

Standard of Japan Electronics and Information Technology  
Industries Association

JEITA CP-3451G

Exchangeable image file format for digital still cameras:  
Exif Version 3.0

This translation has been made based on the original Standard (JETA 3451G).

In the event of any doubts arising as the contents, the original Standard is to be the final authority.

Published on April, 2002

Revised on December, 2024

Prepared by:

AV&IT Standardization Committee

Published by:

Japan Electronics and Information Technology Industries  
Association

Camera & Imaging Products Association (CIPA) and Japan Electronics and Information Technology Industries Association (JEITA) jointly formulated this standard.

The following standards are technically equivalent.

CIPA:

DC-008-2024 Exchangeable image file format for digital still cameras: Exif Version 3.0

JEITA:

CP-3451G Exchangeable image file format for digital still cameras: Exif Version 3.0

**Disclaimer**

1. Neither JEITA nor any of its members shall in any way warrant or take any responsibility for no-infringement of Intellectual Property Rights with respect to the use of JEITA Standards.
2. Neither JEITA nor any of its members shall give any warranty of any kind or take any responsibility for the scope, validity, and essentiality of the Essential Intellectual Property Rights with respect to JEITA Standards.
3. Neither JEITA nor any of its members which are not related to such licensing shall take any responsibility for the terms and conditions of licenses with owners of Intellectual Property Rights, or other licensing negotiations and the results of such negotiations with respect to JEITA Standards.
4. Neither JEITA nor any of its members shall give any warranty of any kind or take any responsibility, either expressed or implied, including warranties of merchantability and fitness for particular purpose, with respect to JEITA Standards.
5. Neither JEITA nor any of its members shall take any responsibility for any damages (meaning all damages including without limitation, loss of business profits, or other incidental or consequential damages) arising out of any use or inability to use the JEITA Standards. The same applies even if either JEITA or its members have been advised of the possibility of such damages.
6. Neither JEITA nor any of its members shall take any responsibility for any disputes that arise at an adopter of JEITA Standards that stem from or are in connection with JEITA standards or the use of JEITA standards.
7. In the event that a statement is not obtained from Sub-Working Group Participant Members to the effect that Essential Intellectual Property Rights are licensed under reasonable (or free) and nondiscriminatory terms, due to believing that Intellectual Property Rights will not be infringed by use of JEITA Standards even after the establishment, addition, or modification of Mandatory Provisions when enacting or revising JEITA Standards, neither JEITA nor any of its members shall give any warranty of any kind that Essential Intellectual Property Rights are not included in the JEITA Standards, and shall not take any responsibility for any disputes that arise as a result of such Intellectual Property Rights being included in the JEITA Standards.

# Introduction

This document is a standard that adds ability to record the case of an image generated by compositing method to “Exchangeable image file format for digital still cameras Exif 2.32” (specifically, CIPA DCG-008-2019 and JEITA CP-3451E; hereinafter called the “Exif Unified Version 2.32”) that was defined by JEITA and CIPA.

The following items were added in this revision:

1. Annotation Data definition and APP11 Marker Segment to store it (Optional)
  - Can record Annotation Data for any region in an image in XML or JSON format.
2. Original Preservation Image (Optional)
  - Can record and retain the original image at the time of capturing even after any post-processing.
3. New Tag Type for UTF-8
  - Can use more diverse characters in tags of character information by adding UTF-8 type as a unique Exif tag type. Since it can be selected and set (used together in a file) with existing ASCII type, it will be backward-compatible with existing devices and software.
4. [Exif IFD] Photographer Information and Software Information related Tags (Optional)
  - Can store individual tags for the Photographer, Image Editor, Camera Firmware, and Editing Software, etc., that could only be described within a single tag of mishmash, such as Artist Tag or Software Tag.

[Supplemental note regarding this corrected edition, 3451G]

In this standard (Version 3.0) which was published in 2023, it was discovered that there were several points to be corrected (errors, insufficient explanations, and ambiguities), and there was concern that those may cause misunderstandings. Therefore, it has corrected limited to the points to be corrected above. Note that there are no changes on the specifications from the 2023 edition, 3451F.

# Revision History

Ver.	Date	Comment
1.0	October 1995	Published First Edition 1.0 <ul style="list-style-type: none"> <li>●Established image data format definitions</li> <li>●Set definitions for structure of attribute information (tags)</li> <li>●Established basic tag definitions</li> </ul>

# 1. Scope

This standard specifies the formats of images, sounds, tags and other metadata that comprise the file for digital still cameras and other systems handling image or sound files recorded by digital still cameras.

Formats specified in this standard are defined as folder structures that are based on Exif-JPEG and recording formats for memory. When formats are used as Exif/DCF files together with the DCF Standard, which guarantees interoperability among devices of different types, their scope shall cover devices, systems, recording media, and application software that handle them. As devices mentioned above, the applicable items are devices with functions such as capturing, generating image data, recording, displaying, editing, and printing images.

Specifically, examples of capture/recording devices include DSCs, DVCs, and camera phones and smartphones, etc. Examples of display/playback devices include PCs (desktop/notebook/tablet), DTVs, and image display device such as digital photo frames and car navigation systems, as well as image storage devices such as picture storages and home servers, and image printing devices such as printers.

Furthermore, applicable items also include AI systems that utilize a significant amount of image data held in these and are being increasingly introduced into various fields and applications.

As application software mentioned above, the applicable items are the software providing functions for editing, displaying, printing and recording metadata as well as importing and editing images.

Specifically considered is application software that edits Exif/DCF tags and then saves them again or application software that adds metadata information undefined in the Exif Standard in Exif/DCF files and then saves it again.

## 2. Definitions

### 2.1. Definition of Terms

<b>DSC</b>	Digital still camera
<b>DVC</b>	Digital video camera
<b>DTV</b>	Digital television
<b>Primary image</b>	The main image data
<b>Thumbnail</b>	A small image used to index the primary image
<b>Compressed data</b>	Data referred to in the JPEG Standard[8] as “entropy coded data”
<b>Tag</b>	A field recording ancillary data about an image. Corresponds to “field” in TIFF
<b>Tag information</b>	A description of the tag contents
<b>Exif</b>	An abbreviation of “Exchange image file format,” used here as the general term for this standard and earlier versions of this standard
<b>DCF</b>	An abbreviation of “Design rule for Camera File System”; it defines folder structures based on Exif-JPEG and formats for recording in memory, and is the camera file system standard that guarantees interoperability among devices of different types.
<b>DCF media</b>	Removable memory recorded in compliance with the DCF or, removable and non-removable memory that a file system can access from an external device through IF (regardless of wired or wireless)
