Prestressed concrete sleepers— Pretensioning type

ICS 45.080

Descriptors : sleepers, pretensioned prestressed concrete, prestressed concrete, railway track

Reference number : **JIS E 1201 : 1997 (E)**

Foreword

This translation has been made based on the original Japanese Industrial Standard revised by the Minister of International Trade and Industry through deliberations at the Japanese Industrial Standards Committee in accordance with the Industrial Standardization Law. Consequently **JIS E 1201 : 1990** is replaced with **JIS E 1201 : 1997**.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have technical properties. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have the said technical properties.

Date of Establishment: 1990-02-01

Date of Revision: 1997-11-20

Date of Reaffirmation: 2003-01-20

Prestressed concrete sleepers— Pretensioning type

1 Scope This Japanese Industrial Standard specifies sleepers, of a type introducing compressive force into concrete by using prestressing steel strands, to be used for railways (hereafter referred to as “sleepers”).

Remarks : The normative references to this Standard are listed in Attached Table 1.

2 Classification Sleepers shall be classified by the shape as shown in Table 1.

Table 1 Classification

Classification	Symbol	Use	Shape
No. 3	3PR	1 067 mm gauge	Attached Fig. 1
No. 6	6PR		Attached Fig. 2
No. 7	7PR		Attached Fig. 3
For cable protection	CPR		Attached Fig. 4
For joint	JPR		Attached Fig. 5
For special section	SPR		Attached Fig. 6
3T	3T	For standard gauge	Attached Fig. 7
3H	3H		Attached Fig. 8

3 Performance

3.1 Bending strength of sleepers The bending strength of sleepers shall be as follows:

- (1) A sleeper, when it is subjected to the proof bending force given in Table 2 by the test method of 8.1 (1), shall not cause crazing.
- (2) For a sleeper, the load at which it is broken by the test method of 8.2 (1) shall exceed the destructive bending force given in Table 2.
