

1466 An organization's activities, products and services may lead to the generation of liquid or solid waste  
1467 that if improperly managed can cause contamination of air, water land and soils. Responsible waste  
1468 management follows the waste reduction hierarchy of: (i) source reduction, (ii) reuse, (iii) recycle,  
1469 reprocess, (iv) waste treatment, and (v) waste disposal.

1470 **d) Prevent the release of toxic and hazardous chemicals**

1471 An organization may be using toxic or hazardous chemicals in its activities, products or provision of  
1472 services. Toxic and hazardous chemicals both naturally occurring and anthropogenic can adversely  
1473 effect ecosystems and human health through acute (immediate) or chronic (long-term) impacts,

1474 **e) Prevent all identifiable forms of pollution**

1475 An organizations activities, products and services may cause other forms of pollution including; noise,  
1476 vibration, radiation, infectious agents (e.g., viral or bacterial) or biological hazards (e.g., invasive  
1477 species, uncontrolled spread of genetically modified organisms) negatively effecting health and  
1478 wellbeing of local or even global communities.

1479 **6.5.3.2 Related actions and/or expectations**

1480 To improve performance in the prevention of pollution an organization should:

1481 — [identify, measure, record and report on its significant pollution - from all activities, products and  
1482 services - including emissions to air, discharges to water and land, waste disposal, release of toxic  
1483 and hazardous chemicals and other forms of pollution;]

1484 — implement a program and set targets for preventing all forms of pollution to achieve better than  
1485 average performance considering relevant best practice indicators and other benchmarks, such as  
1486 regulation in countries with leading environmental laws;

1487 — establish a waste minimization and management system following the waste reduction hierarchy  
1488 and ensuring proper management of unavoidable waste;

1489 — publicly disclose the amounts and types of toxic and hazardous materials used and released  
1490 including the known human health and environmental risks over the entire life cycle;

1491 — implement a program to systematically identify and prevent the use of banned chemicals and,  
1492 where possible the use of chemicals identified as being of concern to stakeholders, from all  
1493 activities, products and services within its control or sphere of influence including supply chain.  
1494 Chemicals to avoid include (but are not limited to); ozone-depleting (Montreal Protocol (54)),  
1495 persistent organic pollutants (POPs) (Stockholm Convention (72), the Rotterdam Convention (71)),  
1496 hazardous pesticides (defined by the World Health Organization), and chemicals defined as  
1497 carcinogenic (including tobacco), mutagenic, toxic to reproduction, persistent and bio-  
1498 accumulative,(PBTs and vPvBs), endocrine disrupting<sup>3)</sup> .

1499 **6.5.4 Environmental issue 2: Sustainable resource use**

1500 **6.5.4.1 Description of the issue**

1501 Performance improvements in the prevention of pollution can be undermined by unsustainable rates  
1502 of consumption. An organization can improve its environmental performance by ensuring that it uses  
1503 electricity, fuels, raw and processed materials, land and water more responsibly. This can preserve  
1504 non-renewable resources and reduce environment burdens without limiting economic growth. An  
1505 organization can also promote sustainable resource use within its sphere of influence including supply

---

3) International Conference on Chemicals Management (ICCM) - Strategic Approach to International Chemicals Management (SAICM)

1506 chains. It can also promote sustainable consumption through marketing and communications aimed at  
 1507 re-orienting consumers towards more sustainable lifestyles and purchasing decisions (see section on  
 1508 Consumer Issues for guidance on consumers).

1509 **a) Use energy efficiently**

1510 An organization can implement energy efficiency programs to save money and reduce the energy  
 1511 demand for buildings, transportation, production processes, appliances and electronic equipment, and  
 1512 the provision of services. Lowering the demand for energy may reduce the indirect environmental  
 1513 burdens caused by energy generation while reducing overall energy costs for the organization.

1514 **b) Conserve water**

1515 Water is a fundamental human need and, therefore, a basic human right. The Millennium  
 1516 Development Goals include the provision of safe, reliable drinking water and sanitation services to all  
 1517 people. An organization can improve its social responsibility by conserving water and making  
 1518 decisions that protect fair and sustainable access to freshwater resources within its local watershed.

1519 **c) Use materials efficiently**

1520 Materials use causes numerous direct and indirect environmental burdens from the impact on  
 1521 ecosystems of mining, forestry and other extractive operations, to emissions resulting from the use,  
 1522 transport and processing of materials. An organization can implement materials efficiency programs to  
 1523 save money and reduce the environmental burden caused by the use of raw materials for production  
 1524 processes or finished products used in its activities and the delivery of services.

1525 **6.5.4.2 Expectations and/or related actions**

1526 An organization should:

1527 — [identify, measure, record and report its use of energy, water and materials for all activities,  
 1528 products and services;]

1529 — develop and implement an energy efficiency program to reduce energy use to achieve better than  
 1530 average performance considering best practice indicators and other benchmarks, and secure  
 1531 energy from renewable and low emission sources where possible;

1532 — develop and implement water efficiency plans to minimize water use and co-operate with  
 1533 stakeholders to manage water resources to ensure fair access for all users within a watershed;  
 1534 and

1535 — develop and implement a materials efficiency program to reduce materials use to achieve better  
 1536 than average performance considering best practice indicators and other benchmarks.

1537 **6.5.5 Environmental issue 3: Climate change mitigation and adaptation (63, 76)**

1538 **6.5.5.1 Description of the issue**

1539 Greenhouse gas (GHG) emissions, primarily from burning fossil fuels, are the leading cause of global  
 1540 climate change, which is having significant impacts on the natural and human environment (63).  
 1541 Among the trends observed are: rising sea levels, more frequent occurrences of extreme weather  
 1542 events, and changes to ecosystems, agriculture and fisheries. As climate change passes a tipping  
 1543 point, changes will be felt far more widely and acutely.

1544 Every organization is responsible for some GHG emissions (either directly or indirectly) and is  
 1545 impacted in some way by climate change. An organization should accept responsibility to both  
 1546 minimize its own GHG emissions (mitigation) and to plan for a changing climate (adaptation).

1547 Adapting to climate change has social implications in the form of effects on health, prosperity and  
1548 human rights.

1549 **6.5.5.2 Expectations and/or related actions**

1550 **a) Climate change mitigation**

1551 To mitigate climate change, an organization should:

1552 — [identify, measure, record and report on its GHG emissions for all activities, products and services  
1553 using methods defined in standards such as ISO 14064 and the WRI/WBCSD Greenhouse Gas  
1554 Protocol;]

1555 — commit to climate change mitigation by reducing direct and indirect GHG emissions associated  
1556 with its activities, products and services and those within its control and sphere of influence  
1557 including supply chains to achieve better than average performance. This should be done taking a  
1558 back-casting approach which involves setting performance targets for the future and implementing  
1559 programs to reduce GHG emissions overtime in order to meet those established targets;

1560 — improve the energy efficiency and reduce the overall energy use of its activities, products and  
1561 services;

1562 — reduce dependence on fossil fuels, and make use of low-emission technology and renewable  
1563 energy leading to reduced life cycle GHG emissions for activities (including transportation),  
1564 products and services wherever feasible;

1565 — prevent the release of GHG emissions (particularly those also causing ozone depletion) from  
1566 processes or equipment including heating, ventilation and air conditioning (HVAC) units;

1567 — consider measures to offset remaining GHG emissions through carbon sequestration or emissions  
1568 reduction programs striving for carbon neutrality; and

1569 — make use of flexibility mechanisms such as the Clean Development Mechanism under the UN  
1570 Framework Convention on Climate Change (76) to accelerate the introduction of sound  
1571 environmental technologies in different organizations.

1572 **Box 8 Examples of mitigation actions for various types of organizations**

1573 Governments and other organizations should co-operate to develop transportation systems that  
1574 achieve GHG emissions reduction;

1575 Scientists, academics and the media should provide the public with clear and easy to understand  
1576 information about climate change and GHG emissions;

1577 Businesses should develop energy-efficient and low emitting products and services

1578 Consumers should make purchasing decisions considering environmental impacts;

1579 Investors should consider the GHG emissions performance of organizations or activities in which they  
1580 invest; and

1581 NGOs should propose constructive solutions for addressing climate change and raise public  
1582 awareness of the issue.

1583 **b) Climate change adaptation**

1584 To reduce vulnerability to climate change, an organization should:

- 1585 — consider future climate predictions (with particular attention to extreme weather and increasing  
1586 variability and uncertainty) to identify risks and integrate climate change adaptation into decisions  
1587 to protect health and property with a preventative approach to managing risks;
- 1588 — identify opportunities to avoid or minimize damages from climate change and take advantage of  
1589 opportunities where possible, to proactively adjust for changing conditions;
- 1590 — plan for land use, zoning and infrastructure design and maintenance taking account of the  
1591 implications of a changing climate and greater climatic uncertainty and the possibility of  
1592 increasingly severe weather including floods, high winds or intense heat; and
- 1593 — develop agricultural, industrial, medical and a range of other technologies and techniques and  
1594 make them accessible to those in need, ensuring the security of drinking water, sanitation, food  
1595 and other resources critical to human health.

1596 **Box 9 Examples of adaptation actions for various types of organizations**

- 1597 Scientists and academics should provide decision-makers with information about impacts of climate  
1598 change and possible adaptive measures to reduce risk;
- 1599 Governments should establish strategies to protect water resources and infrastructure from climate  
1600 change impacts;
- 1601 Businesses should develop disaster-prevention and disaster-reduction technologies and implement  
1602 programs to protect human health and resources from climate change impacts;
- 1603 Public health Institutions should develop programs to predict, monitor and respond to the changing  
1604 patterns of disease that may be caused by climate change; and
- 1605 Authorities should create and adopt disaster-response plans and raise public awareness of  
1606 appropriate actions.

1607 **6.5.6 Environmental issue 4: Protection and restoration of the natural environment**

1608 **6.5.6.1 Description of the issue**

1609 Over the past 50 years, human activity has changed ecosystems more rapidly and extensively than in  
1610 any comparable period of time in history. Our rapidly growing demand for food, fresh water, fiber, fuel  
1611 and mineral resources has resulted in a substantial and often irreversible loss of habitat and the  
1612 diversity of life on earth (75). An organization can become more socially responsible by acting to  
1613 protect and restore the natural environment and the social and economic services provided.

1614 **a) Value, protect and restore ecological services**

1615 Ecosystems contribute to the wellbeing of society by providing services such as clean fresh water,  
1616 flood control, soil, pollinators, absorption and breakdown of toxics and greenhouse gases, natural  
1617 fibers, fisheries and recreation. However as ecosystems are degraded or destroyed they lose the  
1618 ability to provide these services. The ecosystem services framework is well-established as a scientific  
1619 and technical framework and is now being recognized as a means of structuring business transactions  
1620 (through proper valuation and/or trading of ecosystem services) and for regulatory and governance  
1621 purposes (for example, managing resources on a watershed basis.)

1622 The priority consideration should be to protect ecosystem integrity in order to retain natural resiliency  
1623 and adaptive capacity. Otherwise restoration efforts should be implemented, followed by  
1624 compensation to replace the services that have been depleted. However, it will not always be possible  
1625 to replace or otherwise offset the loss of these services, in which case organizations should provide  
1626 financial compensation for the loss of ecological services.

1627 **b) Value and protect biodiversity**

1628 Biodiversity is, "the variety of life in all its forms, levels and combinations. This includes ecosystem  
1629 diversity, species diversity, and genetic diversity" IUCN, UNEP and WWF (1991). Protecting  
1630 biodiversity includes terrestrial and aquatic species, genetic variability, and natural ecosystems.

1631 **c) Use land and natural resource sustainably**

1632 An organizations decisions regarding land and resource use may place burdens on the environment.  
1633 Most major decisions are made by public authorities, but other organizations play a role. An  
1634 organizations land use projects (e.g., agriculture, building and resource extraction) may protect or  
1635 degrade habitat, water, soils, and ecosystems ultimately affecting human health and the wellbeing of  
1636 society.

1637 **6.5.6.2 Expectations and/or related actions (4, 5, 9, 51, 53, 61)**

1638 An organization should:

- 1639 — [Identify potential adverse impacts of its activities, products and services on ecosystem services  
1640 and biodiversity and take measures to eliminate or minimize them;]
- 1641 — Participate in market mechanisms to internalize the cost of environmental burdens caused by its  
1642 activities, products and services and create economic value in protecting ecosystem services;
- 1643 — Seek first to avoid loss of natural ecosystems and then to restore ecosystems, and finally  
1644 compensate for losses leading to a net gain in ecological services over time;
- 1645 — Consider an integrated strategy for the administration of land, water and ecosystems that  
1646 promotes conservation and sustainable use in an socially equitable way;
- 1647 — Where endemic or endangered species may be adversely affected by its activities, products or  
1648 services, take measures to preserve these species and their habitats;
- 1649 — Use land in a more sustainable way by adopting sustainable development, design, agricultural and  
1650 operating practices considering the possible environmental burdens resulting from its land use  
1651 decisions;
- 1652 — Incorporate the protection of natural habitat, wetlands, forest, wildlife corridors, protected areas  
1653 and agricultural lands into the planning of the built environment expansion and development;
- 1654 — Adopt sustainable agricultural, fishing and forestry practices as defined in leading standards and  
1655 certification schemes; and
- 1656 — Avoid activities or approaches that lead to the extinction or extirpation of species, or the  
1657 distribution or proliferation of invasive species.

1658 **6.6 Fair operating practices**

1659 **6.6.1 Rationale**

1660 Fair operating practices deals with social responsibility in the context of relationships between  
1661 organizations This includes relationships between organizations and government agencies, as well as  
1662 between organizations and their partners, suppliers, contractors, competitors and the associations of  
1663 which they are a member.

1664 Fair operating practices improve the social and economic environment in which organizations function  
1665 by: encouraging fair competition, improving the reliability and fairness of transactions, preventing  
1666 corruption and promoting fair political processes. Organizations should use their relationship with

1667 other organizations to promote positive outcomes. This includes providing leadership and promoting  
1668 the adoption of social responsibility more broadly throughout the supply chain [sphere of influence].

## 1669 **6.6.2 Principles and considerations**

1670 Fair operating practices are the practical application of the principles of social responsibility in  
1671 relationships between organizations, in particular ethical conduct (see Clause 5).

## 1672 **6.6.3 Fair operating practices issue 1: Anti-corruption**

### 1673 **6.6.3.1 Description of the issue**

1674 Corruption is the abuse of entrusted power for illegitimate gain. Corruption has two aspects, active  
1675 and passive for example offering a bribe and the acceptance of a bribe. Corruption can take many  
1676 forms, for example bribery of domestic and foreign public officials, bribery in the private sector, conflict  
1677 of interest, fraud, money laundering and trading influence. Corruption undermines an organization's  
1678 ethical environment, and can put it at risk for criminal prosecution as well as civil and administrative  
1679 consequences. Amongst other effects corruption can also violate human rights, erode political  
1680 processes, damage the environment, distort competition and impede the redistribution of wealth and  
1681 economic growth.

### 1682 **6.6.3.2 Related actions and/or expectations**

1683 To prevent corruption and bribery, an organization should:

- 1684 — implement, apply and improve policies and practices that counter corruption, facilitation payments,  
1685 bribery and extortion;
- 1686 — support workers and agents in their efforts to eradicate bribery and corruption and provide  
1687 incentives for progress;
- 1688 — train and raise the awareness of employees and agents about corruption and how to counter  
1689 corruption;
- 1690 — confirm that the remuneration of its employees and agents is appropriate and for legitimate  
1691 services only;
- 1692 — encourage employees and agents to report violations of the organization's policies by adopting  
1693 mechanisms that enable reporting without fear or reprisal;
- 1694 — bring violations of the criminal law to the attention of the relevant law enforcement authorities; and
- 1695 — work to oppose corruption by influencing others to adopt similar practices.

## 1696 **6.6.4 Fair operating practices issue 2: Responsible political involvement**

### 1697 **6.6.4.1 Description of the issue**

1698 Organizations can support the political process and encourage the development of public policy that  
1699 benefits society at large. Organizations should avoid behaviour that can erode the political process  
1700 such as manipulation, intimidation, and coercion.

### 1701 **6.6.4.2 Related actions and/or expectations**

1702 An organization should:

- 1703 — train and raise the awareness of employees and agents about responsible political involvement  
1704 and contributions;
- 1705 — be transparent regarding its activities related to lobbying, political contributions and political  
1706 involvement;
- 1707 — establish controls to regulate the activities of paid lobbyists;
- 1708 — avoid political contributions that amount to an attempt to control policymakers in favour of a  
1709 specific cause; and
- 1710 — avoid lobbying activities that involve misinformation, misrepresentation, threat or compulsion.

### 1711 **6.6.5 Fair operating practices issue 3: Fair competition**

#### 1712 **6.6.5.1 Description of the issue**

1713 Fair and widespread competition stimulates efficiency, reduces the costs of goods and services,  
1714 promotes innovation, ensures all organizations have equal opportunities, encourages the  
1715 development of new or improved products or processes and, in the long run, enhances economic  
1716 growth and living standards.

1717 Anti-competitive behaviour impedes competition and offsets the benefits of fair competition. There are  
1718 many forms of anti-competitive behaviour, some examples include practices such as: price fixing  
1719 where parties collude to sell the same product or service at the same price; bid rigging, where parties  
1720 collude to fix a competitive bid; and predatory pricing, selling a product at very low price with the intent  
1721 of driving competitors out of the market.

#### 1722 **6.6.5.2 Related actions and/or expectations**

1723 To promote fair competition, an organization should:

- 1724 — conduct its activities in a manner consistent with competition legislation and co-operate with  
1725 competition authorities;
- 1726 — establish procedures and other safeguards to prevent engaging in or being complicit in anti-  
1727 competitive behaviour;
- 1728 — promote employee awareness of the importance of compliance with competition legislation and  
1729 fair competition; and
- 1730 — support public policies that encourage competition, including anti-trust and anti-dumping practices  
1731 and local regulations.

### 1732 **6.6.6 Fair operating practices issue 4: Promoting social responsibility**

#### 1733 **6.6.6.1 Description of the issue**

1734 An organization can influence other organizations through the exercise of its purchasing power as well  
1735 as through leadership and mentorship to promote broader-scale adoption and support of principles of  
1736 social responsibility. It can also stimulate demand for socially responsible goods and services. These  
1737 actions should not be viewed as replacing the role of authorities to implement and enforce laws and  
1738 regulations.

#### 1739 **6.6.6.2 Related actions and/or expectations**

1740 An organization should:

- 1741 — incorporate ethical, social and environmental criteria, including health and safety, in its purchasing
- 1742 and contracting policies;
- 1743 — encourage other organizations to adopt similar policies;
- 1744 — carry out relevant and appropriate investigations and monitoring of the organizations with which
- 1745 they have relationships so that their actions do not compromise the organization's commitments
- 1746 to social responsibility;
- 1747 — promote fair sharing of the costs and benefits of implementing socially responsible practices
- 1748 throughout the supply chain; and
- 1749 — actively participate in raising the awareness of organizations with which they have relationships on
- 1750 social responsibility issues and principles.

## 1751 **6.6.7 Fair operating practices issue 5: Respect for property rights**

### 1752 **6.6.7.1 Description of the issue**

1753 Property rights cover both physical property and intellectual property and include interest in land,  
 1754 copyrights, patents, moral rights and other rights. They also extend to rights that may not be  
 1755 recognized in law, such as traditional knowledge of specific groups or the intellectual property of  
 1756 employees.

1757 Recognition of property rights promotes investment, economic and physical security as well as  
 1758 encouraging creation and invention.

### 1759 **6.6.7.2 Related actions and/or expectations**

1760 An organization should:

- 1761 — implement policies and practices that promote respect for property rights;
- 1762 — conduct proper investigations to be confident it has legitimate ownership to use or dispose of
- 1763 property;
- 1764 — not engage in activities that violate property rights, including counterfeit and piracy, or otherwise
- 1765 infringe consumer interests; and
- 1766 — pay fair compensation for property that it acquires or uses.

## 1767 **6.7 Consumer issues**

### 1768 **6.7.1 Rationale**

1769 Consumer decisions have a strong influence on the success of organizations. An organization can  
 1770 therefore gain by engaging with consumers and consumer organizations to evaluate and improve  
 1771 products and services. The result of such engagement is that the organization's outputs will better fit  
 1772 the expectations of consumers, demand may rise and the potential for conflict can be reduced.

1773 Consumers expect an organization to:

- 1774 — treat them fairly;
- 1775 — have respect for their rights;
- 1776 — provide information that enables making informed decisions;

1777 — assume responsibility for the safety, performance and support of its products and services; and

1778 — offer effective dispute resolution.

1779 By taking these expectations seriously, an organization can enhance its reputation of being a socially  
1780 responsible organization in the eye of consumers and minimize the risk of damage to its reputation.

1781 Consumers contribute to sustainable development if they have choice and adequate and accurate  
1782 information to make informed decisions. An organization should provide consumers with products and  
1783 services that are environmentally and socially beneficial. It should also offer information about the  
1784 conditions under which products and services are produced and/or delivered and about the effects of  
1785 the products or services on consumer health and the environment.

## 1786 6.7.2 Principles and considerations

1787 The **United Nations Guidelines for Consumer Protection** is the most important inter-national norm  
1788 of behaviour in the realm of consumer protection. The UN General Assembly adopted it in 1985 by  
1789 consensus. In 1999 it was expanded to include elements on sustainable consumption. It calls upon  
1790 states to protect consumers from hazards to their health and safety, promote and protect the  
1791 economic interests of consumers, enable them to make informed choices, provide consumer  
1792 education, make available effective consumer redress, guarantee freedom to form consumer groups  
1793 and promote sustainable consumption patterns.

1794 The issues addressed below are primarily based on the following principles:

1795 — respect for the rule of law;

1796 — respect for international [norms] [expectations] of behaviour;

1797 — transparency;

1798 — ethical behaviour; and

1799 — precautionary approach.

## 1800 6.7.3 Consumer issue 1: Fair marketing, information and contractual practices

### 1801 6.7.3.1 Description of the issue

1802 Fairness, transparency and care are key principles that help organizations to build a constructive and  
1803 lasting relationship to consumers. When marketing organizations should ensure that presentations are  
1804 complete, clear, accurate, truthful and understandable. When engaging in contracts terms and  
1805 conditions should be fair.

1806 Special care should be taken when dealing with vulnerable consumers who are unaware of their rights  
1807 and responsibilities or hindered to act on their knowledge. Vulnerable consumers include children and  
1808 youth, the aged, the illiterate and people with disabilities, including intellectual impairment. Some  
1809 wholly depend on information provided by the organization through advertising and other marketing  
1810 practices.

### 1811 6.7.3.2 Expectations and/or related actions

1812 When communicating with consumers, an organization should

1813 — not engage in any practices that are deceptive, misleading, fraudulent or unfair, including critical  
1814 omissions of information;

- 1815 — clearly identify advertising and marketing;
- 1816 — openly disclose total prices, eventual taxes (such as VAT), terms and conditions of the products
- 1817 and services as well as any accessories or delivery costs;
- 1818 — substantiate claims or assertions by providing underlying facts and information;
- 1819 — provide complete, accurate and understandable information that is comparable on:
- 1820 — hazardous materials and chemicals contained in or released by products;
- 1821 — all relevant aspects of a product or service taking into account ideally the full life cycle (e.g.
- 1822 save use, maintenance, storage, disposal and after-sales service, including refund policies,
- 1823 complaints handling and dispute resolution including locations and if appropriate, costs);
- 1824 — the key quality aspects of products and services using standardized test procedures, for
- 1825 example colour-fastness, washing performance and durability using when possible average
- 1826 performance or best practice as benchmarks;
- 1827 — health and safety aspects of products and services, including conformity to relevant national,
- 1828 regional or international laws and regulations as well as standards and other specifications
- 1829 establishing a higher level of protection compared to baseline requirements required by law;
- 1830 and
- 1831 — financial and investment products.
- 1832 — assess the organization's advertising for compliance with law, internationally recognized
- 1833 standards and fairness.
- 1834 In contracts, an organization should:
- 1835 — not use unfair contract terms, such as the exclusion of liability, the right to unilaterally change
- 1836 prices and conditions, transfer of risk of insolvency to consumers or unduly long length of
- 1837 contracts;
- 1838 — provide clear and sufficient information about prices, terms, conditions and costs associated with
- 1839 the transaction and specify the organization's physical address including phone number when
- 1840 selling products over distance or in the internet.

#### 1841 **6.7.4 Consumer issue 2: Protecting consumers' health and safety**

##### 1842 **6.7.4.1 Description of the issue**

1843 Regulatory authorities and standards writing bodies cannot keep up with the rapid pace of global  
 1844 change in product design, construction and materials and thereby ensure that appropriate safety  
 1845 requirements are in place. Globalization has led to the increase of cross- border movement of  
 1846 products and sourcing of services and this puts strain on regulatory and testing resources.

1847 An organization has the responsibility to ensure that its products and services are safe and do not  
 1848 carry risk of harm when used or consumed by consumers as directed, indicated or reasonably  
 1849 foreseeable misused. This implies that an organization should anticipate potential risks of their  
 1850 products and services which are used by consumers by taking action to avoid harm or danger.

1851 In order to minimise risk from usage of its products or services an organization should be guided by  
 1852 the ethical conduct and precautionary principles. Failing to do so might have dangerous  
 1853 consequences for individuals and the environment. This would contradict the objectives of a  
 1854 sustainable development and also the reputation of the organization might be damaged. Since not all  
 1855 risks can be foreseen, an organization should also establish a mechanism for product recall.

**6.7.4.2 Expectations and/or related actions**

In protecting the health and safety of consumers an organization should focus on the following issues and pay special attention to vulnerable groups who might not have the capacity to recognize or assess potential dangers:

- provide products and services which, under normal and reasonably foreseeable conditions of use, are safe for the user, his/her property, other persons and the environment;

- assess the adequacy of health and safety laws, regulations, standards and other specifications to ensure that all health and safety aspects are adequately addressed. In cases where accidents are reported involving products or services that conform to regulation, standards or other specifications, or when alternative product designs have been developed which can reduce the number and/or severity of accidents or when independent product tests show that goods and services of other providers are better rated, the organization should go beyond these minimum requirements to achieve the best possible protection level;

- minimize risks in the design of products:

- identify the likely user group(s) and pay special care to vulnerable groups;

- identify the intended use and assess the reasonably foreseeable misuse of the product, process or service;

- identify each hazard arising in all the stages and conditions of use of the product, process or service, including installation, maintenance, repair and destruction/disposal, for example mechanical (entrapment, choking, suffocation, etc), chemical, thermal, electrical, acoustic, drowning;

- estimate and evaluate the risk to each identified user/contact group arising from the hazards identified; and

- reduce the risk. When reducing risks, the order of priority should be: Inherently safe design, protective devices and information for users.

- [avoid the use of products that may be carcinoengic, mutagenic, toxic for reproduction, or that are persistent and bio-accumulative. if such products are used, they should be clearly labelled;]

- not introduce or use products or services where a significant proportion of the population has expressed strong reservations or even opposition to such products or services;

- when new materials and/or production methods are introduced, organizations should perform an [independent third-party] human health risk assessment of products and services before their introduction. all relevant documentation should be made publicly available;

- convey vital safety information to consumers, wherever possible using symbols, preferably internationally agreed ones, in addition to the textual information;

- instruct consumers in the proper use of products and inform them of the risks involved in intended or normally foreseen use;

- suppliers, exporters, importers, retailers and other related organizations should adopt measures that prevent products from becoming unsafe through improper handling or storage while in their care.

Even if these recommendations are followed, there might be instances in which a risk was not foreseen. To be prepared for these cases, the organizations should establish a mechanism for product recall. That implies that an organizations should:

- 1898 — establish a system to trace products through the production and distribution chain to be able to
- 1899 recall products;
- 1900 — operationalize a system for product recall;
- 1901 — if a product, after having been placed on the market, turns out to present an unforeseen hazard or
- 1902 series defect, or contains misleading or false information an organization should:
- 1903 — notify the relevant authorities, the media and through web sites in all countries where the
- 1904 product was sold, even if sold by other organizations. in so doing, an organization should
- 1905 clearly:
- 1906 — identify the product and when it was produced. use illustrations to raise awareness of the
- 1907 product and the recall;
- 1908 — specify the kind of risk posed by the product and about how to avoid it;
- 1909 — explain what consumers should do to return the product; and
- 1910 — give information on the type of compensation for consumers.
- 1911 — depending on the severity of the harm or injury a product can cause, recall all products that are
- 1912 still in the distribution chain and label products or their packaging;
- 1913 — take additional measures to inform vulnerable groups and people living in rural areas; and
- 1914 — repair, replace, modify or substitute another product for the defective product or refund as soon
- 1915 as possible.

### 1916 **6.7.5 Consumer issue 3: Sustainable consumption**

#### 1917 **6.7.5.1 Description of the issue**

1918 The principle 8 of the 1998 Earth Summit, Agenda 21 states that to achieve sustainable development  
 1919 and a higher quality of life for all people, states should reduce and eliminate unsustainable patterns of  
 1920 production and consumption and promote appropriate demographic policies. Organizations should  
 1921 contribute their part to sustainable consumption by implementing more sustainable production  
 1922 processes, by designing environmentally and socially beneficial products and services and by offering  
 1923 consumer information about both the performance of an organization and its products and services  
 1924 relating to social responsibility.

1925 Consumers play a pivotal role in fostering a sustainable development by considering social and  
 1926 environmental performance of products and services in their purchasing decisions.

#### 1927 **6.7.5.2 Expectations and/or related actions**

1928 The organization should do the following to offer consumers socially and environmentally beneficial  
 1929 products and services and prevent the environment and society from being adversely affected:

- 1930 — offer sustainable products and services that operate as efficiently as possible, considering the full
- 1931 life cycle. this should be done by identifying the environmental performance of the most efficient
- 1932 products or services, and by largely eliminating stand-by losses of energy;
- 1933 — eliminate and minimize where possible any negative health and environmental impacts of
- 1934 products and services, such as noise and waste;
- 1935 — design products so that they can be easily reused, repaired or recycled;

- 1936 — reduce waste by minimizing packaging material and if appropriate, offer recycling and disposal  
1937 services; and
- 1938 — provide and inform consumers about adequate disposal systems and statement as to second  
1939 hand use and final disposition.
- 1940 To enable consumers to consume in a sustainable manner an organization should:
- 1941 — provide consumers with information about the environmental and social conditions under which  
1942 the products or services were produced or delivered. the information should take into account the  
1943 value chain and also include information on resource efficiency where relevant;
- 1944 — provide consumers with information about the sustainability of products and services. this should  
1945 include information on the performance, country of origin, energy efficiency (where applicable),  
1946 contents or ingredients (including where appropriate, reference regarding the use of GMOs),  
1947 impact on health, side effects, safe use, maintenance, storage and disposal of these products  
1948 and their packaging. This should be based on average performance or best practice; and
- 1949 — make use of eco-label schemes and/or other benchmarks to communicate the environmental and  
1950 social qualities of products and services.<sup>4)</sup>
- 1951 To give consumer broadest access to products and services, organizations should employ the  
1952 principles of universal design. Organizations should, for example:
- 1953 — make efforts so that information about products and services is accessible to people with  
1954 disabilities, e.g. by providing the information for people without vision in other forms than visual  
1955 such as tactile warnings;
- 1956 — create websites which are in compliance with web accessibility guidelines of the World Wide Web  
1957 Consortium (W3C);
- 1958 — display the information on products and services such as texts in leaflets or price tags in shops in  
1959 a manner so that people with reduced vision do not encounter difficulties reading it; and
- 1960 — provide information on the accessibility (usability for elderly and disabled persons) of products and  
1961 services using national, regional or international standards and other specifications.
- 1962 **6.7.6 Consumer issue 4: Consumer service, support, and dispute resolution**
- 1963 **6.7.6.1 Description of the issue**
- 1964 Even the best organization cannot guarantee that its products and services perform as intended and  
1965 that consumers will know how to use them. It is therefore important that organizations establish  
1966 channels for communication to ensure that consumers are treated fairly even after products and  
1967 services are bought or provided.
- 1968 **6.7.6.2 Expectations and/or related actions**
- 1969 An organization should:
- 1970 — engage in precautionary measures to prevent complaints<sup>5)</sup> by offering consumers the option to  
1971 return products within a specific time period;

---

4) For guidance see: ISO 14021, 14024 and 14025.

- 1972 — offer guarantees for a certain period of time exceeding any warranty periods guaranteed by law,  
 1973 providing free repair or exchange of faulty products or remedy of non-satisfactory services,  
 1974 [providing all transportation and packaging costs and making replaceable parts and consumables  
 1975 available during the life of the product];
- 1976 — clearly communicate to consumers how they can access after-supply services and support as well  
 1977 as dispute resolution and redress mechanisms<sup>6)</sup>, for example by providing contact information on  
 1978 a product label;
- 1979 — offer adequate and efficient support systems, for example hotlines with minimal waiting times and  
 1980 competent advice;
- 1981 — provide mechanisms for the consumer to return and to be refunded for products acquired on  
 1982 distant-selling purchases;
- 1983 — regularly evaluate consumer satisfaction or consumer's emotional experiences concerning  
 1984 products and services, support, maintenance and repair systems using standardized methods;
- 1985 — offer maintenance and repair at a reasonable price and make transparent the expected availability  
 1986 of spare parts for products;
- 1987 — make use of alternative dispute resolution mechanisms and conflict resolution and redress  
 1988 procedures that are based on national or international standards and that do not impose a fee or  
 1989 charge for accessing or using the process<sup>7)</sup> ;
- 1990 — provide appropriate remedies to customers, for example compensation within a specified period of  
 1991 time, which can be given directly from the organization to consumers or through their agents  
 1992 world-wide; and
- 1993 — not require consumers to waive their rights to seek legal recourse when they use dispute  
 1994 resolution mechanisms.
- 1995 **6.7.7 Consumer issue 5: Consumer data protection and privacy**
- 1996 **6.7.7.1 Description of the issue**
- 1997 Personal data is widely collected and processed by public and private entities and has the potential of  
 1998 being misused. An organization should do its part to ensure that the privacy of consumers, especially  
 1999 personally identifiable information, is respected.
- 2000 **6.7.7.2 Expectations and/or related actions**
- 2001 To prevent personal data collection and processing from impairing privacy, an organization should be  
 2002 guided by the following principles and take the recommended actions:
- 2003 — sparsity: an organization should limit the collection of personal data, and any such data should be  
 2004 obtained by lawful and fair means. when not required by law data collection should be either  
 2005 essential for the provision of products or services or provided voluntarily by the consumer. an  
 2006 example of essential data is the address to which a product should be delivered;

---

5) Fair trading codes of conduct can promise standards of quality of products and/or service delivery. For guidance see: Quality Management: Customer Satisfaction--Guidelines for Codes of Conduct (ISO 10001)

6) For guidance see: Quality Management: Customer Satisfaction--Guidelines for Complaints Handling (ISO 10002) and Quality Management: Customer Satisfaction--Guidelines for External Customer Dispute Resolution (ISO 10003)

7) Op cit

- 2007 — purpose specification: the purpose for which personal data are collected should be specified by  
2008 the organization not later than at the time of data collection;
- 2009 — use limitation: personal data should not be disclosed, made available or otherwise used for  
2010 purposes other than those specified except: (a) with the informed and voluntary consent of the  
2011 data subject which means that the consumer needs to be informed about how data will be used  
2012 and the consent needs to be given freely; or (b) by the authority of law;
- 2013 — security safeguards: organizations should protect personal data by reasonable security  
2014 safeguards against such risks as loss or unauthorized access, destruction, use, modification or  
2015 disclosure of data;
- 2016 — openness: there should be a general policy of openness about developments, practices and  
2017 policies with respect to personal data. Means should be readily available of establishing the  
2018 existence and nature of personal data, and the main purposes of their use, as well as the identity  
2019 and usual location of the data controller;
- 2020 — individual participation: an individual should have the right to obtain from a data controller  
2021 confirmation of whether the data controller has data relating to him or her and to challenge data  
2022 relating to him or her. if the challenge is successful, the data should be erased, rectified,  
2023 completed or amended;
- 2024 — accountability: a data controller should be accountable for complying with measures that give  
2025 effect to the principles stated above; and
- 2026 — ethical conduct: Personal data should not be misused for marketing and spamming unless the  
2027 consumer has consented to this voluntarily.

2028 **6.7.8 Consumer issue 6: Access to essential products and services**

2029 **6.7.8.1 Description of the issue**

2030 [Low-income] consumers [, especially in developing countries,] often do not have access to essential  
2031 products and services such as water, basic food, healthcare, housing, energy, education,  
2032 telecommunication and financial services impairing on their human rights. Governments should make  
2033 provision for all people, especially those with low-incomes or those in rural or remote areas, to have  
2034 access to these essential products and services.

2035 **6.7.8.2 Expectations and/or related actions**

- 2036 — governments should develop a suitable institutional framework so that all consumers have access  
2037 to essential products and services at affordable prices;
- 2038 — organizations that provide essential products and services should offer everyone, regardless of  
2039 financial capabilities and location, adequate access to these products and services at affordable  
2040 prices, even in circumstances in which they are not legally required to do so;
- 2041 — public and private organizations that provide essential products and services should operate in a  
2042 transparent manner, providing information related to the setting of prices, or charges covered.

2043 **6.7.9 Consumer issue 7: Education and awareness**

2044 **6.7.9.1 Description of the issue**

2045 Consumers are vital actors in the life cycle of products and services. To enable consumers to be well-  
2046 informed, conscious of their rights and responsibilities and consume responsibly, they should be

2047 educated. Special attention should be given to the needs of disadvantaged consumers both in rural  
2048 and urban areas, including low-income consumers and those with low or non-existent literacy levels.

2049 The aim of consumer education should not only be to transfer knowledge, but also to provide practice  
2050 in acting on this knowledge. Thus, in addition to content, educational projects should teach skills for  
2051 assessing products and services and for making comparisons. They should also raise awareness  
2052 about the impact of consumption choices on others, including the environment.

#### 2053 **6.7.9.2 Expectations and/or related actions**

2054 In educating consumers an organization should specifically focus on:

2055 — health and safety;

2056 — information on appropriate regulations, how to obtain redress and agencies and organizations for  
2057 consumer protection;

2058 — product hazards;

2059 — product labelling;

2060 — information on weights and measures, prices, quality, credit conditions and availability of basic  
2061 necessities;

2062 — financial and investment products;

2063 — environmental protection;

2064 — efficient use of materials, energy and water;

2065 — sustainable consumption; and

2066 — disposal of packages and products.

### 2067 **6.8 Development of the community and society**

#### 2068 **6.8.1 Rationale**

2069 Social development, together with economic development and environmental protection, form the  
2070 basis for a sustainable society. Although the primary responsibility for social and economic  
2071 development belongs to governments, all organizations have the potential to contribute to social and  
2072 economic development.

2073 This influence is generally most significant in an organization's local community but may also reach  
2074 out to all communities within its sphere of influence.

2075 Community involvement is a process by which an organization and its community stakeholders get  
2076 acquainted, learn to respect their different roles, visions and interests and build trust. The result of this  
2077 process is co-operation for social and economic development, with justice and equity as its core  
2078 elements. An organization may contribute through specific programs in support of community and  
2079 society issues or by aligning its activities with the creation of a positive contribution..

2080 Economic development is the process by which economic activities increase and become diversified  
2081 in order to better satisfy needs of the society. Achieving higher levels of income and wealth should be  
2082 accompanied by a balanced distribution of the outputs of the economic development process in order  
2083 to benefit society as a whole.

2084 Social development refers to those conditions that constitute a decent standard of living, such as  
2085 health, education and housing and the overall wellbeing of society.

2086 Social and economic development are interdependent and an organization's influence and  
2087 contribution can be greatly enhanced by community involvement processes.

2088

2089 An organization that is aware of its influence and contributes to development of the community and  
2090 society will create better relations with its stakeholders, an enhanced reputation, and more efficient  
2091 risk and opportunity management.

## 2092 6.8.2 Principles and considerations

2093 International instruments such as the Millennium Declaration and the Copenhagen Declaration  
2094 express basic principles concerning contribution to the community and society. These invite all  
2095 organizations to contribute to the goals and compromises that nations have assumed.

2096 For guidance on social development principles see Clause 5 Principles of social responsibility.

2097 The following are considerations that an organization should take into account when addressing social  
2098 development:

2099 — promotion of fair treatment: organizations should promote fair treatment with respect to criteria  
2100 such as race, ethnic origin, gender, sexual orientation, religion, disability, age and disadvantage;

2101 — empowerment: organizations should take actions that empower people to maximize their own  
2102 capabilities, resources and opportunities;

2103 — work in partnership: combining capabilities in a partnership, such as the exchange of experience,  
2104 resources and efforts among organizations, makes the combined economic and social  
2105 development actions more effective than any individual action. partnerships can include many  
2106 different types of organizations and can operate at international, national, regional or local level;  
2107 and

2108 — promotion of income and wealth generation and their fair distribution.

## 2109 6.8.3 Development of the community and society issue 1: Community involvement

### 2110 6.8.3.1 Description of the issue

2111 To be successful in achieving its objectives, an organization needs relationships with all its  
2112 stakeholders that are based on respect and trust. Building relationships within a community takes time.

2113 Recognizing stakeholder expectations and promoting the right of stakeholders to be consulted and to  
 2114 participate in decision making will help create positive relationships and will help align the  
 2115 organization's objectives with the needs of the community.

2116 To address community involvement issues, organizations should consider consultation, dialogue and  
 2117 negotiation, as well as community empowerment and social investment in the community.

2118 Consultation, dialogue and negotiation offer valuable opportunities to improve the relationship  
 2119 between an organization and the communities in which it operates. Understanding the characteristics  
 2120 and composition of communities affected by the organization is central to ascertaining the  
 2121 organization's impacts and designing appropriate measures to address these impacts.

2122 Two of the major challenges of community involvement are to secure fair and equitable representation  
 2123 for community members and be confident that they have the skills to negotiate and to express their  
 2124 interests.

2125 By understanding its changing impacts on society an organization will be able to adapt its activities to  
 2126 society's best interests as well as its own. An organization that considers its present and past impacts  
 2127 on, and experience with the community, will be better equipped to address community involvement  
 2128 issues.

2129 With respect to social investment, the aim should be to align the organization's contribution with the  
 2130 needs of the communities in which the organization invests.

#### 2131 **6.8.3.2 Expectations and/ or related actions**

2132 To contribute to community and society through involvement in the community an organization should:

2133 *Note to IDTF: LTF recommended integrating Impacts on the community from WD3 into clause 7.3.*  
 2134 *The drafting team believes that Impacts on the community belongs under section 6.8.3.2 as appears*  
 2135 *in the next three bullets and Box 17.*

2136 — identify and responsibly manage the key social, environmental and economic impacts of its past,  
 2137 present and planned operations on the community;

2138 — gather information on the community to determine the main impacts and the main development  
 2139 issues in the local community; and

2140 — compensate fairly those affected by unavoidable negative impacts. The affected community  
 2141 should be involved in the determination of appropriate compensation.

#### 2142 **Box 17 [Example of managing environmental impacts on the community]**

2143 A company analyses its impact on a river located in a community and develops technology to treat the  
 2144 water it discharges into the river, so that the wastewater is cleaner than before it was extracted. The  
 2145 local community takes advantage of this new situation and uses the river for recreation purposes.

2146 — give the community access to relevant information and undertake meaningful communication (see  
 2147 also clause 5.2.4 for the accountability principle;

2148 — when engaging with community stakeholders, the organization should include previously ignored  
 2149 stakeholders as well as familiar stakeholders on new topics and in new ways. It is important to  
 2150 identify not only dominant local groups, but also vulnerable and marginalized groups, for example  
 2151 indigenous people or religious minorities;

#### 2152 **Box 18 Examples of consultation and dialogue**

2153 Governments involve the community in the development of city planning.

2154 NGOs involve the community in the planning, implementation, monitoring and evaluation of their  
2155 community-based programmes.

2156 During the construction period of a new project, a company, together with the local government and  
2157 an environmental NGO implement a community forum. The goals are to listen to the stakeholders'  
2158 concerns and expectations and to manage the project's impacts on the community.

2159 — Build and strengthen capacity in the community to negotiate and express their interests, by  
2160 identifying and assessing community stakeholder needs in terms of both resources, for example  
2161 staff, money and time, and in terms of competencies, for example expertise and experience. For  
2162 a community to become an effective partner in the process of involvement it should be  
2163 empowered to do so.

2164 — Negotiate with community stakeholders in good faith, that is, with an open mind, a willingness to  
2165 engage in the process and a genuine desire to reach agreement.

2166 **Box 19 Example of strengthening capacity in the community to negotiate and to express their**  
2167 **interests**

2168 An organization with significant environmental impacts in the neighboring community, that complies  
2169 with local environmental laws, creates a Community Environmental Committee to engage affected  
2170 parties in its decision making process and to address these impacts. Technical support is provided by  
2171 the local government's environment department and local health service. By partnering with an NGO,  
2172 the organization develops an environmental training program for community representatives. In every  
2173 session, the organization gives material information and makes performance improvement  
2174 commitments. These are monitored by the community and the local authorities.

2175 — Make social investments in the community that are related to its impact on society and the  
2176 environment. Its investments in the community should be in proportion to the risk and impacts the  
2177 organization is likely to create for the community;

2178 — Orient, where appropriate, social investment towards capacity building in the community;

2179 — Recognize that an organization's social investment does not preclude other social actions and  
2180 philanthropy, for example grants, volunteering and donations. These however, should be aligned  
2181 with the organization's overall social investment aims. They should focus on giving resources to  
2182 the community through programs or projects for long-term development;

2183 — Promote sustainable social investment projects, by involving the community in their design and  
2184 development. Community involvement will help projects to survive and prosper when the  
2185 organization is no longer involved;

2186 — Take into account the promotion of economic, social and human development in planning social  
2187 investments. All actions should broaden the opportunities for citizens, for example increasing  
2188 local procurements and outsourcing to support local business development;

2189 — Within the context of social responsibility, take into account the value of aligning organizational  
2190 contributions to the community with local and national policy priorities. This will increase the  
2191 probability of a successful and sustainable social investment;

2192 — Avoid actions that perpetuate a community's dependence on the organization's philanthropic  
2193 activities;

2194 — Take special care concerning involvement in poor host communities; and

2195 — Assess existing community-related initiatives, provide feedback on their success and suitability  
2196 and identify where improvements might be made.

2197	<b>Box 20 [Examples of social investment in communities]</b>
2198	— A company seeks to increase procurement in a local community. It builds local capacity by
2199	engaging with local people to supply services such as gardening, laundry service, vehicle
2200	maintenance and recycling.
2201	— A timber company exports certified products. In partnership with an NGO, it helps small producers
2202	to obtain the certification by providing technical assistance and training as well as financial
2203	resources. This action contributes to the integration of these small producers into its supply chain.
2204	— A Government asks its procurement specialist that historically underutilized businesses be
2205	included in all bids.
2206	— A corporation promotes active supplier diversity initiatives and program including technology
2207	support and working capital.
2208	<i>Note: LTF recommended integrating the following Consultation, dialogue and negotiation up to and</i>
2209	<i>including Box 18 into clause 7.3. The drafting team agreed to move the following. Final agreement not</i>
2210	<i>yet received from TG-6.</i>
2211	— <i>[Give stakeholders the right to be heard and accept the obligation to be accountable to these</i>
2212	<i>stakeholders] Recommend to move to section 7.3.</i>
2213	— <i>[In time, strategic partnerships may develop between an organization and the community and/or</i>
2214	<i>other stakeholders, such as government or NGOs]. Recommend to move to section 7.3</i>
2215	<b>6.8.4 Development of the community and society issue 2: Contribution to economic</b>
2216	<b>development</b>
2217	<b>6.8.4.1 Description of the issue</b>
2218	The process of economic development is fundamental for the increase of incomes with broad
2219	consequences in the society. Access to goods and services provided by higher incomes tend to
2220	improve life expectancy, allow the achievement of higher levels of education, to a better health and
2221	contribute to human rights protection.
2222	The economic development of a society depends on the public policies regarding governance, the rule
2223	of law, regulation, economic policies, property rights, etc. However all organizations and their
2224	operations have an effect on the whole economy and its development at an international, national or
2225	local level. Often their main impacts, both positive and negative, are at the local level. Economic
2226	development not only helps to overcome social problems but also may strengthen the organizations
2227	involved.
2228	Employment is an internationally recognized goal regarding economic development. By creating
2229	employment, organizations can make an important contribution to fighting poverty and promoting
2230	development.
2231	Income from taxes provides the means for authorities to manage and develop infrastructure, for
2232	example transportation, and public services, such as education. Governments play an important part
2233	when establishing and managing fair tax systems and in the effective use of revenues. Civil society
2234	organizations can contribute to the functioning of a tax system and to the efficient use of resources by
2235	the scrutiny of these activities of government.
2236	There is a huge potential in innovation, technology and science for an organization to develop goods
2237	and services that can contribute to sustainable development. To overcome under-development and its
2238	associated problems, countries need, amongst other things, access to modern technology.

2239 Economic development depends largely on investments, on the efficient use of resources and on  
2240 productivity. Responsible investment is a means by which investors may give preference to activities  
2241 beneficial to society, which can be viewed as a contribution to the present and future welfare of  
2242 society.

#### 2243 6.8.4.2 Expectations and/ or related actions

2244 An organization should:

2245 — Consider the impact of its investment decisions on employment creation, and where viable, direct  
2246 investments to areas with high levels of poverty;

2247 — Consider the impact of technology choice on employment, and where viable, select technologies  
2248 that maximise employment opportunities.

2249 — Constantly improve its productivity and/or efficiency in order to maximize its value added to the  
2250 economy

2251 — Consider engaging in partnership with local organizations, where mutually beneficial, for example  
2252 universities or research laboratories and where appropriate, perform its scientific and  
2253 technological development in the local community and employ local people in this work;

2254 — Where feasible, adopt practices that allow technology transfer and diffusion. Where applicable the  
2255 organization should set reasonable terms and conditions for licenses or technology transfer so as  
2256 to contribute to long term local development

2257 — Consider the impact of outsourcing decisions on employment creation, both within the  
2258 organization making the decision and within external organizations affected by such decisions.

2259 — Use resources efficiently including seeking to make multiple uses of natural resources and  
2260 endeavouring to use resources in a way that helps to alleviate poverty;

2261 — [Uphold and promote respect for property rights] *(Note to IDTF: This may be addressed in Fair*  
2262 *operating practices)*

2263 — Obtain prior informed consent of the local community for the use of local natural resources and  
2264 respect the traditional use of natural resources by local populations, in particular indigenous  
2265 people;

2266 — Give preference to local suppliers of goods and services and, where possible, contribute to local  
2267 supplier development;

2268 — Fulfil its tax responsibilities and provide the authorities with the necessary information to correctly  
2269 determine its taxes. An organization should refrain from seeking or accepting tax exemptions not  
2270 contemplated in the statutory or regulatory framework;

2271 — [Adapt its transfer pricing practices to the arm's length principle.] *(Note to IDTF: Drafting Team*  
2272 *recommends addressing this clause in Fair operating practices, final agreement not yet received)*

2273 — [Refrain from entering into agreements with host country fiscal authorities when the purpose of the  
2274 agreement is to suppress information that could be used to hold these authorities accountable;]  
2275 *(Note to IDTF: Drafting Team recommends addressing this clause in Fair operating practices,*  
2276 *final agreement not yet received)*

2277 — Consider the environmental, social and corporate governance aspects and the social  
2278 responsibility of the organizations in which they invest or seek to invest

2279 — Make use of shareholder rights to improve the social performance of organizations in which they  
2280 have invested

2281 — Consider possible positive impacts on host communities in decision making concerning  
2282 investments

2283 **Box 14 Examples of contribution to economic development**

2284 A large pulp and paper company that owns a forest plantation sells to small local businesses part of  
2285 its forest stocks.

2286 A state-owned company consults the local community before building a dam.

2287 A car producer gives technical and managerial training to small- and medium-sized enterprises in its  
2288 supply chain.

2289 A large investment bank establishes a fund that invests only in organizations that fulfil criteria based  
2290 on the “triple bottom line”, that is economic, social and environmental factors.

2291

2292 **6.8.5 Development of the community and society issue 3: Contribution to social**  
2293 **development**

2294 **6.8.5.1 Description of the issue**

2295 Nowadays, an equitable social development is far from being reached. The gap between rich and  
2296 poor has significantly increased and social exclusion is an oppressing reality. Social problems are  
2297 major obstacles that affect negatively all actors in society and need to be faced in order to make the  
2298 right to development a reality for every one.

2299 Organizations can have positive and negative impacts on social development through all their  
2300 operations, including those in their value chain. An organization that aligns its activities with the  
2301 creation of a positive contribution to social development, within its sphere of influence, will create  
2302 better relations with its stakeholders, an enhanced reputation, and more efficient risk management.

2303 To contribute to social development, organizations should promote awareness among citizens of their  
2304 potential contribution to social development. Organizations should also address issues such as the  
2305 promotion of good health, the promotion of education and the reduction of poverty and hunger, which  
2306 are central to social development. Because culture can have such a positive impact on social  
2307 cohesion, the promotion of culture and the preservation of cultural heritage is also part of social  
2308 development.

2309 The United Nations Millennium Development Goals call for the active engagement of all actors in  
2310 society in order to achieve an equitable social development. Every organization should contribute to  
2311 social development through concrete actions in its own fields of activities.

2312 **6.8.5.2 Expectations and/ or related actions**

2313 An organization should endeavour to:

2314 — Contribute to raising of awareness by communicating to citizens the importance of their actions for  
2315 social development and the rights and duties of citizenship;

2316 — Encourage and assist citizens with their voluntary activities regarding social responsibility;

2317 — Support capacity building that will enable communities and citizens to participate in the formulation  
2318 and implementation of public policies and expenditures;

- 2319 — Promote good health by, for example, providing access to medicines and vaccination and by  
2320 encouraging healthy lifestyles, such as the practice of exercise, good eating habits and avoidance  
2321 of consumption of unhealthy substances;
- 2322 — Raise awareness about major diseases and their prevention, such as HIV/AIDS, cancer, heart  
2323 diseases, malaria and tuberculosis;
- 2324 — Support the access to essential health care services and to clean water and appropriate sanitation  
2325 as means to prevent illness;
- 2326 — Promote cultural activities to its stakeholders, respect and value the local culture and cultural  
2327 traditions. Actions to support cultural activities that strengthen the identity of minorities are  
2328 specially important as a means of combating discrimination;
- 2329 — Help conserve and protect cultural heritage, especially where its operations may have an impact  
2330 on it;
- 2331 — Promote and/or support education at all levels and engage in actions to improve the quality of  
2332 education, promote local knowledge and to eradicate illiteracy;
- 2333 — Encourage the enrolment of the children in formal education, and contribute to the elimination of  
2334 barriers to children obtaining an education, such as child labour;
- 2335 — Contribute to programs that provide access to food and other basic necessities for vulnerable  
2336 groups of low income, taking into account the importance of increasing their capabilities,  
2337 resources and opportunities. Special attention should be given to child nutrition;
- 2338 — Support social entrepreneurship ventures and the development of low cost social technologies  
2339 that are easily replicable and have a high social impact on poverty and hunger eradication.

**Box 12 Examples of actions**

A large company installs classrooms at its factories for its employees to complete primary and secondary schooling.

A governmental agency gives financial aid to poor families to help them keep their children at school as a means of promoting education and combating child labour.

## 7 Guidance for an organization on implementing social responsibility

### 7.1 General

This clause provides practical guidance on developing, integrating and implementing practices of social responsibility. It identifies actions that organizations of any type or size and location may take. The actions described here need not be applied in a step-by-step approach, but all main elements should be considered. Some organizations may find it more appropriate to undertake the elements in a different order or to repeat one or several of them.

Comprehensively addressing social responsibility is an ongoing activity that takes time. An organization implementing social responsibility will often address what its activities, goods and services are. Therefore it will look at the SR principles lined out in clause 5 and the SR core issues of clause 6 and evaluate its own policy, strategy and operations – also along its supply chain – accordingly. Then it will decide what it needs to do following the guidance given in this clause.

Social responsibility also involves considering an organization's impact on its stakeholders. An organization should identify, prioritize and accommodate the activities it undertakes to become more and more socially responsible according to its profile, context and feedback from stakeholders. The

2360 context in which an organization operates has an impact on its vision, policy and strategy, as well as  
 2361 its relationship with stakeholders and its daily practices. To make progress and allow for accountability,  
 2362 an organization should review its activities and progress and communicate about them.

2363 All these activities are interdependent. This standard is intended to be compatible with and should be  
 2364 integrated into an organization's existing models, strategies and practices.

## 2365 **7.2 Defining the scope of social responsibility for the organization**

### 2366 **7.2.1 Key considerations**

2367 As a preliminary step in implementing social responsibility, an organization should work with its  
 2368 stakeholders to define the scope of social responsibility for action. The scope includes the who  
 2369 (people and entities), what (social responsibility impacts and issues), where (locations) and, for  
 2370 specific applications, when (the time frames) to be covered. After collecting and evaluating its social  
 2371 responsibility profile information and understanding the social responsibility context in which it  
 2372 operates, the organization should identify the broadest "general scope" of social responsibility within  
 2373 which it might take action.

2374 Next, more specific and typically narrower scopes ("applied scopes") should be set defining the  
 2375 coverage for particular tools and purposes of the organization related to social responsibility. These  
 2376 tools and purposes may include, for example, the organization's vision statement (what it aspires to  
 2377 be), mission statement (it's role and purpose), strategies and objectives (Clause 7.4); targets (Clause  
 2378 7.5); and public reports (Clause 7.6), as well as other tools that help it integrate social responsibility  
 2379 into its activities, products and services. Applied scopes may start as narrow and be broadened over  
 2380 time and may vary from purpose to purpose. Small organizations may find it appropriate to maintain a  
 2381 narrower applied scope for many purposes to accommodate resource limitations.

2382 This process of examining the profile and context and setting the general and applied scopes for  
 2383 social responsibility should be repeated from time to time to account for changing circumstances and  
 2384 the availability of new information. In implementing this process, organizations may find it useful to join  
 2385 with their peers in developing model sets of issues, impacts and scopes that could be applied to their  
 2386 own type of operations.

### 2387 **7.2.2 Describing an organization's profile and social responsibility context**

2388 In order to describe its social responsibility profile, the organization should collect and evaluate  
 2389 specific information. The aim should be to focus on information that will likely prove useful in  
 2390 identifying the entities, issues and locations to be placed within the general scope and various applied  
 2391 scopes. Organizations just starting down the path to social responsibility may find that some of this  
 2392 information is not available. In this case, it should compile what is available and refine the profile later  
 2393 during subsequent scope-setting exercises. Profile information may include the following:

- 2394 — The vision, mission and purpose of the organization and its major operating units;
- 2395 — Key locations and geographic reach, organizational structure (e.g., non-profit corporation,  
 2396 partnership) and governance structure of operations (e.g., oversight board with chief operating  
 2397 office and audit committee); major customers and suppliers; major competitors; products and  
 2398 services; workforce make-up; annual revenue and expenses; and other quantitative information;
- 2399 — The stakeholders with whom the organization should engage as outlined in Clause 7.3;
- 2400 — The important social responsibility codes and instruments to which the organization voluntarily  
 2401 subscribes, and any general policies of the organization about social responsibility;
- 2402 — The social responsibility requirements for suppliers issued by the organization's key customers,  
 2403 and those imposed on the organization by parties that provide it funding;

2404 — Performance information concerning social responsibility produced from monitoring and  
2405 assessment processes (see Clause 7.7). This would include, for example, the degree to which an  
2406 organization's activities and practices meet internal and external requirements. For this purpose,  
2407 it may be helpful to review litigation records, audit results, regulatory enforcement records,  
2408 performance reports, comments from stakeholders or other documents and data. It may also be  
2409 useful to examine the organization's social responsibility objectives and targets, and its recent  
2410 performance toward achieving them;

2411 — Recent and anticipated major changes in strategies, policies, products, services, and major  
2412 activities;

2413 — Current and likely future major trends in the field of work or sector;

2414 — Major strengths, competencies, and weaknesses of the organization, including those related to  
2415 human and other resources; and

2416 — Recent noteworthy media coverage of the social responsibility performance and activities of the  
2417 organization, the major entities within its sphere of influence and its major competitors, and the  
2418 latest public social responsibility reports, if any, issued by them.

2419 To understand the social responsibility context in which it operates, the organization should identify  
2420 the major social, cultural and environmental trends underway that may be relevant to it and to those  
2421 entities within its sphere of influence. It should also consider the context presented in Clause 4, the  
2422 principles in Clause 5, and other important, relevant expectations of behaviour, legal standards and  
2423 instruments related to social responsibility.

### 2424 7.2.3 Defining the general and applied scopes

2425 After defining its profile, understanding the social responsibility context in which it operates and  
2426 considering the opinions of its stakeholders, the organization can use that information to identify its  
2427 general scope for social responsibility. This involves answering the following three questions to  
2428 identify the maximum range in coverage that the organization should consider:

2429 1) Who? Who are the entities and people that might be covered within the scope?

2430 This will include the organization and those entities within its sphere of influence. An entity  
2431 may be considered within the organization's sphere of influence if the entity's actions or  
2432 policies are controlled by the organization or subject to its reasonable influence. This may  
2433 include various entities in the value chain that are upstream of the organization (such as the  
2434 supply chain and contractors) and downstream (such as distribution and customers). It may  
2435 also include entities parallel to the organization (such as trade and sector associations), as  
2436 well as others within its stakeholder network (see Clause 7.3). Within the supply chain,  
2437 degrees of control may be related to the size, complexity and types of organizations in the  
2438 chain, as well as the organization's competitive situation — that is, the strength of the  
2439 organization compared to similar organizations - and the number of entities within the chain.

2440 2) What? What social responsibility issues and impacts might be covered?

2441 The organization should work with its stakeholders (see Clause 7.3) to identify the material  
2442 social responsibility issues associated directly with its own operations, activities, products  
2443 and services as well as those associated with the entities within its sphere of influence. In  
2444 developing this list of material issues, the organization should start by examining those  
2445 mentioned in Clause 6 but may also consider others. See help box.

2446 An issue is material if its actual or potential impact is significant or would substantially  
2447 influence the assessments and decisions of the organization or its stakeholders. Impacts  
2448 include those that affect the organization's own operations, activities, products or services, or  
2449 those of the entities within its sphere of influence. They also include the impacts generated  
2450 by the organization and such entities. Impacts may be determined using a range of

2451 methodologies, including those based on measurement, calculation, or reasonable  
2452 estimation or on the judgement of experts of the organization and its stakeholders.

2453 When evaluating issues to determine if they have actual or potential significant impacts, the  
2454 organization may find it useful to focus on the profile and context information and ask  
2455 whether the issues and impacts are being addressed by peer organizations, covered  
2456 extensively in the media, raised in government or other stakeholder complaints or otherwise  
2457 communicated to the organization, or important to the success of the organization.

2458 3) Where? What locations of operations and activities of the organization and other covered  
2459 entities might be addressed?

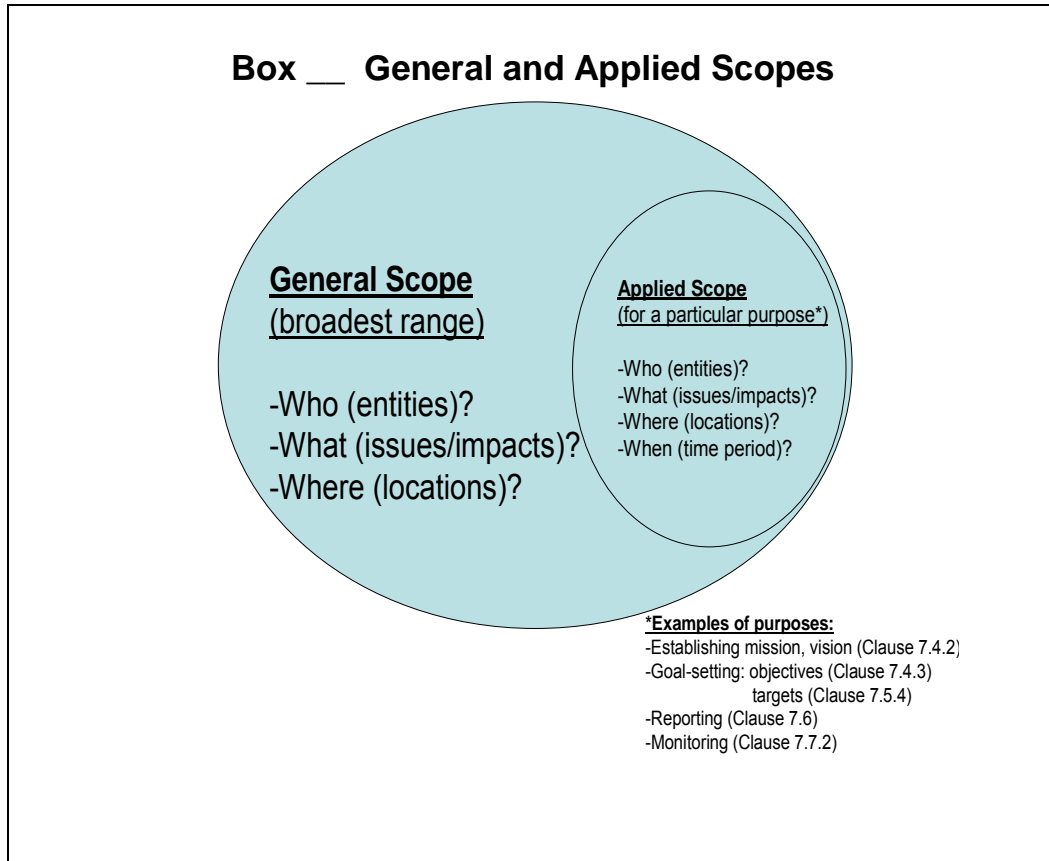

2460 Much of this information can be drawn from the profile.

2461 This process may start either with the identification of issues and impacts or with the identification of  
2462 entities and locations, with the one often leading to the other.

2463 Once the general scope is defined in terms of the who (entities and people), what (impacts and  
2464 issues) and where (locations), the organization can later consider how to narrow this scope to develop  
2465 “applied scopes” for particular purposes or tools related to social responsibility. The applied scopes  
2466 will identify the who, what, where and when---that is, those entities and people, impacts and issues,  
2467 and locations, as well as time periods to be covered.

2468 When setting the applied scope for a particular purpose or tool, the organization may find it useful to  
2469 consider the significance and extent of the social responsibility impacts and stakeholder views that are  
2470 relevant to the purpose; the resources available; importance to the organization’s success in  
2471 controlling various threats and realizing opportunities related to social responsibility; consistency with  
2472 the organization’s culture; public visibility or pressure to act; responsiveness to important social  
2473 responsibility trends; and ease of implementation. When deciding which material issues to include  
2474 within an applied scope, special consideration should be given to those issues of greatest potential  
2475 impact or stakeholder concern, even if the issue is present at entities with which the organization has  
2476 only limited influence.

2477

2479

2480 **7.3 Working with stakeholders**2481 **7.3.1 Key considerations**

2482 All organizations already undertake some form of stakeholder engagement by communicating with  
 2483 individuals or groups such as customers, employees, the government or communities. Stakeholder  
 2484 dialogue and engagement do not necessarily need an organization to develop a new communication  
 2485 system, but can entail building on existing experiences, approaches and results. Engagement may  
 2486 also be requested by stakeholders themselves and is not always initiated by the organization.

2487 Stakeholder engagement consists of three main components:

- 2488 — Identification of stakeholders;
- 2489 — Prioritization of stakeholders and their interests; and
- 2490 — The engagement process.

2491 An organization should engage with stakeholders on its overall actions related to social responsibility  
 2492 or on a specific issue or project accordingly to the prioritization it makes. The aims of the engagement  
 2493 should be clear from the outset to manage the expectations of those involved in the process.

2494 **7.3.2 The identification process**

2495 An organization should strive to identify all of the stakeholders, both internal and external, that have  
2496 interests in its activities and effects at the organizational and/or project/issue level. The organization's  
2497 existing relationships can be used as a starting point for the identification of stakeholders, but  
2498 consideration should also be given to stakeholders with whom an organization does not yet have  
2499 relationships. To identify stakeholders, the organization can ask itself a number of questions, for  
2500 example:

2501 — Who has interests that might be positively or negatively affected by us or our projects?

2502 — Who has been involved in similar matters in the same region in the past?

2503 — Who has said they would like to be involved?

2504 — Who has expertise that could be helpful in improving our approach to social responsibility?

2505 — Who would be dissatisfied or disadvantaged if they were excluded from the engagement?

2506 — Who would be particularly concerned by the sustainability, positively or negatively, of the  
2507 organization's activities, products and/or services?

2508 Once the identification process has taken place, the stakeholder list should be documented and  
2509 reviewed periodically as interests and relationships change and develop over time. See Help Box 7.3  
2510 for ideas of how different types of organizations can identify their range of stakeholders before  
2511 prioritising them.

2512 **7.3.3 Prioritisation**

2513 Having identified the stakeholders, an organization should prioritise the stakeholders and their  
2514 interests.

2515 There are different means by which an organization might do this, including:

2516 — The stakeholders' relationship and/or relevance to the seven core issues (see Clause 6);

2517 — A risk-management approach, identifying which activities most significantly impact the interests of  
2518 the organization or its stakeholders;

2519 — Consider interests derived from stakeholders who have a legal relationship with the organization  
2520 and those based on national laws or internationally recognized conventions, principles or  
2521 recommendations;

2522 — Match organizational resources to the cost and complexity of the engagement process – ranging  
2523 from simpler to more challenging ones.

2524 Through prioritization, it is likely that an organization will end up engaging more effectively with a  
2525 smaller number of stakeholders, making the process more manageable. The prioritization of  
2526 stakeholders and their interests helps to indicate relationships, and thus to integrate stakeholder  
2527 needs and issues into the organizational strategies and actions (see Clause 7.4, including its Help  
2528 Box.)

2529 **7.3.4 The engagement process**

2530 The stakeholder engagement process aims to develop trust between the organization and its  
2531 stakeholders, with the ultimate objective of improving the organization's social responsibility. Trust is  
2532 developed through a combination of performance and transparency, and involves two-way  
2533 communication regarding interests of social responsibility between the organization and its

2534 stakeholders. To secure their trust, organizations should engage with stakeholders in a manner  
 2535 appropriate to the situation and conditions. Provisions should be made for legitimate concerns to  
 2536 preserve confidentiality by, for example, restrictions on trade secrets, or individuals' medical records.

#### 2537 **7.3.4.1 Engagement plan**

2538 Before any engagement is undertaken, an organization should be prepared. The development of a  
 2539 stakeholder engagement and communication plan can be helpful in identifying specific means of  
 2540 communicating with stakeholders, including communication methods and frequencies. The plan  
 2541 should be communicated to stakeholders, be easily accessible as a document, and should evolve  
 2542 over time.

2543 Organizations should consider that stakeholders themselves may not be prepared for the engagement  
 2544 process. Organizations should assess stakeholder needs and provide them with some capacity  
 2545 building in order to enable them to fully participate in the engagement process.

2546 Stakeholders should be engaged at an early stage of a project or decision-making process to be  
 2547 confident that their interests are understood. An organization should be prepared for critical or  
 2548 negative stakeholder feedback, which may provide avenues for improvement.

#### 2549 **7.3.4.2 Engagement techniques**

2550 Paths for stakeholder engagement should be appropriate to their resources and communication styles.  
 2551 These range from group dialogue to telephone and e-mail. Regardless of the paths used, records of  
 2552 dialogue should be maintained for future reference.

2553 It may be advantageous to develop partnerships with stakeholders to proactively achieve particular  
 2554 goals. Partnership and collaboration are sources of creative thinking that can produce win-win  
 2555 solutions to existing conflicts, and may avoid potential conflicts, that may occur between an  
 2556 organization and its stakeholders.

2557 Meaningful stakeholder engagement is not an isolated activity. It is a decision-making method that  
 2558 involves a degree of cultural and procedural change within an organization. It has the potential to  
 2559 result in continuous learning within and outside an organization. This mutual learning process is likely  
 2560 to strengthen trust between an organization and its stakeholders. Trust, in turn, fortifies credibility.  
 2561 Ultimately, decisions are made by the organization, which should account for them (explain these  
 2562 decisions) to the stakeholders.

2563

2564 *Notes to IDTF: NOTES from Drafting team (Miles Watkins, Annette Kleinfeld, Carolyn Schmidt) – Our*  
2565 *only unresolved issue relates to the current WD Rev.3 Clause 4.2.1 (Context) – most of the stress is*  
2566 *on international norms, etc., and it concludes saying that “stakeholders do not replace broader society*  
2567 *in determining norms of behavior”. Thus, this “stakeholder context” section does not point toward*  
2568 *meaningful stakeholder engagement as an important SR tool in itself. We suggest that Clause 4*  
2569 *drafters consider the wording from WD 3, Clause 5.3 (principle of recognition of stakeholders and their*  
2570 *concerns). We want to keep the “stakeholder” sections clear, encouraging and conducive to two-way*  
2571 *dialogue.*

2572 *Please note that we have added a Help Box 7.3, modeled on the Help Box 7.2. There is also a related*  
 2573 *"Help Box 7.4". In our judgment, these will be useful tools to encourage any organization to prioritise*  
 2574 *and engage with its stakeholders in a planned, productive and useful way.*

## 2575 **7.4 Integrating social responsibility into the organization**

### 2576 **7.4.1 Key considerations**

2577 This section provides guidance on how to develop policy, strategies, and objectives for setting the  
 2578 specific SR agenda of the organization, how to decide what core issues of social responsibility (see  
 2579 Clause 6) are most significant for the organization, and which stakeholder groups have priority along  
 2580 the entire organizational value chain.

2581 When aiming for a credible and effective approach, social responsibility increasingly should become  
 2582 an integral part of the organizational structure, culture and identity. This means, the concept of SR  
 2583 should be integrated into the organization's mission, vision, overall goals, strategies, processes, and  
 2584 value orientation, and should focus on the core products, services and activities of the organization.

2585 The process of integration should be supported by the organization's leadership. Embedded in the  
 2586 organization's mission and/or vision and policies, and developed through interactive dialogue with  
 2587 stakeholders. The person or team responsible for implementing SR should be located at a level  
 2588 sufficiently high in the organization to resolve any challenges that could arise. The organization should  
 2589 also provide adequate resources for the implementation to ensure that the SR activities can be carried  
 2590 out effectively.

2591 The more an organization integrates its SR activities into its own cultural and structural context, the  
 2592 more it can improve its legal compliance, accountability, transparency, ethical conduct, while  
 2593 recognizing its stakeholders and their concerns (the "SR issues" described in the Organizational  
 2594 Governance category, Clause 6). In so doing, the more its implementation of SR will effectively  
 2595 contribute to improved operations, stakeholder relationships, sustainable development and the welfare  
 2596 of society.

2597 Guidance for SMOs: SMOs may have fewer stakeholder categories, and fewer "core issues" that they  
 2598 are directly involved in. SMOs may use the Help Boxes (Clause 7.3 and Clause 7.4) to identify those  
 2599 stakeholders and issues material (relevant, significant) to them, and to exclude those not relevant,  
 2600 before proceeding too far into the process.

### 2601 **7.4.2 Adopting principles of social responsibility and connecting them to the organization's** 2602 **statements**

2603 The organization's activities should be based on the principles of social responsibility as stated in  
 2604 Clause 5. (Legal compliance, respect for internationally recognized instruments, recognition of  
 2605 stakeholders and their concerns, accountability, transparency, respect for fundamental human rights  
 2606 and respect for diversity.) These principles should be specified and clearly defined. Then, it is  
 2607 essential to connect these principles to the organizational values and rules of conduct.

2608 A written mission and/or vision statement can be helpful to define an organization's overall values and  
 2609 goals. Usually, these instruments are used by organizations to state its commitment to take on social  
 2610 responsibility and to align the organization with the principles of SR mentioned in Clause 5. "Mission  
 2611 statement" refers to the organization's primary and daily activities. It helps to guide strategic planning  
 2612 and to allocate resources. A "vision statement" is long-term oriented, describes the future profile of the  
 2613 organization and strives to inspire by invoking important values.

2614 The organization may find it useful to use a written code of conduct or ethics code approved by its  
 2615 leadership. Such a code specifies the social responsibility commitment by translating the principles  
 2616 and values into behaviours.

2617 A code of conduct, or ethics code, provides general guidance to employees, members, constituents,  
 2618 neighbours, students, local governments, suppliers, consumers, owners/shareholders and other

2619 stakeholders on how an organization should behave ethically and in accordance with its values,  
2620 principles and mission. It can assist staff and members in daily decision-making. Also, the  
2621 organization increases its accountability to and transparency toward stakeholders when its code of  
2622 conduct or ethics code is made publicly available. Any organization can create its own code, or it can  
2623 choose to follow existing ethics codes, charts of values, or professional association codes which are  
2624 relevant for its context.

2625 In all of the above activities, the organization may find it useful first to consult internal stakeholders  
2626 when developing these statements, and then to involve external stakeholders for review and feedback.

#### 2627 **7.4.3 Developing objectives and strategies for SR**

2628 The organization should first examine its existing policies (if any) for dealing with the seven SR “core  
2629 issues” explained in Clause 6: organizational governance, human rights, labour relations, the  
2630 environment, fair operating practices, consumer issues, and contribution to the community and society.

2631 The organization should choose a clear approach, centralized or decentralized, bottom up or top down,  
2632 or a combination, for the implementation process. As a starting point both the specific features of the  
2633 organizational culture as well as local customs should be identified and taken into consideration.

2634 By identifying and prioritising the stakeholders (see Clause 7.3, including Help Box 7.3) the  
2635 organization has already identified issues to be considered in the strategy formulation and objective  
2636 setting process. Organizations can use the stakeholder-issue-matrix (Help Box 7.4, attached) to  
2637 systematically approach the seven core issues mentioned in clause 6 with reference to their  
2638 stakeholders.

2639 With this information, the organization can connect its significant SR issues to organization-wide  
2640 policies, define its objectives for improvement of its SR performance, and develop strategies and  
2641 processes to implement those objectives.

2642 To develop an effective strategy, the organization should link its SR objectives to clearly understood  
2643 goals. When selecting goals, the organization should be realistic (not overly ambitious), especially at  
2644 the start Clause 7.2.3 provides guidance on analysing the scope, boundaries and context of the  
2645 organization, in order to identify its “applied scope” – within which it should take responsibility.

2646 An organization’s strategies for handling issues of social responsibility may include information on  
2647 how to:

2648 — Determine the procedures for addressing selected issues;

2649 — Engage with stakeholders, including dealing with situations where stakeholders’ interests are in  
2650 conflict with each other or with the organization (see Clause 7.3);

2651 — Develop its overall framework to manage the implementation of social responsibility including  
2652 performance, progress and reporting. (see Clause 7.5 and 7.7);

2653 — Fairly share the implementation costs of social responsibility throughout the supply chain through  
2654 adequate purchasing practices (e.g. prices, delivery times, long-term supplier relationships);

2655 — Handle issues in different countries, locations and/or specific local situations, taking into account  
2656 differences in culture as well as in social and economic conditions.

2657 In all of the above activities, the organization may find it useful to consult internal stakeholders when  
2658 developing these statements, and then involve external stakeholders for review and feedback.

2659 The organization should allocate sufficient resources (staff, time, money, leadership support, etc.) to  
2660 ensure that the planned SR goals can actually be accomplished. All stakeholders (employees,  
2661 members, constituents, neighbours, students, local governments, suppliers, consumers, partners,  
2662 stockholders, etc.) should be included in and/or informed of the SR efforts. The organization should

2663 develop practices to communicate its objectives and goals in orienting its activities to SR, and to  
2664 incorporate stakeholders' feedback.

2665 NOTE "Objectives" refers to mid-or long-range goals; "targets" refers to short term goals. (See Clause 7.5.4)

2666

2667

2668 *Note to IDTF:Help Box: Stakeholder-Issue-Matrix (Note: not all boxes are filled out – but enough to give a representative idea of how to use this.)*

	Core Issues						
Stakeholders	Organizational Governance  Legal compliance Accountability Transparency Ethical conduct Recognition of stakeholders and their concerns	Human rights  Civil and political rights Social, economic and cultural rights Vulnerable groups Fundamental right at work	Labour practices  Employment and employment relationships Conditions of work and social protection Social dialogue Health and safety at work Human development	Environment  Environmental aspects of activities, products and services Promoting sustainable consumption and production Sustainable resource use Climate change Ecosystems	Fair operating practices  Anti-corruption and anti-bribery Responsible political involvement Fair competition Promoting SR through the supply chain	Consumer issues  Fair operating, marketing and information practices Protecting consumers' health Mechanism for product recall Provisions and development for socially and environmentally beneficial goods and services ....	Contribution to Community and Society  Contribution to social development Contribution to economic development Community involvement
Employees	Train employees for fair and ethical business conduct		Compliance with international recognized labour standards at all locations			Awareness building and behavioural trainings in case of product recalls	Identify situations (health issues, safety practices, community problems such as alcohol and drug abuse) where organization can engage workers to improve community situation and their own productivity
Clients Customers Consumers		Provide information on treatment of workers / suppliers; notify clients etc. of good conditions and improvements		Provide information on environmental impact / biodegradability etc. of products			
Shareholders /	Provide owners with clear economic			Openly discuss the need to address	Explain and enforce anti-corruption		

Owners / Investors (if organization is a for-profit business)	reports, including setbacks			issues such as climate change	policies		
Members (if organization is a not-for-profit entity, such as a Labour Union, NGO, Foundation, etc.)		Examine inclusion policies as they apply to vulnerable groups (people with physical disabilities, racial or religious minorities, etc.)			Providing clear guidelines to ensure that organization does not go beyond its mandate and become politically involved against the wishes of its members		
Local / regional community residents	Establish communication links with residents			How to notify residents of environmental impacts of organization's activities, especially in case of accidents			
Suppliers / Contractors (partners in value chain)		Involve partners in efforts to identify problems and improve conditions				Inform consumers of actions taken by the organization, which improve conditions for suppliers (take credit for SR actions!)	

## 7.5 The implementation of social responsibility in daily practice

*Note to IDTF: 7.5.0 or Helpbox for SMO guidance: "How to get started!" Is this kind of guidance helpful for SMO's (in the beginning of a section as it was proposed in Vienna?)*

### Establishing structure

Invite some employees who are interested in social responsibility to join a small multi functional team (including members for example of the communication, the HR, the marketing, the controlling department) that will support and coordinate the integration.

Think of a simple reward or recognition that will work within your existing rewarding system.

Arrange for management to be available in case of difficulties in implementing social responsibility.

### Raising awareness

Before starting, inform all employees of the own organization about the ideas (or vision) and objectives of the management with regard to integrating social responsibility.

Explain that integrating social responsibility is a chance to improve services, products or activities and stakeholder relationships.

### Building competencies

Explain that it is a learning process for everyone and for the organization itself.

Organize one or more information sessions or workshops to discuss ideas within the own organization.

Invite stakeholders or local experts for relevant issues who are cooperative and willing to participate.

### Setting targets

Start with one or two core issues that have been selected as material using the guidance provided in 7.2 and 7.4.

Choosing the issues may be guided by:

- Issues that affect stakeholders where the relationships are very close (for example, your own employees);

- Issues expected to require a short implementation time or limited resources to address;

- Issues for which some expertise already exists within the organization.

The criteria above can help to explain to the own organization and to external stakeholders why other material core issues are being addressed later in time.

Translate the objectives for the selected issues into short-term targets that are clear, measurable, achievable, time bound and realistic!

### Implementing

Define actions for addressing each issue and objective and monitor the progress.

Consider reviewing the successful actions of similar organizations in similar situations (examples of best practice) when defining the actions for addressing each issue.

2705 Try to measure the results as much as possible, because it will motivate people and will help the  
2706 organization with evaluation in the learning process.

#### 2707 **7.5.1 Key considerations**

2708 Organizations should consider the following when implementing social responsibility:

2709 People are a key success factor!

2710 Therefore, an organization should raise awareness and build its own competencies and capabilities.  
2711 People at all levels of an organization should be involved in implementing a strategy, policy, goals,  
2712 and objectives as well as a code of conduct.

2713 The same is true for other stakeholders: Determining short-term targets and defining action plans and  
2714 indicators should be done, as far as possible, through engagement with stakeholders (see Clause 7.3).

2715 Be creative with existing structures, systems and capacities!

2716 When integrating social responsibility into an organization, make use of existing systems, methods  
2717 and capacities as much as possible. For example, make use of management, quality and information  
2718 systems, especially of their tools and structures such as decision-making and determining rewards.  
2719 Organizations should not duplicate existing structures, but may need to modify them, such as in  
2720 working with multiple stakeholders.

2721 Find the right balance while striving for necessary and realistic changes!

2722 Feasibility and a realistic perspective are more important when integrating social responsibility into an  
2723 organization than striving for results that are too ambitious to be achieved. Setting a realistic agenda  
2724 and integrating it into the organization's daily practices involve a learning process for the organization  
2725 and all its stakeholders. The most important factor is that an organization gets started seriously (i.e. by  
2726 focusing on core products, services and activities), stays on this path and tries to improve its practices  
2727 continuously!

#### 2728 **7.5.2 Establishing structure and reviewing operations against strategy**

2729 To effectively integrate social responsibility into daily practice, an organization should review existing  
2730 structures at the operational level against strategy (see Clause 7.4) and modify these structures,  
2731 where necessary, with regard to their relevance, support and applicability.

2732 To begin, the organization should determine whether it already has appropriate procedures to engage  
2733 with internal and external stakeholders and to address their feedback (see Clause 7.3.). In addition, it  
2734 should determine how existing procedures can be modified to better engage with stakeholders.

#### 2735 **Example box:**

2736 If an organization regularly holds interviews with its employees or conducts an employee survey, it  
2737 should review the form or survey and the content of these interviews against its social responsibility  
2738 strategy. It could also determine if the form used for internal stakeholder dialogue could be used for  
2739 external stakeholder dialogue as well.

2740 A next step is to choose an appropriate approach for the implementation process in general: As a  
2741 starting point, both the specific features of the organizational culture as well as local customs should  
2742 be identified and taken into consideration. Against this background, it should be considered whether  
2743 the process design should be rather centralized or decentralized, bottom up or top down, or a  
2744 combination of these.

2745 *Note to IDTF: We think this paragraph needs some further, more precise guidance]*

2746 Further areas that should be looked at in order to support the implementation of strategy are:

2747 — Developing an effective communication strategy within the organization;

2748 — Determining rewards and recognition for successful implementation or for innovative and valuable  
2749 ideas and integrating rewards into existing human resources systems;

2750 — Identifying people at all levels within the organization and determining their authorities and  
2751 responsibilities to integrate social responsibility into existing decision-making procedures;

2752 — *Note to IDTF: Some more guidance to be defined?*

### 2753 **7.5.3 Raising awareness and building competencies**

2754 An organization should explain at all levels the principles of social responsibility, the specific issues of  
2755 social responsibility that have been identified as significant for the organization and their  
2756 consequences, for the mission, the vision, the code of conduct and the policies of the organization.

2757 A success factor is that the top management of the organization is itself committed to these principles,  
2758 values and issues and, therefore, is willing to promote, motivate and stimulate social responsibility in  
2759 an open, transparent and convincing way to the internal stakeholders.

2760 The following actions can help the organization to further raise awareness about social responsibility:

2761 — Encouraging participation, for example in teams, and stimulating the involvement of employees  
2762 from all levels;

2763 — Communicating regularly about the organizational efforts;

2764 — Organizing information sessions with the use of internal or external experts or stakeholders;

2765 — Informing designers, whose work typically occurs at the start of service or product life cycles,  
2766 about the possibilities or consequences of addressing or not addressing core issues of social  
2767 responsibility.

2768 Integrating social responsibility in daily practice requires building internal competencies. A simple way  
2769 is identifying people within and around the organization who already have knowledge of and  
2770 experience with the core issues, for example, specialists in environmental or human resources issues,  
2771 members of an in-house consultancy, quality employees, suppliers, and communication experts.

2772 The organization may identify people who are willing or who are especially well suited to actively  
2773 support implementation. Organizing training sessions with the use of internal or external experts or  
2774 stakeholders can help to improve the own competencies.

2775 Other options in building competencies can be achieved through various actions, including:

2776 — Studying best or worst practices of your own and your organization's industry or sector;

2777 — Creating multi-level and/or multi-functional teams to exchange knowledge and ideas;

2778 — Organizing workshops to enable people to identify quick wins and successes in their own work;

2779 — Stimulating innovative and valuable ideas for the activities, goods or services of the organization  
2780 and providing research or development specialists or designers with opportunities to do pilot  
2781 projects;

2782 — Sharing and discussing with employees and stakeholders the organization's social responsibility  
2783 achievements, for example in workshops.

#### 2784 7.5.4 Setting social responsibility targets

2785 The establishment of concrete and practical short-term targets at the operational level requires a  
2786 translation of the long - and mid-term objectives defined in Clause 7.4.

2787 This should be done for an organization's activities, products and services, including their life cycles,  
2788 as well as for the different departments and functions, down to the individual employee.

2789 In setting the targets it is crucial that they are clear, specific, measurable, time bound and realistic! In  
2790 doing so an organization enlarges the acceptance of changes caused by implementing SR and  
2791 enhances the credibility both internally and externally.

2792 An organization should develop these targets in consultation with its stakeholders, especially with its  
2793 own employees and internal experts as far as possible, and take into consideration that engagement  
2794 is a learning process. It should prioritize the defined targets and the concrete activities while  
2795 considering:

2796 — Own potentials, strengths and (economic) power;

2797 — Degree of organizational and management maturity;

2798 — Regional, national, local and cultural differences of its subsidiaries;

2799 — Differences in economic development of the places where it is active.

2800 Setting concrete targets in social responsibility can be further supported by the following actions:

2801 — Defining opportunities, new ideas, quick wins and innovative activities by stimulating people  
2802 (because integrating social responsibility sometimes needs new ways of thinking and working);

2803 — Creating possibilities to do pilot projects and invite interested stakeholders to participate;

2804 — Defining risks, threats, negative impacts and difficult changes and ways to minimize those risks at  
2805 operational level by doing risk analysis and where necessary setting up crisis management  
2806 procedures;

2807 — Defining timelines and budget.

2808 One approach is to check and regularly monitor the efforts and achievements working with indicators  
2809 of social responsibility (see 7.5.6).

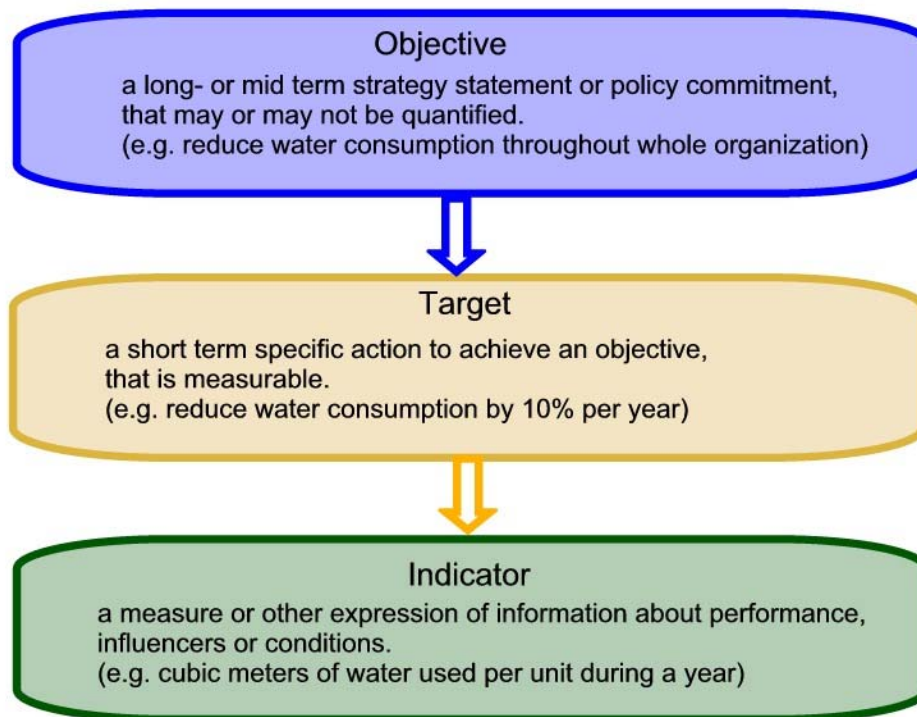

2810 Monitoring the efforts and fulfillment of SR targets could also be done, for example, by asking a  
2811 representative (focus) group of the respective stakeholders, whether or not they consider the  
2812 communicated targets to have been fulfilled, and if not, why not.

#### 2813 Example box:

2814 If one of the targets has been to improve the tidiness and the climate (temperature, humidity, etc.) of  
2815 the working place, the respective group of stakeholders, here the employees of the organization will  
2816 be easily able to confirm or deny its fulfillment by the organization.

#### 2817 7.5.5 Working with Indicators of social responsibility

2818 Indicators will help an organization in measuring and monitoring the targets and activities for social  
2819 responsibility:

2820

2821 Although this is an approach more often used by larger organizations, not all kinds of targets need a  
2822 sophisticated system of indicators and not all indicators need heavy statistics, so smaller  
2823 organizations can work with a smaller set of indicators too.

#### 2824 7.5.5.1 Types of indicators

2825 There are several types of indicators:

- 2826 — Metric indicators express a quantitative measure or rating (i.e. numbers or a percentage);
- 2827 — Initiative indicators are an expression of the status about a specific project or task;
- 2828 — Descriptive indicators express a qualitative description of conditions;
- 2829 — Leading indicators measure attitudes, behaviors, efforts or conditions that may eventually affect  
2830 the outcome; and
- 2831 — Lagging indicators measure the outcome of the organization's activities.

2832 A key performance indicator is a measure of performance critical to the success of an organization.

2833 Key performance indicators are not restricted to those items that can be applied across the entire  
2834 organization; they can also be developed for sub-units, specific projects, processes or activities.

2835 Organizations may find it useful to establish a set of indicators that are complementary. Such  
2836 indicators may be established to address various levels of the organization, such as headquarters,  
2837 country or regional level, facility level or various stages of a process, or various organizations in a  
2838 supply chain, or cause-and-effect.

2839 For any particular social responsibility objective, a mix of indicator types can be most effective in  
2840 driving the desired action.

#### 2841 **7.5.5.2 Considerations for selecting or defining indicators**

2842 The indicator should be:

2843 — Appropriate for the purpose of the measurement and consistent with the kind of information  
2844 stakeholders would want to see;

2845 — Appropriate for the scope and location of operations the organization covers;

2846 — Easy for intended audiences to understand;

2847 — Suitable for benchmarking; and

2848 — Able to measure data or other information that can be provided reliably and within the time  
2849 required.

2850 Ideas for indicators can also be obtained from existing instruments like the GRI Sustainability  
2851 Reporting Guidelines (*Note to IDTF: Regarding reference to GRI final check is needed with the results*  
2852 *of the ad hoc group working on this key issue*) as well as from peer social responsibility reports and  
2853 other sources.

2854 NOTE An organization does not need to select or define indicators that call for information that is private,  
2855 proprietary or otherwise legally protected from disclosure, or that is impractical to obtain or disclosure.

2856 In addition, indicators should not impose an excessive burden in measuring and reporting results.

#### 2857 **7.5.5.3 Indicator development principles**

2858 An organization should take into account principles for indicator development, such as stakeholder  
2859 inclusiveness, comparability, materiality, accuracy, reliability, accessibility (how easy is it to get the  
2860 information?), timeliness and clarity, which are described in more detail in the GRI Sustainability  
2861 Reporting Guidelines (*Note to IDTF: Regarding reference to GRI final check will be needed*)

2862 **Example box:** (*Note to IDTF: With some indicator examples, like below*)

2863 — % of employees being represented by a legal trade union at the beginning of a working season;

2864 — average number of hours spent on education by employees per unit per year.

#### 2865 **7.5.6 Action plans and instruments**

2866 Action plans can help with implementing social responsibility in a structured way taking into account  
2867 the organization's capacities and verifying at the same time the appropriateness of the targets set  
2868 before. Developing action plans could include:

2869 — Defining implementation milestones that include or link to actions that are part of the stakeholder  
2870 engagement plan (see Clause 7.3) and communication plan (see Clause 7.6);

2871 — Allocating resources, for example budget, human resources, specific expertise, technology and  
2872 information systems; and

2873 — Describing methods for executing the plan, for example, project management.

2874 An organization should first consider existing instruments, frameworks and tools and explore how  
2875 specific actions and measures of social responsibility could be integrated.

2876

2877 **Practical help box: “Using tools and frameworks”**

2878 *Note to IDTF: What are the greater needs for this help box:*

2879 *1) Do we rather need guidance on integrating SR into existing frameworks and tool including simple*  
2880 *tools SMOs will be more likely to use*

2881 *and / or:*

2882 *2) Do we need guidance on ideas for / on creating new tools such as*

2883 *- the “Issue Matrix” from Sweden: Match the SR (core) issues towards 3 perspectives: value chain,*  
2884 *processes and stakeholders. In matching use a degree of impact from high, medium till low. Use 3*  
2885 *phases: analysis, implementation and evaluation*

2886 *or*

2887 *- the Issue Matrix from Kim Christiansen (mentioned in Vienna), where the SR (core) issues are*  
2888 *matched with the stakeholders (see usage in 7.4)*

2889 *We think that innovative tools and ideas of the WG SR experts should be included in the Guidance*  
2890 *Document itself (as was done already with the Issue Matrix in 7.4)! In this way ISO 26000 will clearly*  
2891 *add value to the existing practices an).*

2892

2893 **Help Box xx: Integrating SR into existing frameworks and tools**

2894 *This help box could provide guidance on how to use in the SR context:*

2895 *— the “classic” EFQM model or the modified EFQM model “Sustainable Excellence”,*

2896 *— a classic (ISO compatible) PDCA management system, or*

2897 *— a tool for strategic evaluation like the (Sustainable) Balanced Scorecard*

2898 *— interviews, contracts with employees, clients, suppliers, etc.*

2899 *Note to IDTF: here we would have a chance to explain that ISO 26000 is not an MSS itself, but will*  
2900 *make use of existing MSS’s. Some drafters felt that it would be enough to use the PDCA circle as an*  
2901 *example here and only refer to the existing modifications of the other tools, maybe in the Annex.*

2902 **7.6 Communicating on Social Responsibility**

2903 **7.6.1 Key considerations**

2904 Effectively communicating with internal and external stakeholders about social responsibility serves  
2905 many purposes. Such communication:

2906 — Raises awareness within an organization about its strategies, plans, performance and challenges  
2907 for social responsibility, engaging and motivating employees to support the organization’s  
2908 activities in social responsibility;

2909 — Enhances an organization’s reputation for responsible action, openness, integrity and  
2910 accountability, to strengthen stakeholder trust and confidence in the organization;

- 2911 — Better aligns plans, actions and roles concerning social responsibility with the interests of the  
2912 organization's stakeholders;
- 2913 — Helps meet the reasonable requests of stakeholders for information that can be used to assess  
2914 the organization's performance on social responsibility;
- 2915 — Facilitates benchmarking among peer organizations, which can stimulate improvements in  
2916 performance on social responsibility;
- 2917 — Provides information that can be used to begin stakeholder engagement and respond to  
2918 stakeholder concerns;
- 2919 — Addresses legal and other requirements concerning the disclosure of social responsibility  
2920 information;
- 2921 — Shows the extent of conformity with commitments to social responsibility to which the organization  
2922 subscribes; and
- 2923 — Provides a framework for ensuring prompt and adequate responses to emergencies related to  
2924 issues of social responsibility.

#### 2925 **7.6.2 Planning and selecting forms of communication and media**

2926 A communications plan can enhance the cost-effectiveness of communication about social  
2927 responsibility. The plan can identify, for example, the purpose/ desired outcome, audience, content,  
2928 extent, timing/sequence, methods and forms of communication; the parties who will do the  
2929 communicating; and the internal and external personnel and other resources needed.

2930 The following factors should be considered in developing the plan:

- 2931 — The budget and other resource limits, including whether an internal or external professional will be  
2932 used to help develop and/or implement the plan;
- 2933 — The potential value of using multiple forms of communication to deliver key messages to reach the  
2934 most stakeholders;
- 2935 — Alignment of the communications plan with the organization's existing strategic and operational  
2936 plans;
- 2937 — The cultural, social, educational, economic and political background of those stakeholders who  
2938 make up the primary audience for the communication, as well as their values, views and  
2939 concerns;
- 2940 — The expected level of participation by the intended audience, that is, whether they will provide  
2941 feedback, help decide solutions or convey the information to others;
- 2942 — Ease of access to the information by the intended audience; and
- 2943 — Type and level of assurance to which the information may be subject.

#### 2944 **7.6.3 Types of communication on social responsibility**

2945 When developing effective communications to internal and external stakeholders, the organization  
2946 should consider various types of communication, including periodic public reporting and other ways to  
2947 communicate with stakeholders.

2948

2949 To be effective, communication about social responsibility must be accessible to and credible with its  
2950 stakeholders. Such communication should, as appropriate:

- 2951 — Be informed by dialogue among the organization and its stakeholders;
- 2952 — Use a variety of communication tools and techniques to ensure reasonable access to the intended  
2953 audience and others who may need the information;
- 2954 — Be both regular and ad hoc on specific issues;
- 2955 — Identify and address short-term targets and long-term objectives;
- 2956 — Discuss both achievements and problems;
- 2957 — Be transparent, honest, ethical and accurate as well as responsive to the reasonable requests and  
2958 needs of stakeholders without divulging protected information;
- 2959 — Be consistent and comparable over time and be comparable with applicable, reasonably available  
2960 performance benchmarks;
- 2961 — Be feasible and practical for the organization;
- 2962 — Be timely, clear, succinct and complete for the purpose intended.

#### 2963 **7.6.3.1 Periodic public reporting**

2964 An organization should regularly and publicly communicate performance and other information about  
2965 its operations, products, services and activities related to social responsibility. It should address those  
2966 social responsibility issues (see Clause 6) that are material (see Clause 7.2) to the organization and  
2967 its stakeholders. [If any of the seven core issues from Clause 6 are not addressed in at least some  
2968 way, the organization should explain why in order to enhance credibility.] The communication should  
2969 contain a mix of quantitative data and qualitative explanatory and contextual information that provides  
2970 a fair and complete picture of social responsibility performance, including achievements and shortfalls  
2971 and how those shortfalls will be addressed. This information may include, for example, plans,  
2972 objectives, targets, performance, compliance, issues, commitments, approaches and stakeholder  
2973 engagement activities. See, for example, the GRI Sustainability Reporting Guidelines, which suggest  
2974 specific information that might be included in simple social responsibility reports as well as more  
2975 sophisticated ones. These Guidelines provide model indicators as well as reporting principles for  
2976 enhancing the comparability, credibility and usefulness of the reported Information.

2977 [Clause 7.X provides guidance on assurance processes that may be used to enhance the credibility of  
2978 social responsibility reports.]

#### 2979 **7.6.3.2 Other communication about social responsibility**

2980 A wide range of other internal and external disclosures relating to social responsibility may be used to  
2981 address the needs of an organization and its stakeholders. This communication may be made on a  
2982 regular or ad hoc basis, as appropriate. Examples include:

- 2983 — Communication within the organization to raise general awareness about social responsibility and  
2984 related activities and inform further dialogue about them;
- 2985 — Communication with stakeholders concerning claims about the social responsibility of activities,  
2986 products and services. [See Clause 7.8 concerning assurance processes that may be used to  
2987 enhance the credibility of these claims.];
- 2988 — Communication to suppliers about procurement requirements related to social responsibility;

- 2989 — Communication in crisis situations that may have implications for social responsibility; and
- 2990 — Communication with stakeholders on specific issues or projects related to social responsibility  
2991 (see Clauses 7.3 and 7.6.5).
- 2992 There are many tools, methods and media that may be used for sharing information. These include,  
2993 for example, reports, newsletters, magazines, posters, advertising, letters, voicemail, live performance,  
2994 video, websites, podcasts (website audio broadcasts), blogs (website discussion forums), product  
2995 inserts and labels, and advertising. It is also possible to communicate through the media using press  
2996 releases, interviews, editorials and articles.

2997 **Box 24 Suggestions for improving the cost-effectiveness of communication**

2998 Here are some suggestions for improving the cost-effectiveness of communication that may be of  
2999 particular use for small and medium-sized organizations:

- 3000 — Incorporate information into existing communication channels, for example an internal newsletter,  
3001 quarterly external mailing, or available electronic means;
- 3002 — Set priorities for the information content and eliminate or postpone communication on lower  
3003 priority items;
- 3004 — Focus on the content of the communication, and minimize glossy photos, sophisticated graphics,  
3005 and other features that can add effort and cost;
- 3006 — Choose an appropriate frequency of reporting; for example, issue reports every two years rather  
3007 than annually, but provide more frequent updates of specific initiatives on the Internet;
- 3008 — Where external assurance is desired to boost credibility, use a voluntary advisory group or other  
3009 volunteers to conduct external assurance of an organization's report, limit assurance activities to  
3010 the most important data, and/or invite existing auditors to undertake report assurance while they  
3011 are already in the organization on other matters;
- 3012 — Use performance and other data that has been reviewed and is readily available, such as  
3013 environmental and health and safety reports; diversity information reported to the government;  
3014 charitable donations from tax reports; energy consumption from energy and fuel bills, and  
3015 associated greenhouse gas emissions which can be calculated from this data; water consumption  
3016 from water bills; and key priorities from an organization's strategic plan;
- 3017 — Use guidance on social responsibility communications specifically designed for SMOs, such as  
3018 the guidance on periodic social responsibility reporting for small organizations provided by the  
3019 Global Reporting Initiative and the Global Compact;
- 3020 — Narrow the geographical distribution of the information and expand it over time; and
- 3021 — Use employees to plan for and prepare the communication or seek the help of an outside  
3022 communication professional who is willing to provide social responsibility communication services  
3023 for free. Contact a professional communication association to help.

3024 **7.6.4 Stakeholder dialogue on communication about social responsibility**

3025 In addition to engaging stakeholders on social responsibility issues as provided in Clause 7.2 and 7.3,  
3026 an organization should also periodically discuss its communications about social responsibility with its  
3027 stakeholders. These discussions can help the organization:

- 3028 — Assess the adequacy and effectiveness of the content, media, frequency and scope of  
3029 communication so that it can be improved as needed;

- 3030 — Set priorities for the content of future communication;
- 3031 — Secure external assurance of reported information from stakeholders, if this approach to  
3032 assurance is used; and
- 3033 — Identify best communication practices.

## 3034 **7.7 Examining activities and practices of social responsibility**

3035 *Note to IDTF: This subclause has been revised after reading of 7.x, which is expected to be 7.8.*  
3036 *Comments on WD3 has been included and all about credibility and assurance has been removed.*

### 3037 **7.7.1 Key considerations**

3038 The effectiveness of an organization's activities and practices can be enhanced by regular evaluation  
3039 and examination. The focus should be on keeping track of performance of practices and the results of  
3040 the activities. The results of the examination and the regular monitoring of activities and  
3041 measurements of performance should be communicated internally and externally to provide for  
3042 organizational learning, drive performance improvement and enhance the dissemination of  
3043 experiences and competencies.

3044 Disclosing examination results will also be a learning process for stakeholders and is likely to  
3045 strengthen trust between an organization and its stakeholders. Engaging stakeholders in examination  
3046 is an ongoing process with dialogue and feedback that adds to an organization's awareness of its  
3047 risks and opportunities. Stakeholder feedback is valuable for an examination of the organization's  
3048 overall objectives and specific targets for social responsibility.

### 3049 **7.7.2 Keeping track of performance**

3050 Keeping track of performance and examine its activities is a process that helps to collect information  
3051 about what is happening on the practices implemented and the actions planned after a certain period  
3052 of time and at regular intervals.

3053 At appropriate intervals, an organization should examine its actions and performance on social  
3054 responsibility in relation to the specific targets but also in relation to how the single action adds to the  
3055 overall objectives and strategy of the organization. The organization should keep records of the  
3056 examinations. The organization should communicate this information by appropriate means to the  
3057 relevant stakeholders. The organization should verify that the information to be disclosed to others is  
3058 accurate, complete and reliable.

3059 The examination should look into:

- 3060 — What worked and why? – what did not work and why?
- 3061 — What could have been done differently?
- 3062 — Ideas for adjustments and changes.

3063 In gathering information and data for the examination the organization may face some challenges.  
3064 Some issues and actions may be costly to examine, others are difficult to examine quantitatively and  
3065 objectively and others might lack available data. An organization should evaluate the costs and efforts  
3066 compared to the benefits of gathering specific data.

3067 Examination of performance should include examination of activities that are as objectively verifiable  
3068 as possible. Some objective measures may be difficult to obtain. In such cases advice from  
3069 stakeholders can be used as a starting point to identify appropriate indicators for an initial examination  
3070 before setting up more comprehensive examination activities.

3071 The monitoring process and examination should include performance against an organization's  
 3072 commitments to social responsibility and the significant and controversial issues by using generally  
 3073 accepted indicators of social responsibility for the type and nature of the organization.

3074 An organization should gather information and keep records of its activities and performance on social  
 3075 responsibility and present it in a form that could be reviewed by top management. The information  
 3076 should include achievements on all issues of social responsibility, including those explained not  
 3077 relevant for the time being.

### 3078 **7.7.3 Improvement options**

3079 The result of a systematic examination of the achievements of SR practices and actions should  
 3080 include an identification activities that should be improved. The ideal examination identifies areas and  
 3081 success and areas where the organization will learn that it needs to improve its performance.

3082 The results of the examination should also be used while management is addressing challenges and  
 3083 reviewing the organization's statements, objectives, allocated resources, targets and actions plans, as  
 3084 necessary. Large organization can benefit from including SR expertise in the internal management  
 3085 review team.

3086 If lack of compliance with the organization's statements, strategies, objectives and targets is identified,  
 3087 this should be used for continuous learning and improvements. Appropriate measures should be  
 3088 established and taken to overcome the challenges.

3089 Results of examinations should be communicated to the organization's stakeholders to provide  
 3090 adequate and constructive feedback. An organization should respond to any stakeholder reactions  
 3091 within a reasonable time frame and should make publicly available both the stakeholder feedback and  
 3092 the response.

#### 3093 **Box xx Documents to be examined**

3094 Depending on the nature and size of an organization, various types of documentation may be included  
 3095 in an examination of SR performance:

- 3096 — Data records of key performance indicators (see Clause 7.5.4) measured at regular intervals, for  
 3097 example compliance with relevant laws and organizational commitments;
- 3098 — Results of environmental, health and safety audits;
- 3099 — Results of supply chain audits;
- 3100 — Results of assessments of ethical behaviour, governance and other activities;
- 3101 — Evaluation results of specific activities of social responsibility, both successes and failures;
- 3102 — Records of actions on complaints from employees, customers, neighbours, citizens and others;
- 3103 — Records of training;
- 3104 — Employee and customer satisfaction surveys;
- 3105 — Documentation of the public perception of the organization, for example from newspapers and
- 3106 — Results of assessment of compliance with other specifications, codes, guidelines, best practice  
 3107 documents and benchmarks to which the organization subscribes.

3108

3109

3110 **Box 25 Types of review documents**

3111 Depending on the nature and size of an organization, many/[various] types of review documentation  
3112 may be available including:

- 3113 — Data records of key performance indicators (see Clause 7.5.4) measured at regular intervals, for  
3114 example compliance with relevant laws and organizational commitments;
- 3115 — Results of environmental audits;
- 3116 — Results of supply chain audits;
- 3117 — Results of assessments of ethical behaviour, governance and other activities;
- 3118 — Evaluation results of specific activities of social responsibility, both successes and failures;
- 3119 — Records of actions on complaints from employees, customers, neighbours, citizens and others;
- 3120 — [Records of training];
- 3121 — [Records of health?];
- 3122 — Employee and customer satisfaction surveys;
- 3123 — Documentation of the public perception of the organization, for example from newspapers and
- 3124 — Results of assessment of compliance with other specifications, codes, guidelines, best practice  
3125 documents and benchmarks to which the organization subscribes.

3126 **7.8 Enhancing credibility**

3127 *Note to IDTF: Our initial formulation of the title was “Enhancing credibility of an organization’s social*  
3128 *responsibility approach” but after discussion the team decided to call this sub-clause simply*  
3129 *“Enhancing credibility”, much like the stakeholders sub-clause is called simply, “Working with*  
3130 *stakeholders”. However, if the longer version is preferred, the wording “SR approach” is chosen as we*  
3131 *think “approach” is the broadest possible concept, including the organization’s “commitment, strategy,*  
3132 *implementation, monitoring, assessment, reporting, communication and improvement”. It is noted that*  
3133 *French speakers tend to ascribe to “SR Policy” the above meaning, while for Spanish speakers “SR*  
3134 *Policy” is also a narrow concept, limited to “intentions” and not necessarily actions.*

3135 **7.8.1 Key considerations**

3136 ISO 26000 Is not intended for third-party certification

3137 *Note to IDTF: check consistency with lines 244-245: “third party conformity assessment measures”*  
3138 *should be deleted.*

3139 Organizations can, however, enhance the credibility of each element of their social responsibility  
3140 approach by seeking appropriate forms of assurance, that increase confidence of both management  
3141 and the organization’s stakeholders in the data and information that is collated and communicated.  
3142 Assurance can also include the evaluation of the performance achieved by the organization,  
3143 confirming how well the organization implements its overall social responsibility approach and  
3144 enabling the identification of areas for further improvement.

3145 *Note to IDTF: “Assurance” must be added to the definitions — we formulate a proposal in the Help-*  
3146 *Box here.*

3147 As illustrated earlier (*Note to IDTF: This wording assumes that this sub-clause will become 7.8;*  
 3148 *otherwise it will need to be reworded accordingly*) in Clause 7, the elements of the SR approach  
 3149 include the organization's commitments, strategies, objectives, targets, as well as its operations,  
 3150 communication, the processes of stakeholder engagement and the activities of performance  
 3151 assessment.

#### 3152 **HELPBOX: What is Assurance?**

3153 Assurance is an internal or external evaluation that can be directed to the quality of an organization's  
 3154 specified reports, as well as include an evaluation of the organization's actual performance, together  
 3155 with the underlying competencies, systems and processes that enable the organization to fulfil its  
 3156 social responsibility commitments. Assurance also includes the communication of the results of this  
 3157 evaluation to enhance the organization's credibility towards its stakeholders.

### 3158 **7.8.2 Benefit of relationships based on trust**

3159 Demonstrating that socially responsible behavior is integrated into existing organizational systems and  
 3160 actual operations facilitates the process of building relationships based on trust with all the  
 3161 organization's stakeholders. This, in turn, generates positive outcomes in terms of reduced costs (e.g.  
 3162 of negotiations, contracting, complaints and monitoring) and increases the opportunities for mutually  
 3163 beneficial collaboration.

3164 Moreover, the process of obtaining assurance enables organizational learning that facilitates future  
 3165 performance improvements to enhance the organization's SR approach and overall effectiveness, by  
 3166 enhancing its credibility among stakeholders.

### 3167 **7.8.3 Levels and forms of assurance**

3168 Assurance can cover different elements of the SR approach, from the communication (and reporting)  
 3169 to the internal processes and systems that enable the implementation of the SR approach, as well as  
 3170 to the actual results achieved by the organization. Therefore, assurance can be provided at different  
 3171 levels and in different forms, that are not mutually exclusive, but, rather, reinforce each other.

3172 Organizations can seek assurance at different levels, including:

3173 — Data and information communicated (controlling the accuracy);

3174 — Organizational processes (evaluating the reliability); and

3175 — Performance on SR issues (evaluating the quality of achieved performance and identifying areas  
 3176 for improvement).

3177 Assurance also can be obtained in different forms, by engaging with people and organizations  
 3178 providing different skills, competencies and methodologies to meet the specific assurance needs of  
 3179 the organization. Accordingly, assurance can be provided by a wide range of subjects, from internal  
 3180 personnel to professional assurance firms, but also from NGO or SR experts, who bring their specific  
 3181 knowledge and legitimacy on SR issues. Organizations can obtain assurance, for example, by:

3182 — Using internal personnel to conduct audit and other controls;

3183 — Holding open-house events to promote dialogue with external stakeholders and seek their feed-  
 3184 back on the various elements of the organization's SR approach;

3185 — Establishing a stakeholder panel with the task to review specific elements of the organization's SR  
 3186 approach, such as its strategy, targets or performance results;

3187 — Using external audits – both commissioned ('second party audits') and independent ('third party  
 3188 audits') to evaluate specific aspects related to SR, such as workplace conditions;

3189 — Seeking systematic assurance on the organization's reports, underlying systems and actual  
3190 performance from external experts and/or organization(s) who have competencies on social  
3191 responsibility issues and assurance practices.

3192 Each organization should choose the most appropriate level and form of assurance in relation to its  
3193 context, the material issues and the objectives identified in its SR approach.

3194 **BOX of examples – Forms of Assurance**

3195 How to choose the right form of assurance?

3196 EXAMPLE 1 - A European pharmaceutical company

3197 The approach taken by a European medium-size pharmaceutical company to its SR assurance is a  
3198 'modular approach', which can be summarized as follows:

3199 The basic idea is that in SR assurance, different skills and competencies are needed, and different  
3200 organizations can provide the best answer to different questions.

3201 Therefore, the modular approach is articulated as follows:

3202 — When it is about seeking assurance over => we rely on the work of hard DATA and FIGURES  
3203 professional ACCOUNTANTS

3204 — For assurance about social, ethical and we seek dialogue with the environmental ISSUES that are  
3205 crucial => representatives of all in the different business activities relevant STAKEHOLDERS

3206 — When it is about assurance of the => we ask the opinion SYSTEMS concerning the overall  
3207 SR strategy of SR EXPERTS

3208 EXAMPLE 2 - A SMO in Costa Rica

3209 The approach taken by a SMO in Costa Rica to its SR assurance is an 'integrated approach', which  
3210 can be summarized as follows:

3211 The basic idea is that in SR assurance, different skills and entrepreneurial competencies are  
3212 promoted to enhance continuous improvement and an organizational culture.

3213 Therefore, the integrated approach is articulated as follows:

3214 — Acknowledge and integration =>Self assessment report of the SR principles and core issues

3215 — Identification of strengths and =>Second or third party improvements opportunities assessment

3216 — Analyze and prioritize the improvement =>Developing of action opportunities identified plan

3217 **7.8.4 Linkages between ISO26000 and existing SR standards**

3218 The credibility of the type of assurance adopted is further enhanced when it is conducted based on  
3219 established standards in the SR field that are generally accepted for the purpose intended.

3220 Two main different types of standards enhancing the credibility of an organization's SR approach  
3221 exist: general SR standards and specific SR standards. The former take a general approach to SR,  
3222 while the latter are often issue-based (e.g. on working conditions), or focus on one specific activity  
3223 (e.g. the banking sector) or organizational process (e.g. reporting).

3224 General SR standards: SR standards of this nature help organizations to view the wide range of social,  
3225 environmental and ethical issues that are relevant for its overall SR approach, and focus on the

relationships between the organization and all its stakeholders. At the international level, relevant examples of these standards are:

— The UN Global Compact principles: Ten general principles to guide business behavior in the areas of human rights, labor, the environment and anti-corruption;

— The AA1000 Series: Standards providing the basis for improving the sustainability performance of organizations, including a specific assurance standard, AA1000AS, whose core principles of materiality, completeness and responsiveness apply to the overall approach of assurance.

— *Note to IDTF: Other relevant examples?*

Other general SR standards exist at Regional or national level, such as, for example, ValuesManagementSystem in Germany, SD21000 in France, the Q-RES Guidelines in Italy, etc. *(Note to IDTF: these are only a few of the many, many relevant examples that could be done – and it would be nice to have other examples from developing countries. Instead of having a long list here in the text, a further Help-Box could be added here.)*

Specific SR standards: These are standards that, focussing on specific SR issues or processes, enhance the credibility of an organization's SR approach by demonstrating its adoption of practices that are broadly accepted. Therefore, they provide guidance to develop the organization's SR approach and can include external evaluation of the organization's reporting, management systems and actual performance on specific SR issues, such as, for example:

— ISO14000, a series of international standards on environmental management, providing a framework for the development of an environmental management system and the supporting audit program;

— SA8000, helping organizations to manage ethical working conditions throughout global supply chains, and to monitor and improve their actual performance;

— OSHAS 18001, helping organizations to control occupational health and safety risks through monitoring and improving health and safety management systems;

— GRI, Guidelines providing a framework of principles and indicators that organizations can use to measure and report their economic, environmental, and social performance;

— Forest Stewardship Council standards promoting environmentally responsible, socially beneficial and economically viable management of the world's forests;

— *Note to IDTF: Other relevant examples?*

The above list is intended to provide some examples of existing SR standards, and is not to be considered an exhaustive list of SR standards endorsed by ISO26000. There are many other international, regional or national-based SR standards and initiatives that can be usefully applied by organizations in conjunction with ISO26000 as way to enhance the credibility of their SR approach.

*Note to IDTF: Check that reference to ALL THE STANDARDS IN THIS SUB-CLAUSE is in accordance with the criteria developed by the ad hoc task group to refer to international standards and initiatives.*

## **7.8.5 Communicating about SR performance**

Assuring the accuracy, reliability and completeness of communications about social responsibility is important for both public reporting and other forms of communications. For public reporting, an internal and/or external party should review the reported information and the processes used to collect and report it. At the very least, all information covered in the report should be subject to internal assurance by the organization's own personnel, preferably those independent of the people who prepared the report. To further enhance the credibility of the report, an organization may seek

3270 assurance by an independent third party or parties such as external stakeholders. A similar process  
3271 may be followed for assuring the accuracy and reliability of other communications. An organization  
3272 should communicate with stakeholders concerning claims about the social responsibility of activities,  
3273 products and services and these claims should be verified through internal review and assurance. For  
3274 enhanced credibility, these claims may be verified through external assurance.

3275 From this interactive communication, the organization can determine how to continue making  
3276 improvements, and is able to enhance its SR approach and overall effectiveness, and its credibility  
3277 among stakeholders.

## 3278 **7.9 Implementing guidance for small and medium organizations**

### 3279 **7.9.1 Key Considerations**

3280 Small and Medium Organizations play a key role in the societies and economies of every country and  
3281 world region. They often practice Social Responsibility as a part of their owners' and managers' vision  
3282 of their role in the community, and often without putting a formal label on their SR activities. SMOs are  
3283 an important sector for ISO 26000, as their decisions taken collectively can have a great impact on  
3284 sustainable development and the welfare of societies.

3285 Clause 7.X is meant to encourage small and medium organizations to be comfortable with ISO 26000,  
3286 and to understand how to implement the practical guidance of the standard with flexibility according to  
3287 their size and context.

### 3288 **7.9.2 General guidelines for implementation in small and medium organizations**

3289 — According to the typical functioning of small organizations, internal management setup and  
3290 procedures can be flexible and do not need to be formally expressed.

3291 — Organizations are encouraged to prioritize issues according to their nature and size, and  
3292 according to their stakeholders' perceptions. SMOs should consider each of the seven core  
3293 issues (see Clause 7.2, especially Help Box) when planning their Social Responsibility activities,  
3294 but are not under obligation to act on each of those issues

3295 — Collective approach to the implementation is encouraged. Two or more small organizations that  
3296 operate in similar conditions can share resources to implement ISO26000. Even when collective  
3297 actions are carried out by groups of organizations, each of them is individually accountable for its  
3298 actions.

3299 — Collective organizations like trade associations, chambers of commerce, umbrella associations  
3300 (for NGOs) are encouraged to develop their own suggestions for implementation, based on their  
3301 own needs and context.

3302
