Foreword

This Japanese Industrial Standard has been established by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee according to the proposal for establishment of Japanese Industrial Standard submitted by Japanese Society for Quality Control (JSQC)/Japanese Standards Association (JSA) with the draft prepared from the association standard (JSQC-Std 32-001:2013) being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law.

This **JIS** document is protected by the Copyright Law.

Attention is drawn to the possibility that some parts of this Standard may conflict with patent rights, applications for a patent after opening to the public or utility model rights. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying any of such patent rights, applications for a patent after opening to the public or utility model rights.

Performance improvement of management systems — Guidelines for Daily Management

JIS Q 9026: 2016

0 Introduction

0.1 General

Even if attractive new products/services are planned and designed with the understanding of needs of customers and society, it will be impossible to beat competitors if those products and services are not manufactured and provided as planned and designed. It is often said in the world of quality management, "Quality is achieved through the process." This is the simple expression to show that establishing and following the process is a better way than inspecting and verifying the finished products in order to economically produce the planned products/services.

However in large organizations, it is often the case that an important part of the process is unclear, or even if the process is well-established, the work is not performed according to it. The process, therefore, will most likely not achieve the planned performance under such a situation. "Daily management" is the methodology devised to deal with this problem. Daily management is the foundation of organizational management, and its quality significantly affects the profitability of the organization. Daily management, therefore, should be thoroughly implemented and enhanced in all job units and hierarchies of the organization.

This Standard consists of the fundamentals of daily management, guidelines to implement daily management and guidelines to promote daily management throughout an organization.

No corresponding International Standard has been established at this point.

0.2 Consistency with other standards

This Standard is designed with the aim of daily management for the performance improvement of a management system and intended to be used independently; however, this Standard may be used with consistent group of such standards as JIS Q 9023 for policy management, JIS Q 9024 for improvement activity, and JIS Q 9025 for quality ensurance to complement each other.

Annex A shows the role of daily management, policy management, improvement activity and quality ensurance. Also, this Standard is designed to be used as a supporting technique for the quality management specified in **JIS Q 9005**.

0.3 Relation between JIS Q 9001 and JIS Q 9004

This Standard is designed to be used as a supporting technique for an organization to effectively and efficiently operate the management system on the basis of **JIS Q** 9001 and **JIS Q** 9004.
