Foreword

This Japanese Industrial Standard has been established by the Minister of Economy, Trade and Industry, through deliberations at the Japanese Industrial Standards Committee in accordance with the Industrial Standardization Act.

This **JIS** document is protected by the Copyright Act.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, published patent application or utility model rights. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, published patent application or utility model rights.

JIS K 0102 series consists of the following 5 parts under the general title *Testing methods for industrial water and industrial wastewater*:

Part 1: Test methods for general physics and chemistries

Part 2 : Inorganic anions, ammonium ion, organic nitrogen, total nitrogen and total phosphorus

Part 3 : Metals

Part 4: Organic substances (to be published)

Part 5 : Microorganisms and biological effect (to be published)

Blank

Testing methods for industrial water and industrial wastewater — Part 4: Organic substances

1. Scope

This Japanese Industrial Standard specifies the test methods for organic substances in industrial water and in industrial wastewater discharged from factories including places of business (hereafter referred to as industrial wastewater). Unless otherwise stated in the individual test clauses, the tests shall apply to both industrial water and industrial wastewater.

For test methods in this Standard for which a corresponding International Standard(s) exists, the number of the International Standard and the symbol of degree of its correspondence with **JIS** are shown in relevant test clauses.

Where modifications have been made from the technical contents of the corresponding International Standard, the modifications and their explanations are given in Annex G.

2. Normative references

Part or all of the provisions of the standards listed in Annex F, through reference in this text, constitute provisions of this Standard. The most recent editions of the standards (including amendments) indicated in Annex F shall be applied.

3 Terms and definitions

For the purpose of this Standard, the terms and definitions given in **JIS K 0211** and **JIS K 0215** apply.

4 General requirements

4.1 Chemical analysis

General requirements of chemical analysis are provided in JIS K 0050.

4.2 Absorptiometry

4.2.1 General

General requirements of absorptiometry are provided in JIS K 0115.

4.2.2 Measurement of absorbance

Unless otherwise stated, an absorption cell of 10 mm optical path length shall be used.

4.3 Flow analysis

General requirements of flow analysis are provided in JIS K 0126.

4.4 Atomic absorption spectrometry

General requirements of atomic absorption spectrometry are provided in JIS K 0121.

4.5 Gas chromatography
