### Member List of Iron and Steel Division, Technical Committee, FTE Committee

Post	Name	Organization
Advisory Member	MIYATA Takashi	Nagoya University
Technical Committee Chairman	AIHARA Shuji	The University of Tokyo
FTE Chief	HAGIHARA Yukito	Formerly with Sophia University
FTE-WG-R Leader	MINAMI Fumiyoshi	Osaka University
FTE-WG-C&I Leader	TAGAWA Tetsuya	Nagoya University
Secretary (Neutral Member)	YOSHINARI Hitoshi	National Maritime Research Institute
Neutral Member	OHATA Mitsuru	Osaka University
Neutral Member	MOCHIZUKI Masato	Osaka University
Neutral Member	TOYODA Masao	Japan Science and Technology Agency
Neutral Member	GOTOH Koji	Kyushu University
Neutral Member	TOYOSADA Masahiro	Kyushu University
Neutral Member	NAKAGOMI Tadao	Shinshu University
Neutral Member	KAWABATA Tomoya	The University of Tokyo
Neutral Member	SHIBANUMA Kazuki	The University of Tokyo
Neutral Member	NAKAI Hiroaki	The University of Tokyo
Neutral Member	AOKI Mitsuru	The Japan Welding Engineering Society
Neutral Member	KATSUTA Junichi	Nagasaki University
Neutral Member	KITADA Hiroshige	Nippon Kaiji Kyokai
Neutral Member	YAMAMOTO Norio	Nippon Kaiji Kyokai
Neutral Member	MIMURA Hiroshi	Formerly with Yokohama National University
Member	YAMASHITA Yoichi	IHI Corporation
Member	YAMADA Takehisa	IHI Corporation
Member	YAMASHITA Maki	Osaka Gas Co., Ltd.
Member	NISHIKAWA Hiroyasu	Kawasaki Heavy Industries, Ltd.
Member	KIUCHI Akira	Kobelco Research Institute
Member	MITSUYA Masaki	Tokyo Gas Co., Ltd.
Member	ITATANI Masao	Toshiba Corporation Power Systems Company
Member	HIRAI Shuichi	Toyo Kanetsu K. K.
Member	UNO Yoshiaki	JGC Corporation
Member	KOBAYASHI Junichi	Nippon Steel & Sumikin Technology Co., Ltd
Member	MURAI Ryosuke	Mitsubishi Heavy Industries, Ltd.
Member	YAGI Nobuyori	Mitsubishi Heavy Industries, Ltd.
Member	ICHIMIYA Mitsuru	Yokogawa Bridge Corporation
Member (Steel Manufacturer)	IMAMURA Hiroki	Kobe Steel, Ltd.
Member (Steel Manufacturer)	IGI Satoshi	JFE Steel Corporation
Member (Steel Manufacturer)	SHIMANUKI Hiroshi	Nippon Steel & Sumitomo Metal Corporation
Member (Steel Manufacturer)	KOEDA Hideo	The Japan Steel Works, Ltd.
Chief Secretary, Headquarter Secretary Committee	SHIWAKU Toyoaki	Kobe Steel, Ltd.
Vice-Chief Secretary, Headquarter	NISHIMURA Kimihiro	JFE Steel Corporation
Secretary, Headquarter	IKI Hiroshi	Nippon Steel & Sumitomo Metal Corporation
Secretariat	SHIRAKURA Toshiya	The Japan Welding Engineering Society
Secretariat	KIGUCHI Akihiro	The Japan Welding Engineering Society
Secretariat	KANEKO Kayoko	The Japan Welding Engineering Society

**Member List of Iron and Steel Division, Technical Committee, FTE Committee, Working group C**

## Welding Engineering Standard

# Standard test method for crack-tip opening displacement (CTOD) fracture toughness measurement

### Introduction

This standard specifies the fracture mechanics test method for evaluating the fracture toughness of metallic material using the crack-tip opening displacement (CTOD). The first edition published in 1995 used a CTOD calculation formula based on a geometric plastic hinge model as in **BS 7448 Part 1**. Considering the plastic deformation property of material in the CTOD calculation, the standard was revised to improve the accuracy of evaluation.

### 1. Scope

This test method uses a fatigue precracked specimen to determine the fracture toughness of metallic material at the initiation of unstable fracture. Two types of unstable fracture exist depending on material and test temperature. In one type, the unstable crack starts directly from the fatigue precrack tip. In the other type, it starts from the tip of ductile crack which has developed stably from the fatigue precrack tip. The start of ductile crack is out of the scope of this standard.

The formula for calculating the critical CTOD used in this test method is applicable to the material with the yield ratio,  $R_Y$ , in the range of 0.6 to 0.98 and the specimen thickness,  $B$ , in the range of 10 to 200 mm.

The CTOD value at the initiation of unstable fracture determined by this test method ( $\delta_c$  or  $\delta_u$  among the critical CTOD) can be used in the safety assessment of structural element as in **WES 2805** or in the evaluation for material selection.

The critical CTOD value determined by this test method is an index for characterizing the fracture behavior of metallic material. It should be noted, however, that this test method cannot be applied to the macroscopically inhomogeneous material such as weld just as it is. **WES 1109** describes a method to deal with such a case.

In the materials with high ductility and toughness, unstable fracture does not occur in most cases and only the CTOD at the maximum load can be determined. This type of critical CTOD ( $\delta_m$ ) cannot be a toughness index for unstable fracture.

### 2. Normative References

The standards listed below contain the provisions which, through reference in this standard, constitute the provisions of this standard. If the indication of year is given to the referred standard, only the edition of the indicated year applies, but the revision or amendment made thereafter does not. If the indication of year is not given to the referred standard, only the latest edition or amendment applies.

**JIS B 7728** Calibration of force-proving instruments used for the verification of uniaxial testing machines
