Foreword

This Japanese Industrial Standard has been revised by the Minister of Economy, Trade and Industry based on the provision of Article 14, paragraph (1) of the Industrial Standardization Act applied mutatis mutandis pursuant to the provision of Article 16 of the said Act in response to a proposal for revision of Japanese Industrial Standard with a draft being attached, submitted by The Japan Iron and Steel Federation (JISF), an accredited standards development organization. This edition replaces the previous edition (**JIS G 3140** : 2021), which has been technically revised.

However, **JIS G 3140** : 2021 may be applied in the **JIS** mark certification based on the relevant provisions of Article 30, paragraph (1), etc. of the Industrial Standardization Act until 21 May 2024.

This **JIS** document is protected by the Copyright Act.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, published patent application or utility model rights. The relevant Minister is not responsible for identifying any of such patent rights, published patent application or utility model rights.

Higher yield strength steel plates for bridges

Introduction

This Japanese Industrial Standard has been prepared based on **ISO 630-1** : 2021 (Edition 2), **ISO 630-4** : 2021 (Edition 2), and **ISO 630-5** : 2014 (Edition 1), with some modifications of the technical contents.

Annex JA and Annex JB are unique to **JIS** and not given in the corresponding International Standards. The vertical lines on both sides and dotted underlines indicate changes from the corresponding International Standard. A list of modifications with the explanations is given in Annex JC.

1 Scope

This Standard specifies requirements for the hot-rolled steel plates and hot-rolled atmospheric corrosion resisting steel plates (hereafter referred to as steel plates) having high yield point or proof stress to be mainly used for bridges, that are imparted with characteristically excellent weldability.

NOTE The International Standards corresponding to this Standard and the symbol of degree of correspondence are as follows.

ISO 630-1 : 2021 *Structural steels — Part 1 : General technical delivery conditions for hot-rolled products*

ISO 630-4 : 2021 *Structural steels — Part 4 : Technical delivery conditions for high yield strength quenched and tempered structural steel plates and wide flats*

ISO 630-5 : 2014 *Structural steels — Part 5 : Technical delivery conditions for structural steels with improved atmospheric corrosion resistance* (Overall evaluation : MOD)

In addition, symbols which denote the degree of correspondence in the contents between the relevant International Standards and **JIS** are IDT (identical), MOD (modified), and NEQ (not equivalent) according to **ISO/IEC Guide 21-1**.

2 Normative references

Part or all of the provisions of the following standards, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated below shall be applied.

JIS G 0201 *Glossary of terms used in iron and steel (Heat treatment)*

JIS G 0202 *Glossary of terms used in iron and steel (Testing)*

JIS G 0203 *Glossary of terms used in iron and steel (Products and quality)*

JIS G 0320 *Standard test method for heat analysis of steel products*
