## Foreword

This translation has been made based on the original Japanese Industrial Standard revised by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee as the result of proposal for revision of Japanese Industrial Standard submitted by The Japan Titanium Society (JTS)/Japanese Standards Association (JSA) with the draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law applicable to the case of revision by the provision of Article 14.

Consequently **JIS H 4650**:2012 is replaced with this Standard.

This **JIS** document is protected by the Copyright Law.

It should be noted that being in conformance with this Standard may come under the use of the patent rights held by the following:

Patent registration number	Title of invention	Patent holder	Expiration date
3916088	Titanium alloy for corrosion-resistant material	NIPPON STEEL & SUMITOMO METAL CORPORATION	2025-12-28
3967515	Titanium alloy material for muffler and muffler	Kobe Steel, Ltd.	2020-02-16
4125560	Titanium alloy superior in hydrogen absorption resistance	Kobe Steel, Ltd.	2022-08-07

The relevant holders of the above-mentioned patent rights have indicated to the Japanese Industrial Standards Committee an intention of granting license to anyone under the nondiscriminatory and reasonable conditions, except to the other relevant holders of the patent rights related to this Standard who will not grant their licenses under the same conditions.

It should be noted that following this Standard does not always refer to granting a free license.

There is a possibility that some parts of this Standard may conflict with patent rights other than mentioned above. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, applications for a patent after opening to the public or utility model rights.

The “patent rights” as mentioned here include patent right, application for a patent after opening to the public or utility model right.

# Titanium and titanium alloys—Bars

## 1 Scope

This Japanese Industrial Standard specifies bars of titanium and titanium alloys (hereafter referred to as “bars”). It is applicable to bars with square, rectangular and regular hexagonal sections as well as those with circular section. Bars with rectangular section, to which this Standard applies, have a thickness exceeding one-tenth of the width.

## 2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated below shall be applied.

JIS H 0321 *General rules for inspection of non-ferrous metal materials*

JIS H 1610 *Titanium and titanium alloys—Sampling methods*

JIS H 1612 *Methods for determination of nitrogen in titanium and titanium alloys*

JIS H 1614 *Methods for determination of iron in titanium and titanium alloys*

JIS H 1617 *Methods for determination of carbon in titanium and titanium alloys*

JIS H 1619 *Titanium and titanium alloys—Determination of hydrogen content*

JIS H 1620 *Methods for determination of oxygen in titanium and titanium alloys*

JIS H 1621 *Methods for determination of palladium in titanium alloys*

JIS H 1622 *Titanium alloys—Methods for determination of aluminium*

JIS H 1624 *Titanium alloys—Method for determination of vanadium*

JIS H 1625 *Titanium alloy—Method for determination of lanthanum, cerium, praseodymium and neodymium*

JIS H 1626 *Titanium alloys—Methods for determination of sulfur*

JIS H 1630 *Method for atomic emission spectrometric analysis of titanium*

JIS H 1631 *Titanium alloys—Method for X-ray fluorescence spectrometric analysis*

JIS H 1632-2 *Titanium—ICP atomic emission spectrometry—Part 2: Determination of palladium, manganese, iron, magnesium, silicon, aluminium, vanadium, nickel, chromium, tin, copper, molybdenum, zirconium, niobium, tantalum, cobalt and yttrium*
