

THE JAPAN IRON AND STEEL FEDERATION STANDARD

Cold-rolled steel sheet and strip  
for automobile use

JFS A 2001:2025

Translated and Published  
by

THE JAPAN IRON AND STEEL FEDERATION

## Preface

The Japan Iron and Steel Federation is engaged in preparation of draft Japanese Industrial Standards (JIS) for iron and steel materials and products, internal deliberation of International Standards, and establishment of the Japan Iron and steel Federation Standards (JFS).

The draft in the Japanese language of this standard was prepared by the Standards Committee for Steel Products of the Japan Iron and Steel Federation, with the cooperation of the material Committee of Japan Automobile manufacturers Association, then deliberated and approved by the Standards Committee which consists of manufacturers, users and authorities on steel sheets for automobile use. Following the procedure under the WTO/TBT agreement, after a disclosure period of 60 days, it has been published as a standard.

The Japanese version is the official version of this standard, and the English version is a translation from the Japanese version and is prepared for the convenience of those who use any other language than Japanese, so any ultimate reference should be made to the Japanese version.

For the standards that are referred to this standard, such as JFS, JIS and ISO, users of this standard are encouraged to use the latest edition of the respective standards.

# The Japan Iron and Steel Federation Standard

JFS  
A 2001: 2025

## Cold-rolled steel sheet and strip for automobile use

### Foreword

In the field of steel sheet and strip for automobile use, the requirements for the material were becoming advanced and with wider divergence, which resulted in a large number of specifications in this field. For the convenience of the interested parties, the studies for summarizing these specifications to develop unified standards were carried out by the Japan Iron and Steel Federation. As a result of the studies, the Japan Iron and Steel Federation Standards for Automobile Use, which contain this standard **JFS A 2001**, were established in 1996. After the establishment, the revisions of the Japan Iron and Steel Federation Standards were made in 1998, 2008, 2012, 2014, 2016 and 2020. In 2025, **JFS A 2001** has been revised again so as to add new terms and definitions to the terminology clause, as well as to ensure harmonization with Japanese Industrial Standards (**JISs**) of steel sheet and strip, and coating.

### 1 Scope

This standard applies to cold-rolled steel sheet and strip for automobile use that are mainly temper rolled (hereinafter referred to as steel sheet and strip).

### 2 Normative references

Part or all of the provisions of the following standards, through reference in this text, constitute provisions of this standard. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

**JIS B 0601**: 2013, Geometrical Product Specifications (GPS) — Surface texture: Profile method — Terms, definitions and surface texture parameters

**JIS G 0201**, Glossary of terms used in iron and steel (Heat treatment)

**JIS G 0202**, Glossary of terms used in iron and steel (Testing)

**JIS G 0203**, Glossary of terms used in iron and steel (Products and quality)

**JIS G 0320**, Standard test method for heat analysis of steel products

**JIS G 0404**, Steel and steel products — General technical delivery requirements

**JIS G 0415**, Steel and steel products — Inspection documents

**JIS G 0416**, Steel and steel products — Location and preparation of samples and test pieces for mechanical testing
